COCOON SUN SWEAT SUIT

Chan J. Kim, Honolulu, Territory of Hawaii

Application October 6, 1947, Serial No. 778,075

1 Claim. (Cl. 126—270)

1

This invention relates to a health suit which is adapted to provide a sweat in the same manner without the accompanying discomfort that is obtained by the use of a Turkish bath.

An object of the invention is to provide a transparent cocoon or covering that can be worn by an individual in the sun to obtain a good sweat to cleanse the pores of impurities.

It is a well known fact that a good sweat is beneficial to a person's body and many people are constant visitors to Turkish baths for the purpose of obtaining a treatment therein.

With the covering provided by the invention, a person can obtain a good sweat without the use or cost of a Turkish bath, and still obtain the same benefits therefrom.

Office workers or swimmers or sunbathers can don one of these coverings and in a short period of time reap the beneficial effects of a good sweat that is obtainable by the use of the covering.

With the above and other objects and advantages in view, the invention consists of the novel details of construction, arrangement and combination of parts more fully hereinafter described, claimed and illustrated in the accompanying drawing in which:

Figure 1 is a side elevational view of an embodiment of the invention in place on a human body;

Figure 2 is a front or top plan view of Figure 1 and

Figure 3 is an elevational view of the device in use with the person therein in sitting position.

Referring more in detail to the drawing, the embodiment of the invention is generally designated by the reference numeral 5, and comprises a covering similar in all respects to a cocoon. The covering is made of a tough, flexible transparent plastic material having a head and trunk portion 6, to which is attached integral therewith, the leg portions 7 and 8 respectively.

Secured to the leg portions 7 and 8, respectively, in any well known manner, are the boot or foot portions 9 and 10 respectively, which are made of a heavy canvas or soft leather to permit a person wearing the cover to walk about if desired.

Positioned in the head portion in alinement with the person's eyes, is an elliptical shaped eye shade 11 which is secured in place in any well known manner.

The device is supposed to be used in the outdoors in the direct rays of the sun so the eyeshade is used to protect the person's eyes from the glare of the sun.

Entrance is gained to the cover by means of the slide fastener 12 operating on the tracks 13

2

in the conventional manner. The fastener 12 has the pull 14 positioned on the interior of the cover so that the fastener can be operated by a person enclosed in the cover.

Should the air within the cover become stagnant, the slide fastener which, when the tracks are closed, is in alinement with the person's nose, can be opened slightly to permit breathing of the outside air. This, however, does not admit sufficient air to prevent the person from obtaining a good sweat.

While in the covering, the person can recline as shown in Figures 1 and 2, sit down as shown in Figure 3, or walk as desired. The boot portion 15 prevents wearing of the covering while walking therein.

There has thus been provided, a device which is accessible at all times when it is desired to obtain a good sweat, since it is light and can be easily carried. In use, it will function in the same manner as a Turkish bath, and give the same beneficial result.

It is handy for people who desire to lose weight by this method, and is easily cleaned so that more than one person can use it at different times without danger of contamination from its previous occupant.

It is believed that from the foregoing description, the construction and use, as well as the advantages of the invention will be apparent to those skilled in the art, and it is to be understood that changes in the minor details of construction, arrangement and combination of parts may be made, without departing from the spirit of the invention and the scope of the appended claim.

Having thus described the invention, what is claimed as new and desired to be secured by Letters Patent is:

A health suit of the character described comprising a transparent plastic covering of a size to fit a human body, said covering having a head and trunk portion and two leg portions, a sunshade in said head portion, canvas feet portions on said leg portions and fastening means permitting the entrance and exit of said body from said covering.
