Abstract:
The use of sGC stimulators, sGC activators alone, or in combination with PDE5 inhibitors for the prevention and treatment of fibrotic diseases, such as systemic sclerosis, scleroderma, and the concomitant fibrosis of internal organs.
The use of sGC stimulators, sGC activators, alone and combinations with PDE5 inhibitors for the treatment of systemic sclerosis (SSc).

The use of sGC stimulators, sGC activators alone, or in combination with PDE5 inhibitors for the prevention and treatment of fibrotic diseases, such as systemic sclerosis, scleroderma, and the concomitant fibrosis of internal organs.

Background of the invention

Systemic Sclerosis

The pathogenesis of Systemic Sclerosis (SSc) is still unclear and remains elusive. However, scleroderma is a non-inherited, noninfectious disease and thought to be an autoimmune disease. SSc has a broad variety of symptoms triggered by excessive deposition of extracellular matrix in the dermis resulting in skin fibrosis. In later stages SSc is characterized by progressive tissue fibrosis affecting other internal organs as the gut, the lung or the kidneys. Therefore scleroderma is the hallmark of the disease comprising also e.g. lung fibrosis, renal fibrosis, fibrosis of the heart, the gut or the blood vessels. It is suggested that inflammation, autoimmune disorders or vascular damage activates fibroblasts. Fibroproliferation is accompanied by excessive extracellular matrix production, dominated by Collagen type I resulting in progressive tissue fibrosis which can cause end organ failure and lead to high morbidity and mortality in patients with end-stage SSc (Harris et al. 2005 - Kelley's Textbook of Rheumatology 7th edition. Elsevier Saunders, Philadelphia PA).

There is still no causative treatment for Systemic Sclerosis (SSc) available and the current therapy is based on suppression of the immune system via corticosteroids, cyclophosphamide, methotrexate. More recently kinase inhibitors are under investigation as immunosuppressant and antifibrotic agents in SSc, but tolerability is limited in SSc patients (Khanna and Denton 2010 - Best. Pract. Res. Clin. Rheumatol. 24:387-400, Ong and Denton 2010 - Curr. Opin. Rheumatol. 22:264-272, Spiera 2011 - Ann. Rheum. Dis. Epub Mar 2011). These therapies either used as stand alone treatment or combined are of limited efficacy and exhibited considerable side effects. Therefore alternative treatment options in SSc which are efficacious and safe are urgently needed.

Antifibrotic effects of cGMP:

The cyclic nucleotides, cyclic adenosine monophosphate (cAMP) and cyclic guanosine monophosphate (cGMP), were discovered decades ago and represent one of the most important second messenger pathway within cells. It is well established that the regulation of intra-cellular cGMP pools have substantial impact on physiology, and pathophysiology and is one basic principle of pharmacological intervention (Evgenov et al. 2006 - Nat. Rev. Drug. Discov.
Besides the treatment of cardiovascular, lung or CNS-disorders there is ample evidence that an increase in cGMP is a very effective treatment option for urological disorders as well (Sandner et al. 2009 - Handbook Exper. Pharmacol. 191:507-531). PDE5 inhibitors are the gold-standard for the treatment of erectile dysfunction (ED) but it was shown that PDE5 inhibitors could be useful for the treatment of symptomatic BPH which is characterized by Overactive Bladder (OAB) and Lower Urinary Tract Symptoms (LUTS) (Porst et al. 2008 - Curr. Urol. Rep. 9:295-301; McVary et al. 2007 - J. Urol. 177:1071-1077, J Urol. 177:1401-1407, Kaplan and Gonzalez. 2007 - Rev. Urol. 9:73-77). The antifibrotic effects of Vardenafil, sGC stimulators and sGC activators is not understood yet. There are some descriptions about antifibrotic effects of Nitric-Oxide which are presumably mediated by cGMP in other organs and PDE5 inhibitors or guanylate cyclase stimulators have shown efficacy in penile fibrosis (Peyronie's disease) (Ferrini et al. 2006 - B. J. Urol. 97:625-633) and liver fibrosis (Knorr et al. 2008 - Arzneimittelforschung 58:71-80) respectively.

It is not known if the NO/cGMP system is involved in SSc and if cGMP increase provides a treatment option for this disease. We hypothetized that - independent from endogenous NO/cGMP production - sGC stimulators and activators might be an effective treatment option for Systemic Sclerosis (SSc).

We therefore investigated sGC stimulators and sGC activators, i.e. example 27 according to compound of the formula

![Chemical Structure](image)

and combinations with PDE5 inhibitors thereof in vitro and in vivo in animal models for SSc. The in vivo experiments are including studies in bleomycin-induced skin and lung fibrosis in mice and
studies on skin fibrosis in TSK-mice. In addition, the dose range tested on antifibrotic potential was also analyzed in mice with telemetric implants for blood-pressure and heart rate analysis.

We found in vivo in our animal models that:

- sGC stimulators or sGC activators, i.e. example 27, example 3, example 6, significantly reduced dermal thickness, hydroxyproline content of the skin and the number of dermal myofibroblasts in bleomycin-induced SSc in mice when administered in a preventive dose-regimen. (Example A: Table 1, Table 2). These data suggest an antifibrotic effect in Systemic Sclerosis when these compounds are given preventively.

- sGC stimulators or sGC activators, i.e. example 27 significantly reduced dermal thickness, hydroxyproline content of the skin and the number of dermal myofibroblasts in bleomycin-induced SSc in mice when administered in a therapeutic dose-regimen after established fibrosis. (Example B: Table 3). These data suggest an antifibrotic effect and regression of established fibrosis in Systemic Sclerosis when the compounds are given therapeutically.

- sGC stimulators or sGC activators, i.e. example 27 significantly reduced dermal thickness, hydroxyproline content of the skin and the number of dermal myofibroblasts in TSK mice. Since TSK mice already exhibited established fibrosis before start of the treatment example 27 caused fibrosis-regression (Example C: Table 4). These data suggest an antifibrotic effect and regression of established fibrosis in Systemic Sclerosis when the compounds are given therapeutically.

- sGC stimulators of sGC activators, i.e. example 27, example 3, example 4, example 6 were investigated in conscious mice with telemetric implants and blood pressure and heart rate was monitored (Example D). Example 27, example 3, example 4, example 7 did not or only moderately, change the heamodynamic profile of the mice in dosages with antifibrotic properties (Example D: Figures 1, 2A, 2B, 3A, 3B, 4A, 4B). These data suggest a direct antifibrotic mode of action of sGC stimulators and sGC activators independent of blood pressure reduction by these compounds.

- sGC stimulators or sGC activators, i.e. example 27, alone and in combination with PDE5 inhibitors (i.e. Vardenafil) blocked TGF-induced collagen gene expression in vitro in human dermal fibroblasts(Example E). These data suggest a direct antifibrotic effect on the level of collagen production

Thus, we found completely unexpected and for the first time that sGC stimulators or sGC activators i.e. example 27, prevent fibrosis and regress established fibrosis in different animal models of
inflammatory and non-inflammatory SSc including bleomycin-induced fibrosis models and the TSK-mouse model.

In addition there was no significant effect seen on systemic blood pressure which for the first time shows that these sGC stimulators have direct antifibrotic properties in SSc independent from blood pressure reduction.

Moreover sGC stimulators and sGC activators could block TGF-beta induce collagen synthesis implying a broad antifibrotic effect in other fibrotic disorders beyond SSc.

Taken together this data indicate for the first time that sGC stimulators and sGC activators, i.e. Example 27, example 3, example 4, example 6 could represent a future treatment option for SSc.
Disclosure of the invention

Fibrotic disorders addressed by therapeutic agents of the invention which in particular and with substantial advantage can be treated by the above mentioned sGC stimulators or sGC activators alone or in combination with PDE5 inhibitors comprise but are not limited to Systemic Sclerosis (SSc), Systemic Sclerosis (SSc) concomitant fibrosis and fibrotic diseases.

Systemic Sclerosis (SSc) refers to but is not limited to diffuse Systemic Sclerosis (dSSc), limited Systemic Sclerosis (ISSc), overlap type of Systemic Sclerosis, undifferentiated type of Systemic Sclerosis, Systemic Sclerosis sine scleroderma, skin fibrosis, scleroderma, nephrogenic fibrosing dermopathy (NFD), nephrogenic systemic fibrosis (NSF), keloid formation.

SSc concomitant fibrosis refers to fibrosis of internal organs, comprising but not limited to the gut, the lung, the kidney and the blood vessels.

Fibrotic diseases comprises but are not limited to a condition in which collagen excess - independent of the etiology i.e. autoimmune disorders, radiation therapy, intoxications, diabetes, surgery - lead to fibrosis of the skin, gut, liver, lung, heart, bladder, prostate, blood vessels or any other localized or generalized fibrotic condition in tissues.

A preferred embodiment of the invention is compounds according to formulae (1)-(27) for the prevention and treatment of fibrotic diseases, such as systemic sclerosis, scleroderma, and the concomitant fibrosis of internal organs, as shown below:

- 2-[1-(2-Fluorobenzyl)-1H-pyrazolo[3,4-b]pyridine-3-yl]-5-(4-morpholinyl)-4,6-pyrimidine-diamine (1), disclosed as example 16 in WO 00/06569,
- 2-[1-(2-Fluorobenzyl)-1H-pyrazolo[3,4-b]pyridine-3-yl]-5-(4-pyridinyl)-4-pyrimidineamine (2), disclosed as example 1 in WO 02/42301,
- Methyl-4,6-diamino-2-[1-(2-fluorobenzyl)-1H-pyrazolo[3,4-b]pyridine-3-yl]-5-pyrimidinyl-(methyl)carbamate (3), disclosed as example 8 in WO 03/095451,
- Methyl-4,6-diamino-2-[1-(2-fluorobenzyl)-1H-pyrazolo[3,4-b]pyridine-3-yl]-5-pyrimidinyl-carbamate (4), disclosed as example 5 in WO 03/095451
- 4-(((4-carboxybutyl)2-(2-[[4-(2-phenylethyl)benzyl]oxy]phenyl)ethyl]amino)methyl)carboxylic acid (5), disclosed as example 8a in WO 01/019780,
- Methyl- 4,6-diamino-2-[5-fluoro-l-(2-fluorobenzyl)-1H-pyrazolo[3,4-b]pyridine-3-
Methyl-\{4,6-diamino-2-[5-fluoro-1-(2-fluorobenzyl)-1H-pyrazolo[3,4-b]pyridine-3-yl]pyrimidine-5-yl\}methylcarbamate (6),

- Methyl-\{4,6-diamino-2-[5-fluoro-1-(2-fluorobenzyl)-1H-pyrazolo[3,4-b]pyridine-3-yl]pyrimidine-5-yl\} (2,2,2-trifluorethyl)carbamate (8),

- 5-Chloro-2-(5-chlorothiophene-2-sulfonylamino-N-(4-(morpholine-4-sulfonyl)-phenyl)-benzamid as sodium salt (9), disclosed in WO00/02851,

- 2-(4-Chloro-phenylsulfonylamino)-4,5-dimethoxy-N-(4-(thiomorpholine-4-sulfonyl)-phenyl)-benzamide (10), disclosed in WO00/02851,

- 1-\{6-[5-Chloro-2-((4-trans-4-trifluoromethyl)cyclohexyl)benzyl] oxyphenyl\}pyridine-2-yl\}-5-(trifluoromethyl)-1H-pyrazol-4-carboxylic acid (11), disclosed in WO 2009/032249,

- 1-(6-(2-(2-Methyl-4-(4-trifluoromethoxyphenyl)benzyloxy)-phenyl)pyridine-2-yl)-5-trifluoromethyl-pyrazol-4-carboxylic acid (12), disclosed in WO 2009/071504,

- 1\-(6-(3,4-dichlorophenyl)-2-pyridinyl\)-5-(trifluoromethyl)-1H-pyrazole-4-carboxylic acid (13), disclosed in WO 2009/068652,

- 1\-(2-[3-Chlor-5-(trifluoromethyl)phenyl]-5-methyl-1,3-thiazole-4-yl) methyl]-1H-pyrazole-4-carboxylic acid (14), 4-(2-[3-(Trifluoromethyl)phenyl]-1,3-thiazole-4-yl)methyl)benzoic acid (15) and 1\-(2-[2-Fluoro-3-(trifluoromethyl)phenyl]-5-methyl-1,3-thiazole-4-yl)methyl]-1H-pyrazole-4-carboxylic acid (16) disclosed in WO 2009/123316,

- 4-Amino-2-[5-chloro-3(3,3,3-trifluoropropyl)-1H-indazol-yl]-5,5-dimethyl-5,7-dihydro-6H-pyrrolo[2,3-d]pyrimidine-6-one (17), 4-Amino-2-\{5-chloro-3-(2,3,6-trifluorobenzyle)-1H-indazol-yl\}-5,5-dimethyl-5,7-dihydro-6H-pyrrolo[2,3-d]pyrimidine-6-one (18), 4-Amino-5,5-dimethyl-2-[3-(2,3,6-trifluorobenzyle) 1H-thieno[3,4-c]pyrazol-1-yl]-5,7-dihydro-6H-pyrrolo[2,3-d]pyrimidine-6-one (19), 4-Amino-5,5-dimethyl-2-[3-(2,3,6-trifluorobenzyle)-1H-thieno[2,3-d]pyrazole-1-yl]-5,5-dimethyl-5,7-dihydro-6H-pyrrolo[2,3-d]pyrimidine-6-one (20), 4-Amino-5,5-dimethyl-2-[7-(2,3,6-trifluorobenzyle)imidazo[1,5-b]pyridazine-5-yl]-5,7-dihydro-6H-pyrrolo[2,3-d]pyrimidine-6-one (21), 4-Amino-2-[6-chloro-3-(2,3,6-trifluorobenzyle)imidazo[1,5-a]pyridine-1-yl]-5,5-dimethyl-5,7-dihydro-6H-pyrrolo[2,3-d]pyrimidine-6-one (22), 4-Amino-2-[6-fluoro-3-(2,3,6-trifluorobenzyle)imidazo[1,5-a]pyridine-1-yl]-5,5-dimethyl-5,7-dihydro-6H-pyrrolo[2,3-d]pyrimidine-6-one (23), 4-Amino-2-[6-fluoro-3-(2,3,6-trifluorobenzyle)6-fluorimidazo[1,5-a]pyridine-1-yl]-5,5-dimethyl-5,7-
dihydro-6H-pyrrolo[2,3-d]pyrimidine-6-one (24), 4-Amino-5,5-dimethyl-2-[3-(2,4,6-trifluorobenzyle)imidazo[1,5-a]pyridine-1-yl]-5,7-dihydro-6H-pyrrolo[2,3-d]pyrimidine-6-one (25), 4-Amino-2-[3-(2-cyclopentylethyl)imidazo[1,5-a]pyridine-1-yl]-5,5-dimethyl-5,7-dihydro-6H-pyrrolo[2,3-d]pyrimidine-6-one (26), disclosed in WO 2010/065275,

- 3-(4-Amino-5-cyclopropylpyrimidin-2-yl)-1-(2-fluorobenzyl)-1H-pyrazolo[3,4-0]pyridine (27) known as BAY 41-2272 disclosed as example 1 in WO 00/06568.

(1) (2) (3) (4)
Compounds according to formulae (1), (2), (3), (4), (6)-(8) and (17)-(27) are known as sGC stimulators. Preferred are compounds according to formulae (1), (2), (3), (4), (6), (7) and (27). Especially preferred are compounds according to formulae (3), (4), (6) und (7).

Compounds according to formulae (5) und (9)-(16) are known as sGC activators. Preferred is the compound according to formula (5).

A further embodiment of the invention is the combination of stimulators and/or activators of the soluble guanylate cyclase with PDE5 inhibitors for the prevention and treatment of fibrotic diseases, such as Systemic Sclerosis, scleroderma, and the concomitant fibrosis of internal organs. The following PDE 5 inhibitors are preferred for the combination with sGC stimulators and/or activators:
Especially preferred are combinations of compounds according to formulae (1), (2), (3), (4), (6), (7), (27) and/or (5) with vardenafil and/or sildenafil.

Especially preferred are combinations of compounds according to formulae (3), (4), (6), (7) and/or (5) with vardenafil and/or sildenafil for use in the prevention and/or treatment of Systemic Sclerosis (SSc).

Especially preferred are compounds according to formulae 3, 4, 6, and/or 7 for use in the prevention and/or treatment of Systemic Sclerosis SSc.

Especially preferred are compounds according to formulae 3, 4 and/or 6 for use in the prevention and/or treatment of Systemic Sclerosis SSc.

Especially preferred is at least one compound according to formulae 3, 4, 6, and/or 7 in combination with vardenafil or sildenafil for use in the prevention and/or treatment of scleroderma.

A further embodiment of the invention is the combination of stimulators and/or activators of the soluble guanylate cyclase with immunosuppressant therapy (i.e. cyclophosphamide CYP, methotrexate MTX), with kinase inhibitors, (i.e. sorafenib, regorafenib, imatinib, dasatinib), with glucocorticoids (i.e. prednisolon, methylprednisolon), with Anti-CD20 antibodies, with PI44 beta-glycan, with abatacept.

A further embodiment of the invention is the combination of stimulators and/or activators of the soluble guanylate cyclase with ACE-inhibitors (i.e. captopril, enalapril), calcium channel blockers (i.e. nifedipine), prostanoids (i.e. iloprost), endothelin antagonists (i.e. bosentan).
Another preferred embodiment of the invention are compounds and/or combinations indicated above for use in the prevention and/or treatment of Systemic Sclerosis (SSc), diffuse Systemic Sclerosis (dSSc), limited Systemic Sclerosis (ISSc), overlap type of Systemic Sclerosis, undifferentiated type of Systemic Sclerosis, Systemic Sclerosis sine scleroderma, skin fibrosis, scleroderma, nephrogenic fibrosing dermopathy (NFD), keloid formation.

Another preferred embodiment of the invention are compounds and/or combinations indicated above for use in the prevention and/or treatment of scleroderma.

Another preferred embodiment of the invention are compounds and/or combinations indicated above for use in the prevention and/or treatment of Systemic Sclerosis SSc concomitant fibrosis of internal organs, comprising the gut, the lung, the kidney and the blood vessels.

Another preferred embodiment of the invention is the use for the production of a medicament for prevention and/or treatment of Systemic Sclerosis (SSc) comprising an effective amount of a compound and/or a combination as indicated above.

Another preferred embodiment of the invention is the use for the production of a medicament for prevention and/or treatment of scleroderma comprising an effective amount of a compound and/or a combination as indicated above.

Another preferred embodiment of the invention is the use for the production of a medicament for prevention and/or treatment of Systemic Sclerosis (SSc), diffuse Systemic Sclerosis (dSSc), limited Systemic Sclerosis (ISSc), overlap type of Systemic Sclerosis, undifferentiated type of Systemic Sclerosis, Systemic Sclerosis sine scleroderma, skin fibrosis, scleroderma, nephrogenic fibrosing dermopathy (NFD), keloid formation comprising an effective amount of a compound and/or a combination as indicated above.

Another preferred embodiment of the invention is the use for the production of a medicament for prevention and/or treatment of Systemic Sclerosis SSc concomitant fibrosis of internal organs, comprising the gut, the lung, the kidney and the blood vessels comprising an effective amount of a compound and/or a combination as indicated above.

Another preferred embodiment of the invention is the pharmaceutical formulation comprising at least one compound or one combination as indicated above for the use in the prevention and/or treatment of Systemic Sclerosis (SSc).

Another preferred embodiment of the invention is the pharmaceutical formulation comprising at least one compound or one combination as indicated above for the use in the prevention and/or treatment of Systemic Sclerosis SSc concomitant fibrosis of internal organs, comprising the gut, the lung, the kidney and the blood vessels comprising an effective amount of a compound and/or a combination as indicated above.
treatment of Systemic Sclerosis (SSc), diffuse Systemic Sclerosis (dSSc), limited Systemic Sclerosis (ISSc), overlap type of Systemic Sclerosis, undifferentiated type of Systemic Sclerosis, Systemic Sclerosis sine scleroderma, skin fibrosis, scleroderma, nephrogenic fibrosing dermopathy (NFD), keloid formation.

Another preferred embodiment of the invention is the pharmaceutical formulation comprising at least one compound or one combination as indicated above for the use in the prevention and/or treatment of Systemic Sclerosis (SSc).

Another preferred embodiment of the invention is the pharmaceutical formulation comprising at least one compound or one combination as indicated above for the use in the prevention and/or treatment of Systemic Sclerosis SSc concomitant fibrosis of internal organs, comprising the gut, the lung, the kidney and the blood vessels.

Another preferred embodiment of the invention is a kit comprising at least one sGC stimulator and/or activator as indicated above or a combination as indicated above for the use in the prevention and/or treatment of Systemic Sclerosis (SSc).

Another preferred embodiment of the invention is a kit as indicated above for the use in the prevention and/or treatment of Systemic Sclerosis (SSc), diffuse Systemic Sclerosis (dSSc), limited Systemic Sclerosis (ISSc), overlap type of Systemic Sclerosis, undifferentiated type of Systemic Sclerosis, Systemic Sclerosis sine scleroderma, skin fibrosis, scleroderma, nephrogenic fibrosing dermopathy (NFD), keloid formation.

Another preferred embodiment of the invention is a kit comprising at least one sGC stimulator and/or activator as indicated above or a combination as indicated above for the use in the prevention and/or treatment of scleroderma.

Another preferred embodiment of the invention is a kit as indicated above for the use in the prevention and/or treatment of Systemic Sclerosis SSc concomitant fibrosis of internal organs, comprising the gut, the lung, the kidney and the blood vessels.

A pharmaceutical composition of the invention is formulated to be compatible with its intended route of administration. Examples of routes of administration include parenteral e.g., intravenous, intradermal, subcutaneous' oral (e.g.' inhalation)' transdermal (topical) transmucosal and rectal administration. Pharmaceutical compositions suitable for injectable use include sterile aqueous solutions (where water soluble) or dispersions and sterile powders for the extemporaneous preparation of sterile injectable solutions or dispersions. The carrier can be a solvent or dispersion medium containing, for example, water, ethanol, a pharmaceutically acceptable polyol like glycerol,
propylene glycol, liquid polyethylene glycol, and suitable mixtures thereof. The proper fluidity can be maintained, for example, by the use of a coating such as lecithin, by the maintenance of the required particle size in the case of dispersion and by the use of surfactants. Prevention of the action of microorganisms can be achieved by various antibacterial and antifungal agents for example, parabens, chlorobutanol, phenol, ascorbic acid, thimerosal, and the like. In many cases, it will be preferable to include isotonic agents, for example, sugars, polyalcohols such as maitol sorbitol sodium chloride in the composition.

Oral compositions generally include an inert diluent or an edible carrier. They can be enclosed in gelatin capsules or compressed into tablets. For the purpose of oral therapeutic administration, the active compound can be incorporated with excipients and used in the form of tablets, troches, or capsules. Oral compositions can also be prepared using a fluid carrier for use as a mouthwash, wherein the compound in the fluid carrier is applied orally and swished and expectorated or swallowed.

Pharmaceutically compatible binding agents, and/or adjuvant materials can be included as part of the composition. The tablets, pills, capsules, troches and the like can contain any of the following ingredients, or compounds of a similar nature: a binder such as microcrystalline cellulose, gum tragacanth or gelatin; an excipient such as starch or lactose, a disintegrating agent such as alginic acid, Primogel, or conl starch; a lubricant such as magnesium stearate or sterotes; a glidant such as colloidal silicon dioxide; a sweetening agent such as sucrose or saccharin; or a flavoring agent such as peppermint, methyl salicylate, or orange flavoring.

For administration by inhalation, the compounds are delivered in the form of an aerosol spray from a pressurized container or dispenser which contains a suitable propellant, e.g., a gas such as carbon dioxide, or a nebulizer.

Systemic administration can also be by transmucosal or transdermal means. For transmucosal or transdermal administration, penetrants appropriate to the barrier to be permeated are used in the formulation. Such penetrants are generally known in the art, and include, for example, for transmucosal administration, detergents, bile salts, and fusidic acid derivatives. Transmucosal administration can be accomplished through the use of nasal sprays or suppositories. For transdermal administration, the active compounds are formulated into ointments, salves, gels, or creams as generally known in the art.

The compounds can also be prepared in the form of suppositories (e.g., with conventional suppository bases such as cocoa butter and other glycerides) or retention enemas for rectal delivery.
In one embodiment, the active compounds are prepared with carriers that will protect the compound against rapid elimination from the body, such as a controlled release formulation, including implants and microencapsulated delivery systems. Bio degradable, biocompatible polymers can be used, such as ethylene vinyl acetate, polyanhydrides, polyglycolic acid, collagen, polyorthoesters, and polylactic acid.

**LC/MS-Methods:**

Method 1: MS instrument: Waters ZQ; HPLC instrument: Agilent 1100 Series; UV DAD; Column: Thermo Hypersil GOLD 3 μ 20 mm x 4 mm; Eluent A: 11 water + 0.5 ml 50% formic acid, Eluent B: 11 acetonitrile + 0.5 ml of 50% formic acid; Gradient: 0.0 min 100% A → 3.0 min 10% A → 4.0 min 10% A → 4.1 min 100% A (flow rate 2.5 ml/min); Oven: 55°C; Flow rate: 2 ml/min; UV detection: 210 nm.

Method 2: Instrument: Waters ACQUITY SQD UPLC System; Column: Waters Acquity UPLC HSS T3 1.8 μ 50 × 1 mm; Eluent A: 11 water + 0.25 ml 99% formic acid, Eluent B: 11 acetonitrile + 0.25 ml 99% formic acid; Gradient: 0.0 min 90% A → 1.2 min 5% A → 2.0 min 5% A; Oven: 50°C; Flow rate: 0.40 ml/min; UV detection: 210 - 400 nm.
Starting compounds and intermediates:

Example 1A

2,6-Dichloro-5-fluoronicotinamide

\[
\begin{align*}
\text{Cl} & \quad \text{N} \\
\text{Cl} & \quad \text{Cl} \\
\text{F} & \quad \text{C} \\
\text{NH}_2 & \quad \text{O}
\end{align*}
\]

A suspension of 25 g (130.90 mmol) of 2,6-dichloro-5-fluoro-3-cyanopyridine in cone. sulphuric acid (125 ml) was stirred at 60-65°C for 1 h. After cooling to RT, the contents of the flask were poured into ice-water and extracted three times with ethyl acetate (100 ml each time). The combined organic phases were washed with water (100 ml) and then with saturated aqueous sodium hydrogen carbonate solution (100 ml), dried and concentrated on a rotary evaporator. The material obtained was dried under a high vacuum.

Yield: 24.5 g (90% of theory)

\[\text{H NMR (400 MHz, DMSO-d}_6\text{): } \delta = 7.95 \text{ (br s, 1H), 8.11 \text{ (br s, 1H), 8.24 \text{ (d, 1H).}}\]

Example 2A

2-Chloro-5-fluoronicotinamide

\[
\begin{align*}
\text{Cl} & \quad \text{N} \\
\text{F} & \quad \text{C} \\
\text{NH}_2 & \quad \text{O}
\end{align*}
\]

A suspension of 21.9 g (335.35 mmol) of zinc in methanol (207 ml) was admixed at RT with 44 g (210.58 mmol) of 2,6-dichloro-5-fluoronicotinamide. Then acetic acid (18.5 ml) was added and the mixture was heated with stirring at reflux for 24 h. Thereafter the contents of the flask were decanted from the zinc, and ethyl acetate (414 ml) and saturated aqueous sodium hydrogen carbonate solution (414 ml) were added, followed by intense extractive stirring. Subsequently the reaction mixture was filtered with suction over kieselguhr and the filter product was washed three times with ethyl acetate (517 ml each time). The organic phase was separated off and the aqueous phase was washed with ethyl acetate (258 ml). The combined organic phases were washed once with saturated aqueous sodium hydrogen carbonate solution (414 ml), dried and concentrated under
reduced pressure. The resulting crystals were admixed with dichloromethane (388 ml) and extractively stirred for 20 min. Filtration with suction was carried out again, and the filter product was washed with diethyl ether and sucked dry.

Yield: 20.2 g (53% of theory)

\[ ^1H \text{ NMR (}400 \text{ MHz, DMSO-}d_6\rangle: \delta = 7.87 (\text{br s, } 1H), 7.99 (\text{dd, } 1H), 8.10 (\text{br s, } 1H), 8.52 (\text{d, } 1H). \]

**Example 3A**

2-Chloro-5-fluornicotinonitrile

![chemical structure](image)

A suspension of 46.2 g (264.66 mmol) of 2-chloro-5-fluoronicotamidine in dichloromethane (783 ml) was admixed with 81.2 ml (582.25 mmol) of triethylamine and cooled to 0°C. Then, with stirring, 41.12 ml (291.13 mmol) of trifluoroacetic anhydride were added slowly dropwise and the mixture was stirred at 0°C for 1.5 h. The reaction solution was subsequently washed twice with saturated aqueous sodium hydrogen carbon solution (391 ml each time), dried and concentrated under reduced pressure.

Yield: 42.1 g (90% of theory).

\[ ^1H \text{ NMR (}400 \text{ MHz, DMSO-}d_6\rangle: \delta = 8.66 (\text{dd, } 1H), 8.82 (\text{d, } 1H). \]

**Example 4A**

5-Fluoro-lH-pyrazolo[3,4-b]pyridin-3-amine

![chemical structure](image)

A suspension of 38.5 g (245.93 mmol) of 2-chloro-5-fluoronicotonitrile was introduced in 1,2-ethanediol (380 ml) and subsequently admixed with hydrazine hydrate (1.19 ml, 2.459 mol). The mixture was heated at reflux with stirring for 4 h. On cooling, the product precipitated. The yellow crystals were admixed with water (380 ml) and subjected to extractive stirring at RT for
10 min. Then the suspension was filtered with suction over a frit, and the filter product was washed with water (200 ml) and with -10°C cold THF (200 ml). The residue was dried under a high vacuum over phosphorus pentoxide.

Yield: 22.8 g (61% of theory)

\[ ^1H \text{ NMR (400 MHz, DMSO-d}_6): \delta = 5.54 \text{ (s, 2H), 7.96 (dd, 1H), 8.38 (m, 1H), 12.07 (m, 1H).} \]

Example 5A

5-Fluoro-3-iodo-1H-pyrazolo[3,4-b]pyridine

```
N
\[ \text{F} \]
```

In THF (329 ml), 10 g (65.75 mmol) of 5-fluoro-1H-pyrazolo[3,4-b]pyridin-3-amine were introduced and cooled to 0°C. Then 16.65 ml (131.46 mmol) of boron trifluoride diethyl ether complex were slowly added. The reaction mixture was cooled further to -10°C. Then a solution of 10.01 g (85.45 mmol) of isopentyl nitrite in THF (24.39 ml) was added slowly, followed by stirring for a further 30 min. The mixture was diluted with cold diethyl ether (329 ml) and the resulting solid was isolated by filtration. The diazonium salt thus prepared was added in portions to a 0°C cold solution of 12.81 g (85.45 mmol) of sodium iodide in acetone (329 ml), and the mixture was stirred at RT for 30 min. The reaction mixture was poured into ice-water (1.8 l) and extracted twice with ethyl acetate (487 ml each time). The collected organic phases were washed with saturated aqueous sodium chloride solution (244 ml), dried, filtered and concentrated. This gave 12.1 g (86% purity, 60% of th.) of the desired compound in the form of a brown solid. The crude product was reacted without further purification.

LC-MS (Method 1): \( R_t = 1.68 \text{ min} \); MS (ESIpos): \( m/z = 264 (M+H)^+ \)
Example 6A

5-Fluoro-l-(2-fluorobenzyl)-3-iodo-lH-pyrazolo[3,4-b]pyridine

In DMF (2538 ml), 141 g (462.11 mmol) of the compound from Example 5A were introduced and then 96.09 g (508.32 mmol) of 2-fluorobenzyl bromide and 165.62 g (508.32 mmol) of cesium carbonate were added. The mixture was stirred at RT for two hours. The reaction mixture was then poured into saturated aqueous sodium chloride solution (13670 ml) and extracted twice with ethyl acetate (5858 ml). The collected organic phases were washed with saturated aqueous sodium chloride solution (3905 ml), dried, filtered and concentrated. The residue was chromatographed on silica gel (eluent: petroleum ether/ethyl acetate 97:3) and the product fractions were concentrated. The resulting solid was dissolved in dichloromethane and washed once with saturated aqueous sodium thiosulphate solution (500 ml) and then with saturated aqueous sodium chloride solution (500 ml). The product was concentrated to dryness and the residue was suspended with diethyl ether, isolated by filtration with suction and dried under a high vacuum. This gave 106.6 g (62% of theory) of the desired compound.

LC-MS (Method 1): \( R_s = 2.57 \) min

MS (ESIpos): \( m/z = 372 \) (M+H)

\[ ^1H \text{ NMR (400 MHz, DMSO-}d_6\text{): } \delta = 5.73 \text{ (s, 2H), 7.13 - 7.26 (m, 3H), 7.33 - 7.41 (m, 1H), 7.94 (dd, 1H), 8.69 - 8.73 (m, 1H).} \]
Example 7A

2-[5-Fluoro-1-(2-fluorobenzyl)-1H-pyrazolo[3,4-b]pyridin-3-yl]-5-nitropyrimidine-4,6-diamine

In 1,4-dioxane (86 ml), 860 mg (2.32 mmol) of the compound from Example 6A were introduced under argon and the reaction mixture was flushed with argon for 10 min. Then 3.51 ml (6.95 mmol) of hexabutylditin and 483 mg (2.55 mmol) of 2-chloro-5-nitropyrimidine-4,6-diamine (prepared by the method of Helv. Chim. Acta 1951, 34, 835-40) were added. Subsequently 860 mg (0.744 mmol) of tetrakis(triphenylphosphine)palladium(0) were added and the reaction mixture was heated at reflux overnight. It was then cooled to RT, admixed with water and extracted twice with ethyl acetate. The collected organic phases were dried over sodium sulphate, filtered and concentrated. The residue was subjected to extractive stirring in ethyl acetate, and the solid was isolated by filtration and dried under a high vacuum. This gave 355 mg (62% purity, 24% of th.) of the desired compound. The crude product was reacted without further purification.

LC-MS (Method 2): R_t = 1.03 min

MS (ESIpos): m/z = 399 (M+H)^+
Example 8A

5-Fluoro-1-(2-fluorobenzyl)-1H-pyrazolo[3,4-b]pyridine-3-carbonitrile

A suspension of 16.03 g (43.19 mmol) of 5-fluoro-1-(2-fluorobenzyl)-3-iodo-1H-pyrazolo[3,4-b]pyridine (Example 6A) and 4.25 g (47.51 mmol) of copper cyanide were introduced in DMSO (120 ml) and stirred at 150°C for 2 h. After cooling, the contents of the flask were cooled to about 40°C, poured into a solution of concentrated aqueous ammonia (90 ml) and water (500 ml), admixed with ethyl acetate (200 ml) and subjected to brief extractive stirring. The aqueous phase was separated off and extracted twice more with ethyl acetate (200 ml each time). The combined organic phases were washed twice with 10% strength aqueous sodium chloride solution (100 ml each time), dried and concentrated under reduced pressure. The crude product was reacted without further purification.

Yield: 11.1 g (91% of theory)

^1H NMR (400 MHz, DMSO-d$_6$): $\delta$ = 5.87 (s, 2H), 7.17 - 7.42 (m, 4H), 8.52 (dd, 1H), 8.87 (dd, 1H).
Example 9A

5-Fluoro-l-(2-fluorobenzyl)-lH-pyrazolo[3,4-b]pyridine-3-carboximidamide acetate

To 2.22 g (41.07 mmol) of sodium methoxide in methanol (270 ml) were added 11.1 g (41.07 mmol) of 5-fluoro-l-(2-fluorobenzyl)-lH-pyrazolo[3,4-b]pyridine-3-carbonitrile (Example 8A) and the mixture was stirred at RT for 2 h. Then 2.64 g (49.29 mmol) of ammonium chloride and acetic acid (9.17 ml) were added and the mixture was heated at reflux overnight. It was then concentrated to dryness and the residue was taken up in water (100 ml) and ethyl acetate (100 ml) and adjusted to a pH of 10 using 2N aqueous sodium hydroxide solution. It was stirred intensively at RT for about 1 h. The resulting suspension was filtered with suction and the filter product was washed with ethyl acetate (100 ml), with water (100 ml) and again with ethyl acetate (100 ml). The residue was dried under a high vacuum over phosphorus pentoxide.

Yield: 9.6 g (78% of th.)

MS (ESIpos): m/z = 288 (M+H)^+

^1H NMR (400 MHz, DMSO-d₆): δ = 1.85 (s, 3H), 5.80 (s, 2H), 7.14 - 7.25 (m, 3H), 7.36 (m, 1H), 8.42 (dd, 1H), 8.72 (dd, 1H).
Example 10A

2-[5-Fluoro-1-(2-fluorobenzyl)-1H-pyrazolo[3,4-b]pyridin-3-yl]-5-[(E)-phenyldiazenyl]pyrimidine-4,6-diamine

Water (40 ml) and concentrated hydrochloric acid (7.07 ml) were admixed with stirring with 3.85 g (41.34 mmol) of aniline and this mixture was cooled to 0°C. Then a solution of 2.85 g (41.34 mmol) of sodium nitrite in water (21 ml) was added dropwise at between 0°C and 5°C, followed by stirring at 0°C for 15 min. Thereafter, at 0°C, a solution of 4.28 g (52.25 mmol) of sodium acetate in water (19 ml) was added rapidly dropwise, and then, with thorough stirring, a solution of 2.73 g (41.34 mmol) of malononitrile in ethanol (10 ml) was added dropwise. After 2 h at 0°C, the resulting precipitate was isolated by filtration with suction and washed three times with water (50 ml each time) and with petroleum ether (50 ml). The residue, still moist, was dissolved in DMF (46 ml) and added dropwise at precisely 85°C to a solution of 9.5 g (33.07 mmol) of 5-fluoro-1-(2-fluorobenzyl)-1H-pyrazolo[3,4-b]pyridin-3-carboximidamide acetate (Example 9A) in DMF (46 ml) and triethylamine (5.76 ml). The mixture was then stirred at 100°C for 4 h and left to cool to RT overnight. The mixture was poured into water (480 ml) and subjected to extractive stirring at RT for 1 h. After the precipitate had been isolated by filtration with suction, it was washed twice with water (100 ml each time) and twice with methanol (50 ml each time) and then dried under a high vacuum.

Yield: 9.6 g (59% of theory)

LC-MS (Method 2): Rₜ = 1.21 min

MS (ESIpos): m/z = 458 (M+H)⁺
Example 11A

2-[5-Fluoro-1-(2-fluorobenzyl)-1H-pyrazolo[3,4-b]pyridin-3-yl]pyrimidine-4,5,6-riamine

Variant A: Preparation starting from Example 7A:

In pyridine (30 ml), 378 mg (0.949 mmol) of the compound from Example 7A were introduced and then 143 mg (0.135 mmol) of palladium (10% on carbon) were added. The mixture was hydrogenated overnight at RT under standard hydrogen pressure. The suspension was then filtered through kieselguhr and the filtercake was washed with ethanol. The filtrate was concentrated and yielded 233 mg (81% purity, 51% of theory) of the desired compound, which was reacted without further purification.

Variant B: Preparation starting from Example 10A:

In DMF (800 ml), 39.23 g (85.75 mmol) of the compound from Example 10A were introduced and then 4 g of palladium (10% on carbon) were added. The mixture was hydrogenated with stirring overnight under standard hydrogen pressure. The batch was filtered over kieselguhr and the filter product was washed with a little DMF and then with a little methanol, and concentrated to dryness. The residue was admixed with ethyl acetate and stirred vigorously, and the precipitate was filtered off with suction, washed with ethyl acetate and diisopropyl ether and dried under a high vacuum over Sicapent.

Yield: 31.7 g (100% of theory)

LC-MS (Method 2): R<sub>t+</sub> = 0.81 min

MS (ESIpos): m/z = 369 (M+H)<sup>+</sup>
Working Examples:

Example 1

Methyl \{4,6-diamino-2-[5-fluoro-1-(2-fluorobenzyl)-1H-pyrazolo[3,4-b]pyridin-3-yl]pyrimidin-5-yl\} carbamate

In pyridine (600 ml), 31.75 g (86.20 mmol) of the compound from Example 11A were introduced under argon and cooled to 0°C. Then a solution of 6.66 ml (86.20 mmol) of methyl chloroformate in dichloromethane (10 ml) was added dropwise and the mixture was stirred at 0°C for 1 h. Thereafter the reaction mixture was brought to RT, concentrated under reduced pressure and co-distilled repeatedly with toluene. The residue was stirred with water/ethanol and then filtered off on a frit, after which it was washed with ethanol and ethyl acetate. Subsequently the residue was again stirred with diethyl ether, isolated by filtration with suction and then dried under a high vacuum.

Yield: 24.24 g (65% of theory)

LC-MS (Method 2): Rᵣ = 0.79 min

MS (ESIpos): m/z = 427 (M+H)+

¹H NMR (400 MHz, DMSO-d₆): δ = 3.62 (br. s, 3H), 5.79 (s, 2H), 6.22 (br. s, 4H), 7.10 - 7.19 (m, 2H), 7.19 - 7.26 (m, 1H), 7.32 - 7.40 (m, 1H), 7.67 (br. s, 0.2H), 7.99 (br. s, 0.8H), 8.66 (m, 1H), 8.89 (d, 1H).
Example 2

Methyl {4,6-diamino-2-[5-fluoro-l-(2-fluorobenzyl)-lH-pyrazolo[3,4-b]pyridin-3-yl]pyrimidin-5-yl} methylcarbamate

A quantity of 200 mg (0.469 mmol) of methyl {4,6-diamino-2-[5-fluoro-l-(2-fluorobenzyl)-lH-pyrazolo[3,4-b]pyridin-3-yl]pyrimidin-5-yl} carbamate (Example 1) was introduced in THF (5 ml) at 0°C. Then 0.704 ml (0.704 mmol) of lithium hexamethyldisilazane solution (1M in THF) was added and the mixture was stirred at this temperature for 20 min. Subsequently 43.8 µl (0.704 mmol) of iodomethane were added and the mixture was warmed to RT. After 1 h at this temperature, reaction was terminated with water (1 ml) and the reaction mixture was concentrated, the residue being separated by means of preparative RP-HPLC (water (+0.05% formic acid)-acetonitrile gradient).

Yield: 90 mg (44% of theory)

LC-MS (Method 2): R_t = 0.85 min

MS (ESIpos): m/z = 441 (M+H)^+

^1H NMR (400 MHz, DMSO-d_6): &delta; = 3.00 (s, 3H), 3.53 (s, 2.2H), 3.66 (s, 0.8H), 5.81 (s, 2H), 6.57 (br. s, 4H), 7.13 (m, 2H), 7.22 (m, 1H), 7.35 (m, 1H), 8.67 (m, 1H), 8.87 (dd, 1H).
Example 3

Methyl {4,6-diamo-2-[5-fluoro-1-(2-fluorobenzyl)-1H-pyrazolo[3,4-b]pyridin-3-yl]pyrimidin-5-yl}(2,2,2-trifluoroethyl)carbamate

A quantity of 3.470 g (8.138 mmol) of the compound from Example 1 was suspended in 35 ml of THF, admixed at 0°C with 358 mg (8.952 mmol) of sodium hydride (60% suspension in mineral oil) and stirred at 0°C for 90 min, in the course of which a solution was formed. A quantity of 2.519 g (8.952 mmol) of 2,2,2-trifluoroethyl trichloromethanesulphonate was added and the mixture was stirred at RT for 48 h. It was then stirred with water and concentrated on a rotary evaporator. The residue was taken up in ethyl acetate, and the organic phase was washed twice with water and dried over sodium sulphate. This gave 5.005 g of the target compound (79% of th., purity by HPLC 65%). A quantity of 250 mg of the residue was purified by means of preparative HPLC (Eluent: methanol/water, gradient 30:70 → 90:10).

LC-MS (Method 2): R<sub>t</sub> = 0.97 min; MS (EIpos): m/z = 509 [M+H]<sup>+</sup>.

<sup>1</sup>H NMR (400 MHz, DMSO-d<sub>6</sub>): δ [ppm] = 3.63 (s, 3H), 4.06-4.15 (m, 2H), 5.80 (s, 2H), 6.46 (s br, 4H) 7.1-7.15 (m, 2H), 7.20-7.25 (m, 1H), 7.33-7.38 (m, 1H), 8.66 (dd, 1H), 8.91 (dd, 1H).
Example A

**Bleomycin-induced skin fibrosis**

Local skin fibrosis was induced in 6-week-old, pathogen-free, female DBA/2 mice (Charles River, Sulzfeld, Germany) by repeated (every other day) subcutaneous injections of bleomycin (0.5 mg/ml in saline) in a defined area of the upper back. Control mice were injected in the same manner with saline only and served as reference. For all groups the injection volume was 100 µl. Concomitant to bleomycin treatment, the mice were treated orally with test drug or vehicle. Mice were treated a) with vehicle b) with 1mg/kg example 27, and c) with 3 mg/kg example 27, twice a day via gavage for 21 days. After this 3 weeks treatment period, the animals were sacrificed and skin samples were obtained for analysis.

**Histological analysis**

The injected skin areas were fixed in 4% formalin and embedded in paraffin. Histological sections were stained with hematoxylin and eosin for the determination of dermal thickness. The dermal thickness was determined by measuring the largest distance between the epidermal-dermal junction and the dermal-subcutaneous fat junction. The measurements were performed by an examiner blinded to the treatment of the mice.

**Hydroxyproline assay**

To analyze the collagen content in skin samples, hydroxyproline assay was performed. After digestion of punch biopsies (0 3mm) in 6M HC1 for three hours at 120°C, chloramine T (0.06 M) was added and samples were mixed and incubated for 20 min at room temperature. 3.15 M perchloric acid and 20 % p-dimethylaminobenzaldehyde were added and samples were incubated for additional 20 min at 60 °C. The absorbance was determined at 557 nm.

**Immunohistochemistry for α-smooth muscle actin**

The expression of α-smooth muscle actin (αSMA) was analyzed in paraffin embedded sections. After deparaffinization, samples were incubated with 3% bovine serum albumin followed by incubation with 3% H2O2. αSMA positive cells in mouse sections were detected by incubation with monoclonal anti-αSMA antibodies (clone 1A4, Sigma-Aldrich, Steinheim, Germany). Irrelevant isotype antibodies in the same concentration were used for control (Santa Cruz Biotechnology, Santa Cruz, CA, USA). Antibodies labeled with horseradish peroxidase (Dako, Hamburg, Germany) were used as secondary antibodies. The expression of the NICD and αSMA was visualized with DAB peroxidase substrate solution (Sigma-Aldrich). The number of myofibroblasts
was counted from 4 different sections of lesional skin for each mouse by an examiner blinded to the treatment of the mice.

Example B

Bleomycin-induced skin fibrosis

Local skin fibrosis was induced in 6-week-old, pathogen-free, female DBA/2 mice (Charles River, Sulzfeld, Germany) by repeated (every other day) subcutaneous injections of bleomycin (0.5 mg/ml in saline) in a defined area of the upper back. Control mice were injected in the same manner with saline only. For all groups the injection volume was 100 µl. The study comprises 4 arms with

a) mice receiving saline injection for 6 weeks (serving as reference)

b) mice receiving Bleomycin injection for 6 weeks

c) mice receiving Bleomycin injection for 6 weeks and additional treatment with example 27 (3 mg/kg) twice a day via gavage for the last 3 weeks

d) mice receiving the first 3 weeks bleomycin injections and the second 3 weeks saline injection.

After 6 weeks the animals were sacrificed and skin samples were obtained for analysis.

Histological analysis, hydroxyproline assay and immunohistochemistry for a-smooth muscel actin were performed as described in the Example 1 section.

Example C

Tight skin mouse model

In addition to the mouse model of bleomycin-induced dermal fibrosis, the tight-skin (Tsk-1) mouse model of systemic sclerosis was used to evaluate the anti-fibrotic potential of test drugs. Due to a dominant mutation in fibrillin-1, the phenotype of Tsk-1 is characterized by an increased hypodermal thickness. Genotyping of Tsk-1 mice was performed by PCR with the following primers: mutated fibrillin-1/ Tsk-1 forward primer: 5’ - GTTGGCAACTATACTGCAT - 3’, reverse primer: 5’ - CTTTCCCTGGTAACATAGGA - 3’. Tsk-1 mice were treated daily with test drug or vehicle, respectively, by oral gavage. In addition, a group of corresponding wild type (pa/pa) mice was treated with vehicle. The treatment was started at an age of five weeks. After five weeks of treatment, mice were sacrificed by cervical dislocation and skin samples were obtained for analysis.

Histological analysis, hydroxyproline assay and immunohistochemistry for α-smooth muscle actin were performed as described in the Example 1 section.

Table 4: Effects of example 27 on established skin fibrosis in Tsk-mice

Fibrosis parameters expressed as x-fold change with respect to vehicle-treated wild type mice
Example D

The haemodynamic effects of i.e. example, example 3, example 4, example 6 were analyzed in conscious mice. Telemetric implants (DSI®) were used. Signals were received with RMC1-DSI® receiver plates, compiled and analyzed with PONEMAH® physiology platform software.

The mice received either placebo (tylose), 0.3 mg/kg example 27, 1 mg/kg example 27, 3 mg/kg example 27 (Figure 1), 1.0 mg/kg example 3, 3.0 mg/kg example 3, 10.0 mg/kg example 3 (Figure 2A,2B), 1.0 mg/kg example 4, 3.0 mg/kg example 4, 10.0 mg/kg example 4 (figure 3A/3B), 0.3 mg/kg example 6, 1.0 mg/kg example 6, 3.0 mg/kg, 10.0 mg/kg example 6 (figure 4A/4B). The blood pressure and heart rate was monitored before and after application of placebo or the compounds. Figure 1 shows effects of example 27 on blood pressure (left) and heart rate (right), figure 2 shows the effect of example 3 on blood pressure (Figure 2A) and heart rate (Figure 2B), figure 3 shows the effects of example 4 on blood pressure (Figure 3A) and heart rate (Figure 3B), figure 4 shows the effect of example 6 on blood pressure (Figure 4A) and heart rate (figure 4B).

Example E

The effects of example 27 and vardenafil as stand alone and in combination were analyzed in vitro in human dermal fibroblasts in vitro. Example 27, vardenafil and combinations thereof significantly blocked the TGFbeta-induced Collagen gene expression and Hydroxyproline (HP) deposition.

2. Compounds according to formulae and (1), (2), (3), (4), (5), (6), (7) and (27) for use in the prevention and/or treatment of Systemic Sclerosis (SSc).

3. At least one compound according to claim 1 and 2 in combination with at least one PDE5 Inhibitor selected from the group of:

- **Tadalafil** ((6R,12aR) -2,3,6,7,12,12a - Hexahydro - 2 - methyl - 6 - (3,4-methylene - dioxo) phenyl) pyrazino(1',2':1,6) pyrido(3,4-b)indole-1,4-dione,
- **Vardenafil** (2-(2-Ethoxy-5-(4-ethylpiperazin-1-yl)-1-sulfonylphenyl)-5-methyl-7-propyl-3H-imidazo(5,1-f) (1,2,4)triazin-4-one),
- **Sildenafil** (3-[2-ethoxy-5-(4-methylpiperazin-1-yl)sulfonyl-phenyl]-7-methyl-9-propyl-1-2,4,7,8-tetrazabicyclo [4.3.0]nona -3,8,10-trien-5-one),
- **Udenafil** 5-[2-propyloxy-5-(1-methyl-2-pyrrolidinylethylamidosulfonyl)phenyl]-methyl-3-propyl-1,6-

4. At least one compound according to claim 1 and 2 in combination with sildenafil or vardenafil for use in the prevention and/or treatment of Systemic Sclerosis (SSc).

5. Compounds according to claim 1 to 4 for use in the prevention and/or treatment of Systemic Sclerosis (SSc), diffuse Systemic Sclerosis (dSSc), limited Systemic Sclerosis (ISSc), overlap type of Systemic Sclerosis, undifferentiated type of Systemic Sclerosis, Systemic Sclerosis sine scleroderma, skin fibrosis, scleroderma, nephrogenic fibrosing dermopathy (NFD), nephrogenic systemic fibrosis (NSF), keloid formation.

6. Compounds according to claim 1 to 4 for use in the prevention and/or treatment of Systemic Sclerosis SSc concomitant fibrosis of internal organs, comprising the gut, the lung, the kidney and the blood vessels.

7. Compounds according to formulae 3, 4, 6, and/or 7 for use in the prevention and/or treatment of Systemic Sclerosis SSc.

8. At least one compound according to formulae 3, 4, 6, and/or 7 in combination with vardenafil or sildenafil for use in the prevention and/or treatment of Systemic Sclerosis SSc.

9. Use for the production of a medicament for prevention and/or treatment of Systemic Sclerosis (SSc) comprising an effective amount of a compound according to claim 1 to 4.

10. Use for the production of a medicament for prevention and/or treatment of Systemic Sclerosis (SSc), diffuse Systemic Sclerosis (dSSc), limited Systemic Sclerosis (ISSc), overlap type of Systemic Sclerosis, undifferentiated type of Systemic Sclerosis, Systemic Sclerosis sine scleroderma, skin fibrosis, scleroderma, nephrogenic fibrosing dermopathy (NFD), keloid formation comprising an effective amount of a compound according to 1 to 4.
11. Use for the production of a medicament for prevention and/or treatment of Systemic Sclerosis SSc concomitant fibrosis of internal organs, comprising the gut, the lung, the kidney and the blood vessels comprising an effective amount of a compound according to 1 to 4.

12. Pharmaceutical formulation comprising at least one compound or one combination according to claims 1 to 4 for the use in the prevention and/or treatment of Systemic Sclerosis (SSc).

13. Pharmaceutical formulation comprising at least one compound or one combination according to claims 1 to 4 for the use in the prevention and/or treatment of Systemic Sclerosis (SSc), diffuse Systemic Sclerosis (dSSc), limited Systemic Sclerosis (ISSc), overlap type of Systemic Sclerosis, undifferentiated type of Systemic Sclerosis, Systemic Sclerosis sine scleroderma, skin fibrosis, scleroderma, nephrogenic fibrosing dermopathy (NFD), keloid formation.

14. Pharmaceutical formulation comprising at least one compound or one combination according to claims 1 to 4 for the use in the prevention and/or treatment of Systemic Sclerosis SSc concomitant fibrosis of internal organs, comprising the gut, the lung, the kidney and the blood vessels.

15. Kit comprising at least one sGC stimulator and/or activator according to claims 1 to 2 or a combination according to claims 3 to 4 for the use in the prevention and/or treatment of Systemic Sclerosis (SSc).

16. Kit according to claim 13 for the use in the prevention and/or treatment of Systemic Sclerosis (SSc), diffuse Systemic Sclerosis (dSSc), limited Systemic Sclerosis (ISSc), overlap type of Systemic Sclerosis, undifferentiated type of Systemic Sclerosis, Systemic Sclerosis sine scleroderma, skin fibrosis, scleroderma, nephrogenic fibrosing dermopathy (NFD), keloid formation.

17. Kit according to claims 13 and 14 for the use in the prevention and/or treatment of Systemic Sclerosis SSc concomitant fibrosis of internal organs, comprising the gut, the lung, the kidney and the blood vessels.

A. CLASSIFICATION OF SUBJECT MATTER
C07D471/04 A61K31/437
A61P9/00 A61P15/00
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED
Minimum documentation searched (classification system followed by classification symbols)
C07D A61K

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)
EPO-Internal , BIOSIS, CHEM ABS Data, EMBASE, PAJ, WPI Data

C. DOCUMENTS CONSIDERED TO BE RELEVANT

<table>
<thead>
<tr>
<th>Category*</th>
<th>Citation of document, with indication, where appropriate, of the relevant passages</th>
<th>Relevant to claim No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>

</table>

[Special categories of cited documents:]

* "A" document defining the general state of the art which is not considered to be of particular relevance

* "E" earlier document but published on or after the international filing date

* "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

* "O" document referring to an oral disclosure, use, exhibition or other means

* "P" document published prior to the international filing date but later than the priority date claimed

* "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

* "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

* "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

* "A" document member of the same patent family

Date of the actual completion of the international search: 7 October 2011

Date of mailing of the international search report: 21/10/2011
