(54) **Title:** TRANSGLOBAL MD HEALTH CARE INFORMATION EXCHANGE SYSTEM

Fig. 2

(57) **Abstract:** The remote medical evaluation and suggested treatment system is directed to a unique system that permits subscribing members to receive real time personalized professional telemedicine treatment using Internet video teleconferencing through a central database, administration, and finance hub having detailed medical information generated by the patient. The online physician, in most cases is able to prescribe medical treatment while the patient is at home, office, or while traveling worldwide. This highly secure service can be accessed using any Internet enabled appliance: PC, Laptop, PDA, cell phone or dedicated lifePOD™ unit. These revolutionary new wireless appliances are responsible for the development in the field of remote wireless mobile telemedicine. The medical information gathered and dispersed is immediate and thorough and in many instances better than what physicians in a remote location can assemble in their offices at a short notice.
