6428X

G. Shetter,

Wood Auger.

Patented Mar. 21, 1831.

If 6428x Mar. 21, 1831

George Shetler A Citizen of the United States. Letters Patent.
The Schedule referred to in these Letters Patent & making part of the same, containing a description in the words of the said George Shetler himself of his improvement in the "Serpentine Screw Auger."

Be it known that I George Shetler, of the Borough of York, in the County of York & State of Pennsylvania, have invented a new & useful improvement in the Auger, called the "Serpentine Screw Auger" and that the following is a full and exact description of the said Auger as invented by me.

This Auger differs from the common Auger and also from the Serpentine Screw Auger, invented by me & Patented September 10th A.D. 1829. in as much as it has a double bit, and the former has a single bit; the shaft or stem A. and Spiral or B, winding in a serpentine manner, the nib or bit C. and common screw D. are the same as in the original; the difference is in the additional bit E. which makes this Auger far superior, in as much as it bores steadier, easier & cuts through much better than the former.
