# UNITED STATES PATENT OFFICE.

EVA BAILEY, OF LEITERS FORD, INDIANA.

## SEWING-CHAIR.

No. 884,554. Specification of Letters Patent. Patented April 14, 1908.

Application filed April 26, 1907. Serial No. 370,405.

*To all whom it may concern:*

Be it known that I, EVA BAILEY, a citizen of the United States, residing at Leiters Ford, in the county of Fulton and State of Indiana, have invented certain new and useful Improvements in Sewing-Chairs, of which the following is a specification, reference being had therein to the accompanying drawing.

This invention relates to sewing chairs and has for its object to provide a simple and inexpensive device of this character having different compartments combined in one structure adapted to provide means for keeping the necessary articles of a seamstress.

With these and other objects in view, the invention consists of the novel construction and arrangement of parts hereinafter described and shown, and particularly pointed out in the appended claims.

In the drawings, Figure 1 is a perspective view of a chair constructed in accordance with my invention. Fig. 2 is a sectional view on line 2—2 of Fig. 1. Fig. 3 is a sectional view on line 3—3 of Fig. 2. Fig. 4 is a detail perspective view of the lower portion of the back and the side, showing the receptacle carried thereby.

Referring to the drawings, 1 and 2 designate the sides of my chair which are conveniently mounted on rockers A and B. The rockers A and B, may be of any desired style, and form no part of this invention. Side 2 has rigidly connected thereto, a basket 3 by means of an annular band $3^a$, upon the upper periphery of which, the annular rib $3^b$ rests as clearly shown in Fig. 2. The side 2 also has an arm 4 which is pivotally connected thereto, and which has mounted on its outer end, basket 5. Sides 1 and 2 are hinged to the rear portion of the chair by hinges 6 and 7. When convenience requires, the side 1 may be opened and the arm 4 extended in any direction which will hold basket 5 in a convenient position.

Mounted on the periphery of basket 3, is an upwardly projecting lug 8, which, when the arm 4 carrying the basket 5, is swung around in a position to engage the basket 3, will engage the periphery of the basket 5, that is, its lower portion, as clearly shown in Fig. 4, thus preventing free movement of basket 5. On the side 1, of the chair, is mounted hooks 9 and 10, which are for obvious purposes; also secured to the side 1 is a strip of any suitable material $11^a$, so formed as to provide pockets 11, which support various sewing utensils, for instance, scissors and the like. This strip is also so formed as to support the basket 12, which is utilized for holding various articles, such as needles, cotton of all kinds, thimble, odd buttons scraps and the like.

What is claimed is:

1. A sewing chair, having pivoted sides, an arm pivoted to the outer end of one side, a basket mounted on said arm, a second basket mounted on said side and arranged beneath said first-named basket, and means mounted on one basket for engagement with the other, substantially as described.

2. In a sewing chair, the combination of pivoted sides of an arm pivoted to the outer end of one side and provided with an annular band, a basket supported therein, said side having a fixed annular band, a second basket mounted therein, which will register with the first-named basket, when the said arm is swung parallel with said side, and a lug carried by one basket adapted to engage the other, as and for the purpose specified.

In testimony whereof I hereunto affix my signature in presence of two witnesses.

EVA BAILEY.
