UNITED STATES PATENT OFFICE.

FORREST ADDITON, OF FLOWERY BRANCH, GEORGIA.

WARDROBE.

Application filed September 10, 1926. Serial No. 134,735.

The invention relates to an article of furniture and more particularly to that class known as wardrobes adaptable for use as an adjustable mirror.

The primary object of the invention is the provision of an article of furniture of this character wherein the body thereof at opposite sides has opposed swinging doors, each being fitted with a mirror, while the body of said article of furniture has fitted therein a mirror section, which latter is adapted to cooperate with the mirrors in the doors, so that on adjustment of the doors when swung to open position, will enable a person to get the desired view of his or her attire or person, the article of furniture in its construction being of novel form.

Another object of the invention is the provision of an article of furniture of this character, wherein the interior thereof will permit the storage of articles of wearing apparel and access may be had to the same from opposite sides of such article of furniture.

A further object of the invention is the provision of an article of furniture of this character, which is extremely simple in construction, thoroughly reliable and efficient in its purpose, strong, durable, neat and attractive in appearance, and inexpensive to manufacture.

With these and other objects in view, the invention consists of the novel features of construction, combination and arrangement of parts, as will be hereinafter more fully described in detail, illustrated in the accompanying drawing and pointed out in the claims hereunto appended.

In the accompanying drawing:—

Figure 1 is an elevation of an article of furniture constructed in accordance with the invention, showing the doors swingingly mounted thereon at opposite sides thrown to angular relation for the use of the mirror panels, both in the doors and in the article of furniture.

Figure 2 is a vertical longitudinal sectional view through the article of furniture showing a hanger therein, the latter being illustrated in full lines in normal position and by dotted lines in adjusted position.

Figure 3 is a vertical longitudinal sectional view through the body of the article of furniture showing the doors closed.

Figure 4 is a horizontal transverse sectional view through the article of furniture.

Similar reference characters indicate corresponding parts throughout the several views in the drawing.

Referring to the drawing in detail, the article of furniture, which in this instance is in the form of a wardrobe comprises a body A, including a base or bottom 5, from which rise the corner pieces 6, these being rabbeted to support and carry opposed side panels or sections 7 and 8, respectively, the latter panel or section carries and has fitted therein a mirror 9. Hung upon the corner pieces 6 are swinging doors 10, which are arranged opposite each other and are adapted to close the body A at the opposite open sides thereof.

The doors 10, each is equipped with and carries a mirror 11 and the ordinary lock 12 and knob 13. Depending from the top 14 of the body A centrally within the latter is a sleeve-like bearing 15 in which is slidably fitted an elongated loop like hanger 16, the lower stretch of which is designed to permit the detachable engagement thereon of the ordinary clothes hangers 17. It will be apparent that the loop-like hanger 16 can be shifted through the open sides of the body A in opposite directions, from the normal position shown by full lines in Figure 2 to the extended positions shown by dotted lines in said figure of the drawing.

It is, of course, understood that the mirrors 9 and 11 are located exteriorly of the article of furniture and when the doors 10 are swung to open position the mirrors 11 carried thereby will cooperate with the mirror 9 carried by the side section 8 of the body A of the article of furniture to effect an adjustable mirror so that the user thereof may view his person or attire from all angles. The swinging doors 10 are readily adjustable to angularly dispose the mirrors 11 therein with relation to the mirror 9 in the side section 8 of the body A of the article of furniture to suit the fancy of the user of the mirrors.

In the use of the article of furniture access can be had from either side thereof to its interior for the storage and removal of articles of wearing apparel in and from the same.

From the foregoing it is thought that the construction and manner of use of the article of furniture will be clearly understood, therefore a more extended explanation has been omitted.

What is claimed is:—

1. In a wardrobe of that type provided with a closed top, bottom, front, rear and a pair of opposed open sides, the combination of a pair of opposed oppositely shiftable doors hinged to the sides of the front, a mirror secured in the outer face of each of said doors, and a mirror secured in the outer face of said front.

2. In a wardrobe of that type provided with a top, a bottom, a front pair of corner pieces connecting the bottom to the top, a rear pair of corner pieces connecting the bottom to the top, a front wall secured between the front pair of corner pieces, a rear wall secured between the rear pair of corner pieces, the combination of a pair of oppositely shiftable doors connected to the front pair of corner pieces and seating in the rear pair of corner pieces when closed, a mirror seated in the outer face of each of said doors, and a mirror seated in the outer face of said front wall.

In testimony whereof, I affix my signature hereto.

FORREST ADDITON.
