(54) **Improved air gun body with valve housed in the connection with the compressed air feeding pipe.**

(57) An air gun or pistol has a body [1] of simple construction by moulding with a valve [3] to be assembled separately therein, and also shows a higher ease of handling, as the valve is housed within an end fitting or "nipple" [6] connected with a compressed air feeding pipe [9]. The lever [2] controlling the valve opening is mounted on the upper part of the body and the valve, normally closed, is operated through an elongated rod [3a] driven by the lever and extending along a longitudinal cavity [10] provided in the body itself.
