# UNITED STATES PATENT OFFICE.

PEARL B. HART, OF KENTON, OHIO.

OPTICAL CLAMP-PINCERS.

No. 907,347.

Specification of Letters Patent.

Patented Dec. 22, 1908.

Application filed May 18, 1908. Serial No. 433,549.

*To all whom it may concern:*

Be it known that I, PEARL B. HART, a citizen of the United States, residing at Kenton, in the county of Hardin and State of Ohio, have invented a new and useful Optical Clamp-Pincers, of which the following is the specification.

My invention relates to improvements in an adjustable and supporting clamp pincers, which provides an optician with a handy instrument having a perfect support and equal tension for mounting and dismounting frameless eye glasses.

Reference is to be had to the accompanying drawings, forming a part of this specification, in which similar letters of reference indicate corresponding parts in the several views.

Figure 1 is a perspective view of the clamp pincers. Fig. 2 is a view, showing the application of the clamp pincers in mounting lenses.

In the drawing *a* indicates the body of the pincers. The supporting radial arms of the pincers, by which the lens and frames are supported while mounting and dismounting are shown at *b*. The clamp hooks at the end of the supporting arms are indicated by *c*. The screw slot between the clamp hooks is shown at *d*. The slot in the body of the pincers provided for the adjustable clamp is indicated by *e*. The adjustable tension

clamp operating in the said slot of the pincers is indicated by *f*. The screw lifter at the lower end of the pincers is shown at *g*.

From the foregoing description it can be readily perceived that this instrument provides a useful, convenient and perfect tool for the optician.

Having fully described my invention, what I desire to claim and secure by Letters Patent is:

In an optical clamp pincers, of the nature and for the purpose described, in combination with body of pincers having a slot, provided with an adjustable tension clamp operating therein; of radial arms extending outwardly from the ends of the tongs, of pincers, the said arms provided with clamping hooks, with a screw slot, between the hooks, whereby the said radial arms with clamp hooks, having a screw slot, secure the lens and frame with perfect support and equal tension, while mounting and dismounting eye glasses, substantially described and illustrated as set forth.

In testimony whereof I affix my signature in presence of two witnesses.

PEARL B. HART.
