Title: INTERACTIVE BABY TIMER SYSTEM AND METHOD

Abstract: Interactive fun, facts and functionality are incorporated into a pregnancy monitoring device. The system includes a contraction monitoring device and timer which are configured to detect contractions to enable a calculation of the length of the contraction and the time between the contractions. The device provides additional audio and visual information related to the pregnancy. The display may include pregnancy status levels such as: emergency level (go to hospital now), prepare for emergency level (get ready to go to hospital), and no emergency level, along with displaying the fetus at certain developmental stages. The audio device may announce special dates and reminders.
