(54) **Covering sealing element for roof window**

(57) The invention relates to a covering sealing element for a roof window. It is a soft resilient end cap made of rubber. The front surface of the end cap has a first embedding group element. Correspondingly, at the back surface of the end cap configures a second embedding group element. The first embedding element consists of embedding wall, embedding flange, or embedding piece. The second embedding group element is a vertical embedding wall, which is embedding into a vertical groove constructed at the front surface of the frame side part. A first pressing group piece which presses the surface of the frame and the coverings at the end cap, and a second pressing group piece pressing the bottom surface of the sash covering. Thus, the end cap is fixed at the bottom portion of the frame side covering. It seals between the coverings and between the coverings and the window parts (including the frame and the sash) in all directions, thus prevents rain and dust from entering the window.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 04 38 8081

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
