(54) Title: REKEYABLE LOCK CYLINDER

(57) Abstract: A wafer-type lockset that employs wafer assemblies and locking keys to adjustably key the lockset. The wafer assemblies include a base wafer and a re-settable wafer that may be adjustably coupled to the base wafer. The locking keys are movable between a first position, in which the base and re-settable wafers are coupled to one another, and a second position, in which the base and re-settable wafers are uncoupled from one another. A key having a desired key profile may be employed to set or program the lockset. A method for rekeying a lockset is also provided.
