(54) Title: REPLACEABLE CALF SUPPORT (HIGHBACK)

(57) Abstract: The present invention is based on known types of bindings, where it is provided a binding (1) which can be used without a detachable calf support (6) while retaining the ability of the binding (1) to position the boot correctly in the binding (1). The fundamental principle is that one makes a detachable calf support (6) which can easily be removed and adjusted, whereupon the binding (1) will still be able to position the boot correctly in the binding (1) without being adjusted forwards or backwards in any direction on the snowboard. The device preferably permits the detachable calf support (6) to be removed and replaced again without the use of tools. The invention also offers the opportunity of using different intermediate types of calf support (6).

* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
