Title: HERBICIDAL COMPOSITION

Abstract: A synergistic composition for selective weed control which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of a) a compound selected from the group of compounds flucarbazone or flucarbazone-sodium, fluorenacet and propoxycarbazone or propoxycarbazone-sodium, and b) at least one compound selected from the group of compounds difluorilnic, fenoxaprop-P-ethyl, idosulfuron-methyl (sodium), bromoxynil, ioxynil, amidosulfuron, diclofop-methyl, isoproturon, flupyradifenyl-methyl (sodium), mesosulfuron, carfentrazone and its ethyl ester, pyraflufen and its ethyl ester, bifenclo and beflubutamid.
Herbicidal composition

The present invention relates to a novel herbicidal synergistic composition comprising a herbicidal active ingredient combination that is suitable for the selective control of weeds in crops of useful plants, for example in cereal crops.

The invention relates also to a method of controlling weeds in crops of useful plants and to the use of the novel composition for that purpose.

The compounds flucarbazone or flucarbazone-sodium and flufenacet are described as herbicides in The Pesticide Manual, 12th Edition (BCPC) 2000. Propoxycarbazone (-sodium) is known from BCPC presentations in Brighton in 1999.

Surprisingly, it has now been found that a combination of variable amounts of flucarbazone or flucarbazone-sodium, flufenacet or propoxycarbazone or propoxycarbazone-sodium with at least one compound from the group diflufenican, fenoxaprop-P-ethyl, iodosulfuron-methyl (sodium), bromoxynil, ioxynil, amidosulfuron, diclofop-methyl, isoproturon, flupyrsulfuron-methyl (sodium), mesosulfuron, carfentrazone and its ethyl ester, pyraflufen and its ethyl ester, bifenox and beflubutamide exhibits a synergistic action that is capable of controlling, both pre-emergence and post-emergence, the majority of weeds occurring especially in crops of useful plants without causing any appreciable damage to the useful plant.

There is therefore proposed in accordance with the present invention a novel synergistic composition for selective weed control which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of
a) a compound selected from the group of compounds flucarbazone, flucarbazone-sodium, flufenacet, propoxycarbazone and propoxycarbazone-sodium, and
b) at least one compound selected from the group of compounds diflufenican, fenoxaprop-P-ethyl, iodosulfuron-methyl-sodium, bromoxynil,ioxynil, amidosulfuron, diclofop-methyl, isoproturon, flupyrsulfuron-methyl-sodium, mesosulfuron, carfentrazone and its ethyl ester, pyraflufen and its ethyl ester, bifenox and bifenonamid.

It is extremely surprising that combinations of those active ingredients exceed the additive action on the weeds to be controlled that is to be expected in principle and thus broaden the range of action of the two active ingredients especially in two respects: firstly, the rates of application of the individual compounds are reduced while a good level of action is maintained and, secondly, the composition according to the invention achieves a high level of weed control also in those cases where the individual substances, in the range of low rates of application, have become useless from the agronomic standpoint. The result is a considerable broadening of the spectrum of weeds and an additional increase in selectivity in respect of the crops of useful plants, as is necessary and desirable in the event of an unintentional overdose of active ingredient. The composition according to the invention, while retaining excellent control of weeds in useful plants, also allows greater flexibility in succeeding crops.

The composition according to the invention can be used against a large number of agronomically important weeds, such as Stellaria, Nasturtium, Agrostis, Digitaria, Avena, Setaria, Sinapis, Lolium, Solanum, Bromus, Apera, Alopecurus, Matricaria, Abutilon, Sida, Xanthium, Aamaranthus, Chenopodium, Ipomoea, Chrysanthemum, Galium, Viola and Veronica. The composition according to the invention is suitable for all methods of application conventionally used in agriculture, e.g. pre-emergence application, post-emergence application and seed dressing. The composition according to the invention is suitable especially for controlling weeds in crops of useful plants such as cereals and maize and more especially for controlling weeds in cereals. "Crops of useful plants" are to be understood as including those which have been made tolerant to herbicides or classes of herbicides as a result of conventional methods of breeding or genetic engineering.

The composition according to the invention comprises the said active ingredients in any mixing ratio, but usually has an excess of one component over the other. Preferred mixing ratios of the active ingredients are from 100:1 to 1:100 and from 50:1 to 1:50.
The following combinations have proved to be especially effective compositions: propoxycarbazone + diflufenican, propoxycarbazone + fenoxaprop-P-ethyl, propoxycarbazone + iodosulfuron-methyl (sodium), propoxycarbazone + ioxynil, propoxycarbazone + mesosulfuron, propoxycarbazone + amidosulfuron, propoxycarbazone + bromoxynil, propoxycarbazone + diclofop-methyl, propoxycarbazone + isoproturon and propoxycarbazone + flupyrdsulfuron-methyl (sodium), flucarbazone (sodium) + diflufenican, flucarbazone (sodium) + fenoxaprop-P-ethyl, flucarbazone (sodium) + iodosulfuron-methyl (sodium), flucarbazone (sodium) + ioxynil, flucarbazone (sodium) + mesosulfuron, flucarbazone (sodium) + amidosulfuron, flucarbazone (sodium) + bromoxynil, flucarbazone (sodium) + diclofop-methyl, flucarbazone (sodium) + isoproturon and flucarbazone (sodium) + flupyrdsulfuron-methyl (sodium), flufenacet + diflufenican, flufenacet + fenoxaprop-P-ethyl, flufenacet + iodosulfuron-methyl (sodium), flufenacet + ioxynil, flufenacet + mesosulfuron, flufenacet +amidosulfuron, flufenacet + bromoxynil, flufenacet + diclofop-methyl, flufenacet + isoproturon and flupyrdsulfuron-methyl (sodium).

The compositions according to the invention may also comprise safeners. There is accordingly also proposed in accordance with the invention a selectively herbicidal composition which, in addition to comprising customary inert formulation adjuvants, such as carriers, solvents and wetting agents, comprises as active ingredient a mixture of a) a compound selected from the group of compounds flucarbazone or flucarbazone-sodium, flufenacet and propoxycarbazone, b) at least one compound selected from the group of compounds diflufenican, fenoxaprop-P-ethyl, iodosulfuron-methyl (sodium), bromoxynil, ioxynil, amidosulfuron, diclofop-methyl, isoproturon, flupyrdsulfuron-methyl (sodium) and mesosulfuron, and c) a safener.

Safeners especially suitable for the composition according to the invention include e.g. fenchlorazole-ethyl, mefenpyr-diethyl and isoxadifen. The first two safeners are known from The Pesticide Manual, 12th Edition (BCPC) 2000; isoxadifen is described e.g. in DE-A-4 331 448.

Especially preferred mixtures in the context of the present invention are those comprising one of the herbicide combinations specifically mentioned above and fenchlorazole-ethyl as safener.

Another group of preferred mixtures includes those comprising one of the herbicide combinations specifically mentioned above and mefenpyr-diethyl as safener.
A further group of preferred mixtures includes those comprising one of the herbicide combinations specifically mentioned above and isoxadifen as safener.

The rate of application may vary within wide limits and depends on the nature of the soil, the method of application (pre- or post-emergence; seed dressing; application to the seed furrow; no tillage application etc.), the crop plant, the weed to be controlled, the prevailing climatic conditions, and other factors governed by the method of application, the time of application and the target crop. The active ingredient mixture according to the invention can generally be applied at a rate of from 0.001 to 1.5 kg of active ingredient mixture per ha.

The mixtures according to the invention may be employed in unmodified form, that is to say as obtained in synthesis. Preferably, however, they are formulated in customary manner, together with the adjuvants conventionally used in formulation technology, such as solvents, solid carriers or surfactants, for example into emulsifiable concentrates, directly sprayable or dilutable solutions, wettable powders, soluble powders, dusts, granules or microcapsules, as described in WO 97/34483, pages 9 to 13. As with the nature of the compositions, the methods of application, such as spraying, atomising, dusting, wetting, scattering or pouring, are chosen in accordance with the intended objectives and the prevailing circumstances.

The formulations, i.e. the media, preparations or compositions comprising the mixtures according to the invention and also, as appropriate, one or more solid or liquid formulation adjuvants, are prepared in a manner known per se, e.g. by intimately mixing and/or grinding the active ingredients with the formulation adjuvants, e.g. solvents or solid carriers. In addition, surface-active compounds (surfactants) may also be used in the preparation of the formulations.

Examples of solvents and solid carriers are given, for example, in WO 97/34485, page 6. Depending on the nature of the active ingredients to be formulated, suitable surface-active compounds are non-ionic, cationic and/or anionic surfactants and surfactant mixtures having good emulsifying, dispersing and wetting properties. Examples of suitable anionic, non-ionic and cationic surfactants are listed, for example, in WO 97/34485, pages 7 and 8. Also suitable for the preparation of the herbicidal compositions according to the invention are the surfactants conventionally employed in formulation technology, which are described, inter alia, in "McCutcheon's Detergents and Emulsifiers Annual" MC Publishing Corp., Ridgewood New Jersey, 1981, Stache, H., "Tensid-Taschenbuch", Carl Hanser Verlag, Munich/Vienna,

The herbicidal formulations usually contain from 0.1 to 99 % by weight, especially from 0.1 to 95 % by weight, of active ingredient mixture, from 1 to 99.9 % by weight of a solid or liquid formulation adjuvant, and from 0 to 25 % by weight, especially from 0.1 to 25 % by weight, of a surfactant.

Whereas commercial products are usually formulated as concentrates, the end user will normally employ dilute formulations. The compositions may also comprise further ingredients, such as stabilisers, e.g. vegetable oils or epoxidised vegetable oils (epoxidised coconut oil, rapeseed oil or soybean oil), antifoams, e.g. silicone oil, preservatives, viscosity regulators, binders, tackifiers and also fertilisers or other active ingredients. Preferred formulations have especially the following compositions:

(% = percent by weight)

The finely ground active ingredient is intimately mixed with the adjuvants, giving a suspension concentrate from which suspensions of any desired concentration can be obtained by dilution with water.

It is often more practical for the active ingredients of the mixtures according to the invention to be formulated separately and to be brought together in the desired mixing ratio in the applicator in the form of a "tank mixture" in water shortly before application.

**Biological Examples:**

**Example B1: Pre-emergence test:**
The test plants are sown in pots under greenhouse conditions. A standard soil is used as cultivation substrate. At a pre-emergence stage the herbicides are applied to the surface of the soil both alone and in admixture. The rates of application are governed by the optimum concentrations determined under field or greenhouse conditions. The tests are evaluated 2 to 4 weeks later (100% action = plant has completely died; 0% action = no phytotoxic action). The mixtures used in this test exhibit good results.

**Example B2: Post-emergence test:**
The test plants are raised to a post-application stage in pots under greenhouse conditions. A standard soil is used as cultivation substrate. At a post-emergence stage the herbicides
are applied to the test plants both alone and in admixture. The rates of application are
governed by the optimum concentrations determined under field or greenhouse conditions.
The tests are evaluated 2 to 4 weeks later (100% action = plant has completely died; 0% action = no phytotoxic action). The mixtures used in this test exhibit good results.
What is claimed is:

1. A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of
   a) a compound selected from the group of compounds flucarbazone, flucarbazone-sodium, flufenacet, propoxycarbazone and propoxycarbazone-sodium, and
   b) at least one compound selected from the group of compounds diflufenican, fenoxaprop-P-ethyl, iodosulfuron-methyl-sodium, bromoxynil, ioxynil, amidosulfuron, diclofop-methyl, isoprotron, flupyrsulfuron-methyl-sodium, mesosulfuron, carfentrazone and its ethyl ester, pyraflufen and its ethyl ester, bifenox and beflubutamid.

2. A composition according to claim 1 comprising as additional component c) a safener.

3. A method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according to claim 1 to act on the crop plant or the locus thereof.

4. A method according to claim 3, wherein the crop plant is a cereal.

INTERNATIONAL SEARCH REPORT

Box I  Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. □ Claims Nos.; because they relate to subject matter not required to be searched by this Authority, namely:

2. □ Claims Nos.; because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:

3. □ Claims Nos.; because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II  Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

see additional sheet

1. □ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.

2. □ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.

3. □ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:

4. □ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

   1-4 (partially)

Remark on Protest

□ The additional search fees were accompanied by the applicant's protest.

□ No protest accompanied the payment of additional search fees.

Form PCT/ISA/210 (continuation of first sheet (1)) (July 1996)
This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. Claims: 1-4 (partially)

   A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:
   a) a compound selected from the group of compounds flucarbazone, flucarbazone-sodium, propoxycarbazone or propoxycarbazone-sodium, and
   b) diflufenican;
   and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

2. Claims: claim 1-4 (partially)

   A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:
   a) a compound selected from the group of compounds flucarbazone, flucarbazone-sodium, propoxycarbazone or propoxycarbazone-sodium, and
   b) at least one of the compounds selected from fenoxaprop-P-ethyl and diclofop-methyl;
   and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

3. Claims: claims 1-4 (partially)

   A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:
   a) a compound selected from the group of compounds flucarbazone, flucarbazone-sodium, propoxycarbazone or propoxycarbazone-sodium, and
   b) iodosulfuron;
   and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

4. Claims: claims 1-4

   A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:
   a) a compound selected from the group of compounds
flucarbazone, flucarbazone-sodium, propoxycarbazone or propoxycarbazone-sodium, and
b) at least one of the compounds selected from bromoxynil
and ioxynil;
and a method of controlling undesired plant growth in crops
of useful plants, which comprises allowing a herbicidally
effective amount of a composition according the said
composition to act on the crop plant or the locus thereof.

5. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to
comprising customary inert formulation adjuvants, comprises
as active ingredient a mixture of:
a) a compound selected from flucarbazone and
flucarbazone-sodium, and
b) amidosulfuron;
and a method of controlling undesired plant growth in crops
of useful plants, which comprises allowing a herbicidally
effective amount of a composition according the said
composition to act on the crop plant or the locus thereof.

6. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to
comprising customary inert formulation adjuvants, comprises
as active ingredient a mixture of:
a) a compound selected from propoxycarbazone and
propoxycarbazone-sodium, and
b) amidosulfuron;
and a method of controlling undesired plant growth in crops
of useful plants, which comprises allowing a herbicidally
effective amount of a composition according the said
composition to act on the crop plant or the locus thereof.

7. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to
comprising customary inert formulation adjuvants, comprises
as active ingredient a mixture of:
a) a compound selected from the group of compounds
flucarbazone, flucarbazone-sodium, propoxycarbazone or
propoxycarbazone-sodium, and
b) isoproturon;
and a method of controlling undesired plant growth in crops
of useful plants, which comprises allowing a herbicidally
effective amount of a composition according the said
composition to act on the crop plant or the locus thereof.

8. Claims: claims (1-4)
A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) a compound selected from flucarbazone and flucarbazone-sodium, and
b) flupyradoxid-sodium;

and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

9. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) a compound selected from propoxycarbazone and propoxycarbazone-sodium, and
b) flupyradoxid-methyl-sodium;

and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

10. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) a compound selected from flucarbazone and flucarbazone-sodium, and
b) mesosulfuron;

and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

11. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) a compound selected from propoxycarbazone and propoxycarbazone-sodium, and
b) mesosulfuron;

and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

12. Claims: claims 1-4 (partially)
A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) a compound selected from the group of compounds flucarbazone, flucarbazone-sodium, propoxycarbazone or propoxycarbazone-sodium, and

b) at least one compound selected from carfentrazone and its ethyl ester;

and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

13. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) a compound selected from the group of compounds flucarbazone, flucarbazone-sodium, propoxycarbazone or propoxycarbazone-sodium, and

b) at least one compound selected from pyraflufen and its ethyl ester;

and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

14. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) a compound selected from the group of compounds flucarbazone, flucarbazone-sodium, propoxycarbazone or propoxycarbazone-sodium, and

b) bifenox;

and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

15. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) a compound selected from the group of compounds flucarbazone, flucarbazone-sodium, propoxycarbazone or propoxycarbazone-sodium, and

b) beflubutamid;
and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

16. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) flufenacet, and
b) diflufenican;
and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

17. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) flufenacet, and
b) at least one compound selected from fenoxaprop-P-ethyl and diclofop-methyl;
and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

18. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) flufenacet, and
b) iodosulfuron;
and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

19. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) flufenacet, and
b) bromoxynil;
and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally
effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

20. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) flufenacet, and
b) ioxynil;

and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

21. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) flufenacet, and
b) amidosulfuron;

and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

22. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) flufenacet, and
b) isoproturon;

and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

23. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:

a) flufenacet, and
b) flupyrdsulfuron-methyl-sodium;

and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.
24. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:
  a) flufenacet, and
  b) mesosulfuron;
and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

25. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:
  a) flufenacet, and
  b) at least one compound selected from carfentrazone and its ethyl ester;
and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

26. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:
  a) flufenacet, and
  b) at least one compound selected from pyraflufen and its ethyl ester;
and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.

27. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:
  a) flufenacet, and
  b) bifenox;
and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.
28. Claims: claims 1-4 (partially)

A herbicidal synergistic composition which, in addition to comprising customary inert formulation adjuvants, comprises as active ingredient a mixture of:
a) flufenacet, and
b) beflubutamid;
and a method of controlling undesired plant growth in crops of useful plants, which comprises allowing a herbicidally effective amount of a composition according the said composition to act on the crop plant or the locus thereof.
