Inventor.

Walter J. Budington

UNITED STATES PATENT OFFICE.

WALTER J. BUDINGTON, OF LANCASTER, PENNSYLVANIA, ASSIGNOR OF
ONE-HALF OF HIS RIGHT TO FREDERICK L. FREY, OF SAME PLACE.

IMPROVEMENT IN FINGER-GUARDS.

Specification forming part of Letters Patent No. 129,392, dated July 16, 1872.

Specification describing certain Improvements in Finger-Protectors, invented by WALTER J. BUDINGTON, of Lancaster, in the county of Lancaster and State of Pennsylvania.

An instrument to be placed on the finger of the person sewing, either upon the right or left hand, or upon the finger of such hand liable to be pricked while the person is sewing. I claim for the instrument perfect protection to the finger from pricks. I claim for my invention the only method whereby such a result can be arrived at.

It consists in a piece of metal, A, of any

kind, so formed to rest upon the finger, and held there by a strap of leather or other flexible material, B.

What I claim as new, and desire to secure by Letters Patent, is—

As a new article of manufacture, a finger-protector composed of the plate A and elastic or flexible band or strap B, constructed as shown and described.

WALTER J. BUDINGTON.

Attest:

WALTER KIEFFER,
HARRY B. FOREMAN.
