UNITED STATES PATENT OFFICE.

AUGUST SEBELIN, OF KIEL, GERMANY.

GLOVE-FASTENER.

SPECIFICATION forming part of Letters Patent No. 583,694, dated June 1, 1897.

Application filed August 4, 1896. Serial No. 601,638. (No model.)

To all whom it may concern:

Be it known that I, AUGUST SEBELIN, gentleman, a citizen of the Empire of Germany, and a resident of 83 Niemannsweg, Kiel, Germany, have invented certain new and useful Improvements in Glove-Fasteners, of which the following is a specification.

The subject of the present invention is a novelty which affords a suitable and practical improvement in glove-fasteners of the well-known kind. With these fasteners the fastening has heretofore been effected by causing one glove-flap to overlap the other, whereas according to the present invention the fastening cap or clip is arranged so as to project beyond its flap and is jointed by means of a hinge.

The new fastener is represented in the accompanying drawings.

It will be seen from Figures 1, 2, and 3, which are respectively front part sectional elevation, plan, and plan *in situ*, respectively, that the cap *k* is jointed by a hinge *s* to the part *t*, in order that on being pressed upon the spring-button *f* the glove may be fastened, the part *t* being secured to one glove-flap and the spring-button *f* to the other.

For the sake of symmetry the part *t* is exactly of the same shape as the cap *k*, and the fastening of this part may also be effected in such a manner that it forms at the same time a cap and is pressed upon a spring-head. This has the advantage that the glove may conveniently be opened to one or the other side.

By such means I am enabled to produce a fastening that is at once neat and effective and which is easy of manipulation.

Having now particularly described and ascertained the nature of my said invention and in what manner the same is to be performed, I declare that what I claim is—

In combination, the spring-catches on the glove and the caps having sockets to engage the same, said caps being hinged together, substantially as described.

In witness whereof I have hereunto set my hand in presence of two witnesses.

AUGUST SEBELIN.
