# INDICATIONS RELATING TO A DEPOSITED MICROORGANISM

**A.** The indications made below relate to the microorganism referred to in the description
on page 8 , line 27

**B. IDENTIFICATION OF DEPOSIT** Further deposits are identified on an additional sheet ☐

Name of depositary institution American Type Culture Collection

Address of depositary institution (*including postal code and country*)

10801 University Boulevard
Manasas, Virginia 20110-2209
United States of America

Date of depositMay 2, 1997

Accession Number 55969

**C. ADDITIONAL INDICATIONS** *(leave blank if not applicable)* This information is continued on an additional sheet ☐

**D. DESIGNATED STATES FOR WHICH INDICATIONS ARE MADE** *(if the indications are not for all designated States)*

**E. SEPARATE FURNISHING OF INDICATIONS** *(leave blank if not applicable)*

The indications listed below will be submitted to the International Bureau later (*specify the general nature of the indications, e.g., "Accession Number of Deposit"*)

For receiving Office use only

☑ This sheet was received with the international application

Authorized officer

For International Bureau use only

☐ This sheet was received by the International Bureau on:

**What Is Claimed Is:**

1. Computer readable medium having recorded thereon the nucleotide sequence depicted in SEQ ID NOS:1-982, a representative fragment thereof or a nucleotide sequence at least 95% identical to a nucleotide sequence depicted in SEQ ID NOS:1-982.

2. The computer readable medium of claim 1 having recorded thereon any one of the fragments of SEQ ID NOS:1-982 depicted in Tables 2 and 3 or a degenerate variant thereof.

3. The computer readable medium of claim 1, wherein said medium is selected from the group consisting of a floppy disc, a hard disc, random access memory (RAM), read only memory (ROM), and CD-ROM.

4. The computer readable medium of claim 3, wherein said medium is selected from the group consisting of a floppy disc, a hard disc, random access memory (RAM), read only memory (ROM), and CD-ROM.

5. A computer-based system for identifying fragments of the *Enterococcus faecalis* genome of commercial importance comprising the following elements:

a) a data storage means comprising the nucleotide sequence of SEQ ID NOS:1-982, a representative fragment thereof, or a nucleotide sequence at least 95% identical to a nucleotide sequence of SEQ ID NOS:1-982;

b) search means for comparing a target sequence to the nucleotide sequence of the data storage means of step (a) to identify homologous sequence(s), and

c) retrieval means for obtaining said homologous sequence(s) of step (b).

6. A method for identifying commercially important nucleic acid fragments of the *Enterococcus faecalis* genome comprising the step of comparing a database comprising the nucleotide sequences depicted in SEQ ID NOS:1-982, a representative fragment thereof, or a nucleotide sequence at least 95% identical to a nucleotide sequence of SEQ ID NOS:1-982 with a target sequence to obtain a nucleic acid molecule comprised of a complementary nucleotide sequence to said target sequence, wherein said target sequence is not randomly selected.

7. A method for identifying an expression modulating fragment of *Enterococcus faecalis* genome comprising the step of comparing a database comprising the nucleotide sequences depicted in SEQ ID NOS:1-982, a representative fragment thereof, or a nucleotide sequence at least 95% identical to the nucleotide sequence of SEQ ID NOS:1-

982 with a target sequence to obtain a nucleic acid molecule comprised of a complementary nucleotide sequence to said target sequence, wherein said target sequence comprises sequences known to regulate gene expression.

8. An isolated protein-encoding nucleic acid fragment of the *Enterococcus faecalis* genome, wherein said fragment consists of the nucleotide sequence of any one of the fragments of SEQ ID NOS:1-982 depicted in Tables 2 and 3, or a degenerate variant thereof.

9. A vector comprising any one of the fragments of the *Enterococcus faecalis* genome of claim 8.

10. An isolated fragment of the *Enterococcus faecalis* genome, wherein said fragment modulates the expression of an operably linked open reading frame, wherein said fragment consists of the nucleotide sequence from about 10 to 200 bases in length which is 5' to any one of the open reading of claim 8.

11. A vector comprising any one of the fragments of the *Enterococcus faecalis* genome of claim 8.

12. An organism which has been altered to contain any one of the fragments of the *Enterococcus faecalis* genome of claim 8.

13. An organism which has been altered to contain any one of the fragments of the *Enterococcus faecalis* genome of claim 10.

14. A method for regulating the expression of a nucleic acid molecule comprising the step of covalently attaching to said nucleic acid molecule to a a nucleic acid molecule of claim 10.

15. An isolated polypeptide encoded by any of the fragments of the *Enterococcus faecalis* genome of claim 8.

16. An isolated polynucleotide molecule encoding any one of the polypeptides of claim 15.

17. An antibody which selectively binds to any one of the polypeptides of claim 15.

18. A method for producing a polypeptide in a host cell comprising the steps of:

a) incubating a host containing a heterologous nucleic acid molecule whose nucleotide sequence consists of any one of the fragments of the *Enterococcus faecalis* genome of claim 8, under conditions where said heterologous nucleic acid molecule is expressed to produce said protein, and

b) isolating said protein.
