⑤④ **Duplicating stencil.**

⑤⑦ A duplicating stencil (1) has its heading strip (2) in the form of two separate regions (2a and 2b) separated by a perforation line (6).

The holes (3) on one region (2b) have a different arrangement from those (4, 5) on the other regions (2a), so that tearing along the perforation line (6) allows one region (2b) to be separated from the rest of the stencil and to leave the holes (4, 5) as the effective mounting holes instead of the holes (3).

A single image field (10-16) and a single top edge guide line (8) apply for all of the heading strip regions (2a and 2b).
