(54) Title: USE OF S1P RECEPTOR AGONISTS IN HEART DISEASES

(57) Abstract: The invention relates to the use of a sphingosine-1-phosphate receptor agonist in the treatment of heart diseases.

WO 2004/010987 A2

Use of S1P receptor agonists in heart diseases

The present invention relates to a new use for a sphingosine-1-phosphate (S1P) receptor agonist, particularly in the treatment of heart diseases.

S1P receptor agonists are accelerating lymphocyte homing agents which elicit a lymphopenia resulting from a re-distribution, preferably reversible, of lymphocytes from circulation to secondary lymphatic tissue, without evoking a generalized immunosuppression. Naïve cells are sequestered; CD4 and CD8 T-cells and B-cells from the blood are stimulated to migrate into lymph nodes (LN) and Peyer's patches (PP), and thus for example infiltration of cells into transplanted organs is inhibited.

S1P receptor agonists are typically sphingosine analogues, such as 2-substituted 2-amino-propane-1,3-diol or 2-amino-propanol derivatives, e.g. a compound comprising a group of formula X

wherein

Z is H; C₁₋₆alkyl; C₂₋₆alkenyl; C₂₋₆alkynyl; phenyl; phenyl substituted by OH; C₁₋₆alkyl substituted by 1 to 3 substituents selected from the group consisting of halogen, C₃₋₈cycloalkyl, phenyl and phenyl substituted by OH; or CH₂-R_{4z} wherein R_{4z} is OH, acyloxy or a residue of formula (a)

wherein Z₁ is a direct bond or O, preferably O; each of R_{5z} and R_{6z}, independently, is H, or C₁₋₄alkyl optionally substituted by 1, 2 or 3 halogen atoms;

R_{1z} is OH, acyloxy or a residue of formula (a); and each of R_{2z} and R_{3z}, independently, is H, C₁₋₄alkyl or acyl.

Group of formula X is a functional group attached as a terminal group to a moiety which may be hydrophilic or lipophilic and comprise one or more aliphatic, alicyclic, aromatic and/or heterocyclic residues, to the extent that the resulting molecule wherein at least one of Z and

- 2 -

R₁₂ is or comprises a residue of formula (a), signals as an agonist at one of more sphingosine-1-phosphate receptor.

S1P receptor agonists are compounds which signal as agonists at one or more sphingosine-1 phosphate receptors, e.g. S1P1 to S1P8. Agonist binding to a S1P receptor may e.g. result in dissociation of intracellular heterotrimeric G-proteins into Gα-GTP and Gβγ-GTP, and/or increased phosphorylation of the agonist-occupied receptor and activation of downstream signaling pathways/kinases. The binding affinity of S1P receptor agonists may be measured as described at paragraph I. below. Preferred S1P receptor agonists are those targeting e.g. S1P2 and/or S1P3.

Examples of appropriate S1P receptor agonists are, for example:

- Compounds as disclosed in EP627406A1, e.g. a compound of formula I

wherein R₁ is a straight- or branched (C₁₂₋₂₂)carbon chain

- which may have in the chain a bond or a hetero atom selected from a double bond, a triple bond, O, S, NR₆, wherein R₆ is H, alkyl, aralkyl, acyl or alkoxycarbonyl, and carbonyl, and/or

- which may have as a substituent alkoxy, alkenyloxy, alkynyloxy, aralkyloxy, acyl, alkylamino, alkylthio, acylamino, alkoxycarbonyl, alkoxycarbonylamino, acyloxy, alkylcarbonyl, nitro, halogen, amino, hydroxyimino, hydroxy or carboxy; or

R₁ is

- a phenylalkyl wherein alkyl is a straight- or branched (C₆₋₂₀)carbon chain; or
- a phenylalkyl wherein alkyl is a straight- or branched (C₁₋₃₀)carbon chain wherein said phenylalkyl is substituted by
- a straight- or branched (C₆₋₂₀)carbon chain optionally substituted by halogen,
- a straight- or branched (C₆₋₂₀)alkoxy chain optionally substituted by halogen,
- a straight- or branched (C₆₋₂₀)alkenyloxy,
- phenylalkoxy, halophenylalkoxy, phenylalkoxyalkyl, phenoxyalkoxy or phenoxyalkyl,
- cycloalkylalkyl substituted by C₆₋₂₀alkyl,
- heteroarylalkyl substituted by C₆₋₂₀alkyl,
- heterocyclic C₆₋₂₀alkyl or

- 3 -

- heterocyclic alkyl substituted by C₂₋₂₀alkyl,

and wherein

the alkyl moiety may have

- in the carbon chain, a bond or a heteroatom selected from a double bond, a triple bond, O, S, sulfinyl, sulfonyl, or NR₆, wherein R₆ is as defined above, and

- as a substituent alkoxy, alkenyloxy, alkynyloxy, aralkyloxy, acyl, alkylamino, alkylthio, acylamino, alkoxycarbonyl, alkoxycarbonylamino, acyloxy, alkylcarbamoyl, nitro, halogen, amino, hydroxy or carboxy, and

each of R₂, R₃, R₄ and R₅, independently, is H, C₁₋₄ alkyl or acyl

or a pharmaceutically acceptable salt thereof;

- Compounds as disclosed in EP 1002792A1, e.g. a compound of formula II

wherein m is 1 to 9 and each of R'₂, R'₃, R'₄ and R'₅, independently, is H, alkyl or acyl, or a pharmaceutically acceptable salt thereof;

- Compounds as disclosed in EP0778263 A1, e.g. a compound of formula III

wherein W is H; C₁₋₆alkyl, C₂₋₆alkenyl or C₂₋₆alkynyl; unsubstituted or by OH substituted phenyl; R''₄O(CH₂)_n; or C₁₋₆alkyl substituted by 1 to 3 substituents selected from the group consisting of halogen, C₃₋₈cycloalkyl, phenyl and phenyl substituted by OH;

X is H or unsubstituted or substituted straight chain alkyl having a number p of carbon atoms or unsubstituted or substituted straight chain alkoxy having a number (p-1) of carbon atoms, e.g. substituted by 1 to 3 substituents selected from the group consisting of C₁₋₆ alkyl, OH, C₁₋₆alkoxy, acyloxy, amino, C₁₋₆alkylamino, acylamino, oxo, haloC₁₋₆alkyl, halogen, unsubstituted phenyl and phenyl substituted by 1 to 3 substituents selected from the group consisting of C₁₋₆alkyl, OH, C₁₋₆alkoxy, acyl, acyloxy, amino, C₁₋₆alkylamino, acylamino, haloC₁₋₆alkyl and halogen; Y is H, C₁₋₆alkyl, OH, C₁₋₆alkoxy, acyl, acyloxy, amino, C₁₋

₆alkylamino, acylamino, haloC₁₋₆alkyl or halogen, Z₂ is a single bond or a straight chain alkylene having a number of carbon atoms of q,
 each of p and q, independently, is an integer of 1 to 20, with the proviso of 6≤p+q≤23, m' is 1, 2 or 3, n is 2 or 3,
 each of R''₁, R''₂, R''₃ and R''₄, independently, is H, C₁₋₄alkyl or acyl,
 or a pharmaceutically acceptable salt thereof,
 - Compounds as disclosed in WO02/18395, e.g. a compound of formula IVa or IVb

wherein X_a is O, S, NR_{1s} or a group $-(CH_2)_{n_a}-$, which group is unsubstituted or substituted by 1 to 4 halogen; n_a is 1 or 2, R_{1s} is H or (C_{1-4}) alkyl, which alkyl is unsubstituted or substituted by halogen; R_{1a} is H, OH, (C_{1-4}) alkyl or $O(C_{1-4})$ alkyl wherein alkyl is unsubstituted or substituted by 1 to 3 halogen; R_{1b} is H, OH or (C_{1-4}) alkyl, wherein alkyl is unsubstituted or substituted by halogen; each R_{2a} is independently selected from H or (C_{1-4}) alkyl, which alkyl is unsubstituted or substituted by halogen; R_{3a} is H, OH, halogen or $O(C_{1-4})$ alkyl wherein alkyl is unsubstituted or substituted by halogen; and R_{3b} is H, OH, halogen, (C_{1-4}) alkyl wherein alkyl is unsubstituted or substituted by hydroxy, or $O(C_{1-4})$ alkyl wherein alkyl is unsubstituted or substituted by halogen; Y_a is $-CH_2-$, $-C(O)-$, $-CH(OH)-$, $-C(=NOH)-$, O or S, and R_{4a} is (C_{4-14}) alkyl or (C_{4-14}) alkenyl;

or a pharmaceutically acceptable salt or hydrate thereof;

- Compounds as disclosed in WO 02/076995, e.g. a compound of formula V

wherein

m_c is 1, 2 or 3;

X_c is 0 or a direct bond;

R_{1c} is H; C₁₋₆ alkyl optionally substituted by OH, acyl, halogen, C₃₋₁₀cycloalkyl, phenyl or hydroxy-phenylene; C₂₋₆alkenyl; C₂₋₆alkynyl; or phenyl optionally substituted by OH;

R_{2c} is

wherein R_{5c} is H or C₁₋₄alkyl optionally substituted by 1, 2 or 3 halogen atoms, and R_{6c} is H or C₁₋₄alkyl optionally substituted by halogen;

each of R_{3c} and R_{4c}, independently, is H, C₁₋₄alkyl optionally substituted by halogen, or acyl, and

R_c is C₁₃₋₂₀alkyl which may optionally have in the chain an oxygen atom and which may optionally be substituted by nitro, halogen, amino, hydroxy or carboxy; or a residue of formula (a)

wherein R_{7c} is H, C₁₋₄alkyl or C₁₋₄alkoxy, and R_{8c} is substituted C₁₋₂₀alkanoyl, phenylC₁₋₁₄alkyl wherein the C₁₋₁₄alkyl is optionally substituted by halogen or OH, cycloalkylC₁₋₁₄alkoxy or phenylC₁₋₁₄alkoxy wherein the cycloalkyl or phenyl ring is optionally substituted by halogen, C₁₋₄alkyl and/or C₁₋₄alkoxy, phenylC₁₋₁₄alkoxy-C₁₋₁₄alkyl, phenoxyC₁₋₁₄alkoxy or phenoxyC₁₋₁₄alkyl,

R_c being also a residue of formula (a) wherein R_{8c} is C₁₋₁₄alkoxy when R_{1c} is C₁₋₄alkyl, C₂₋₆alkenyl or C₂₋₆alkynyl,

or a compound of formula VI

wherein

n_x is 2, 3 or 4

- 6 -

R_{1x} is H; C_{1-6} alkyl optionally substituted by OH, acyl, halogen, cycloalkyl, phenyl or hydroxy-phenylene; C_{2-6} alkenyl; C_{2-6} alkynyl; or phenyl optionally substituted by OH;

R_{2x} is H, C_{1-4} alkyl or acyl

each of R_{3x} and R_{4x} , independently is H, C_{1-4} alkyl optionally substituted by halogen or acyl,

R_{5x} is H, C_{1-4} alkyl or C_{1-4} alkoxy, and

R_{6x} is C_{1-20} alkanoyl substituted by cycloalkyl; cycloalkyl C_{1-14} alkoxy wherein the cycloalkyl ring is optionally substituted by halogen, C_{1-4} alkyl and/or C_{1-4} alkoxy; phenyl C_{1-14} alkoxy wherein the phenyl ring is optionally substituted by halogen, C_{1-4} alkyl and/or C_{1-4} alkoxy, R_{6x} being also C_{4-14} alkoxy when R_{1x} is C_{2-4} alkyl substituted by OH, or pentyloxy or hexyloxy when R_{1x} is C_{1-4} alkyl,

provided that R_{6x} is other than phenyl-butylenoxy when either R_{5x} is H or R_{1x} is methyl, or a pharmaceutically acceptable salt thereof;

- Compounds as disclosed in WO02/06268A1, e.g. a compound of formula VII

wherein each of R_{1d} and R_{2d} , independently, is H or an amino-protecting group;

R_{3d} is hydrogen, a hydroxy-protecting group or a residue of formula

R_{4d} is lower alkyl;

n_d is an integer of 1 to 6;

X_d is ethylene, vinylene, ethynylene, a group having a formula $-D-CH_2-$ (wherein D is carbonyl, $-CH(OH)-$, O, S or N), aryl or aryl substituted by up to three substituents selected from group a as defined hereinafter;

Y_d is single bond, C_{1-10} alkylene, C_{1-10} alkylene which is substituted by up to three substituents selected from groups a and b, C_{1-10} alkylene having O or S in the middle or end of the carbon chain, or C_{1-10} alkylene having O or S in the middle or end of the carbon chain which is substituted by up to three substituents selected from groups a and b;

R_{5d} is hydrogen, cycloalkyl, aryl, heterocycle, cycloalkyl substituted by up to three substituents selected from groups a and b, aryl substituted by up to three substituents

- 7 -

selected from groups a and b, or heterocycle substituted by up to three substituents selected from groups a and b;

each of R_{6d} and R_{7d} , independently, is H or a substituent selected from group a;

each of R_{8d} and R_{9d} , independently, is H or C_{1-4} alkyl optionally substituted by halogen;

<group a > is halogen, lower alkyl, halogeno lower alkyl, lower alkoxy, lower alkylthio, carboxyl, lower alkoxycarbonyl, hydroxy, lower aliphatic acyl, amino, mono-lower alkylamino, di-lower alkylamino, lower aliphatic acylamino, cyano or nitro; and

<group b > is cycloalkyl, aryl, heterocycle, each being optionally substituted by up to three substituents selected from group a;

with the proviso that when R_{5d} is hydrogen, Y_d is either a single bond or linear C_{1-10} alkylene, or a pharmacologically acceptable salt or ester thereof;

-Compounds as disclosed in JP-14316985 (JP2002316985), e.g. a compound of formula VIII:

wherein $R_{1e}, R_{2e}, R_{3e}, R_{4e}, R_{5e}, R_{6e}, R_{7e}, n_e, X_e$ and Y_e are as disclosed in JP-14316985; or a pharmacologically acceptable salt or ester thereof;

-Compounds as disclosed in WO 03/29184 and WO 03/29205, e.g. compounds of formula IX

wherein X_f is O or S, and R_{1f}, R_{2f}, R_{3f} and n_f are as disclosed in WO 03/29184 and O3/29205, each of R_{4f} and R_{5f} , independently is H or a residue of formula

wherein each of R_{8f} and R_{9f} , independently, is H or C_{1-4} alkyl optionally substituted by halogen; e.g. 2-amino-2-[4-(3-benzyloxyphenoxy)-2-chlorophenyl]propyl-1,3-propane-diol or

2-amino-2-[4-(benzyloxyphenylthio)-2-chlorophenyl]propyl-1,3-propane-diol, or a pharmacological salt thereof.

In each case where citations of patent applications are given, the subject matter relating to the compounds is hereby incorporated into the present application by reference.

Acyl may be a residue $R_y\text{-CO-}$ wherein R_y is C_{1-6} alkyl, C_{3-6} cycloalkyl, phenyl or phenyl- C_{1-4} alkyl. Unless otherwise stated, alkyl, alkoxy, alkenyl or alkynyl may be straight or branched.

When in the compounds of formula I the carbon chain as R_1 is substituted, it is preferably substituted by halogen, nitro, amino, hydroxy or carboxy. When the carbon chain is interrupted by an optionally substituted phenylene, the carbon chain is preferably unsubstituted. When the phenylene moiety is substituted, it is preferably substituted by halogen, nitro, amino, methoxy, hydroxy or carboxy.

Preferred compounds of formula I are those wherein R_1 is C_{13-20} alkyl, optionally substituted by nitro, halogen, amino, hydroxy or carboxy, and, more preferably those wherein R_1 is phenylalkyl substituted by C_{6-14} -alkyl chain optionally substituted by halogen and the alkyl moiety is a C_{1-6} alkyl optionally substituted by hydroxy. More preferably, R_1 is phenyl- C_{1-6} alkyl substituted on the phenyl by a straight or branched, preferably straight, C_{6-14} alkyl chain. The C_{6-14} alkyl chain may be in ortho, meta or para, preferably in para.

Preferably each of R_2 to R_5 is H.

A preferred compound of formula I is 2-amino-2-tetradecyl-1,3-propanediol. A particularly preferred S1P receptor agonist of formula I is FTY720, *i.e.* 2-amino-2-[2-(4-octylphenyl)ethyl]propane-1,3-diol in free form or in a pharmaceutically acceptable salt form (referred to hereinafter as Compound A), e.g. the hydrochloride, as shown:

A preferred compound of formula II is the one wherein each of R'_2 to R'_5 is H and m is 4, *i.e.* 2-amino-2-[2-[4-(1-oxo-5-phenylpentyl)phenyl]ethyl]propane-1,3-diol, in free form or in pharmaceutically acceptable salt form (referred to hereinafter as Compound B), e.g. the hydrochloride.

A preferred compound of formula III is the one wherein W is CH₃, each of R''₁ to R''₃ is H, Z₂ is ethylene, X is heptyloxy and Y is H, i.e. 2-amino-4-(4-heptyloxyphenyl)-2-methyl-butanol, in free form or in pharmaceutically acceptable salt form (referred to hereinafter as Compound C), e.g. the hydrochloride. The R-enantiomer is particularly preferred.

A preferred compound of formula IVa is the FTY720-phosphate (R_{2a} is H, R_{3a} is OH, X_a is O, R_{1a} and R_{1b} are OH). A preferred compound of formula IVb is the Compound C-phosphate (R_{2a} is H, R_{3b} is OH, X_a is O, R_{1a} and R_{1b} are OH, Y_a is O and R_{4a} is heptyl). A preferred compound of formula V is Compound B-phosphate.

A preferred compound of formula V is phosphoric acid mono-[(R)-2-amino-2-methyl-4-(4-pentyloxy-phenyl)-butyl]ester.

A preferred compound of formula VIII is (2R)-2-amino-4-[3-(4-cyclohexyloxybutyl)-benzo[b]thien-6-yl]-2-methylbutan-1-ol.

When the compounds of formulae I to IX have one or more asymmetric centers in the molecule, the present invention is to be understood as embracing the various optical isomers, as well as racemates, diastereoisomers and mixtures thereof are embraced. Compounds of formula III or IVb, when the carbon atom bearing the amino group is asymmetric, have preferably the R-configuration at this carbon atom.

Examples of pharmaceutically acceptable salts of the compounds of the formulae I to IX include salts with inorganic acids, such as hydrochloride, hydrobromide and sulfate, salts with organic acids, such as acetate, fumarate, maleate, benzoate, citrate, malate, methanesulfonate and benzenesulfonate salts, or, when appropriate, salts with metals such as sodium, potassium, calcium and aluminium, salts with amines, such as triethylamine and salts with dibasic amino acids, such as lysine. The compounds and salts of the methods of the present invention encompass hydrate and solvate forms.

The S1P receptor agonists have, on the basis of observed activity, e.g. homing of lymphocytes, e.g. as described in EP627406A1 or USP 6,004,565, been found to be useful e.g. as immunosuppressant, e.g. in the treatment of acute allograft rejection.

It has now been found that S1P receptor agonists have a beneficial effect in heart diseases, e.g. in chronic heart failure, congestive heart failure, complications of cardiovascular surgery, peri-operative hypertension, unstable angina or acute myocardial infarction.

Chronic heart failure is a clinical syndrome characterized by distinctive symptoms and signs resulting from disturbances in cardiac output, e.g. inadequate for the body's needs. It is often

associated with other changes such as cardiac hypertrophy and myocardial ischemia. Congestive heart failure (CHF), or heart failure, is a condition in which the heart cannot pump enough blood to the body's other organs. As blood flow out of the heart slows, blood returning to the heart through the veins backs up, causing congestion in the tissues.

In accordance with the particular findings of the present invention, there is provided:

- 1.1 A method for treating chronic heart failure in a subject in need thereof comprising administering to said subject a therapeutically effective amount of a S1P receptor agonist;
- 1.2 A method for improving heart energy efficiency and/or reducing its oxygen needs in a subject in need thereof comprising administering to said subject a therapeutically effective amount of a S1P receptor agonist;
- 1.3 A method for improving cardiac output in a subject in need thereof comprising administering to said subject a therapeutically effective amount of a S1P receptor agonist;
- 1.4 A method for treating arrhythmia or tachyarrhythmia, e.g. atrial fibrillation, atrial flutter or sinus ventricular tachycardia, in a subject in need thereof comprising administering to said subject a therapeutically effective amount of a S1P receptor agonist;
- 1.5 A method for treating congestive heart failure in a subject in need thereof comprising administering to said subject a therapeutically effective amount of a S1P receptor agonist;

The method of the invention is also appropriate for patients with acutely decompensated congestive heart failure and patients with pre-existing arrhythmias.

- 1.6 A method for treating complications of cardiovascular surgery, e.g. peri-operative hypertension, in a subject in need thereof comprising administering to said subject a therapeutically effective amount of a S1P receptor agonist;
- 1.7 A method for treating unstable angina in a subject in need thereof comprising administering to said subject a therapeutically effective amount of a S1P receptor agonist;
- 1.8 A method for treating acute myocardial infarction in a subject in need thereof comprising administering to said subject a therapeutically effective amount of a S1P receptor agonist.

2. A S1P receptor agonist, e.g. a compound of formula I or a pharmaceutically acceptable salt thereof, for use in a method as defined under 1.1 to 1.8 above; or
3. A S1P receptor agonist, e.g. a compound of formula I or a pharmaceutically acceptable salt thereof, for use in the preparation of a pharmaceutical composition for use in a method as defined under 1.1 to 1.8 above; or
4. A pharmaceutical composition for use in a method as defined under 1.1 to 1.8 above comprising a S1P receptor agonist, e.g. a compound of formula I or a pharmaceutically acceptable salt thereof, together with one or more pharmaceutically acceptable diluents or carriers therefor.

Utility of the S1P receptor agonists, e.g. in the treatment of heart diseases, as hereinabove specified, may be demonstrated in animal test methods as well as in clinic, for example in accordance with the methods hereinafter described.

A. Binding affinity of S1P receptor agonists to individual human S1P receptors may be determined in following assays:

Transient transfection of human S1P receptors into HEK293 cells

S1P receptors and G_i proteins are cloned, and equal amounts of 4 cDNAs for the S1P receptor, $G_i\alpha$, $G_i\beta$ and $G_i\gamma$ are mixed and used to transfect monolayers of HEK293 cells using the calcium phosphate precipitate method (M. Wigler et al., Cell. 1977;11;223 and D.S. Im et al., Mol. Pharmacol. 2000;57;753). Briefly, a DNA mixture containing 25 μ g of DNA and 0.25 M CaCl₂ is added to HEPES-buffered 2 mM Na₂HPO₄. Subconfluent monolayers of HEK293 cells are poisoned with 25 mM chloroquine, and the DNA precipitate is then applied to the cells. After 4 h, the monolayers are washed with phosphate-buffered saline and refed media (90% 1:1 Dulbecco's modified essential media (DMEM):F-12 + 10% fetal bovine serum). The cells are harvested 48-72 h after addition of the DNA by scraping in HME buffer (in mM: 20 HEPES, 5 MgCl₂, 1 EDTA, pH 7.4) containing 10% sucrose on ice, and disrupted using a Dounce homogenizer. After centrifugation at 800xg, the supernatant is diluted with HME without sucrose and centrifuged at 100,000xg for 1h. The resulting pellet is rehomogenized and centrifuged a second hour at 100,000xg. This crude membrane pellet is resuspended in HME with sucrose, aliquoted, and snap-frozen by immersion in liquid nitrogen. The membranes are stored at -70°C. Protein concentration is determined spectroscopically by Bradford protein assay.

GTP γ S binding assay using S1P receptor/HEK293 membrane preparations

- 12 -

GTP γ S binding experiments are performed as described by DS. Im et al., Mol. Pharmacol. 2000; 57:753. Ligand-mediated GTP γ S binding to G-proteins is measured in GTP binding buffer (in mM: 50 HEPES, 100 NaCl, 10 MgCl₂, pH 7.5) using 25 μ g of a membrane preparation from transiently transfected HEK293 cells. Ligand is added to membranes in the presence of 10 μ M GDP and 0.1 nM [³⁵S]GTP γ S (1200 Ci/mmol) and incubated at 30°C for 30 min. Bound GTP γ S is separated from unbound using the Brandel harvester (Gaithersburg, MD) and counted with a liquid scintillation counter.

B. In vivo

The effect of a S1P receptor agonist, e.g. a compound of formula I on chronic heart failure is tested in rabbits where heart failure is induced as a consequence of a large myocardial infarction (RP. Hof et al. J. Cardiovasc. Pharmacol., 1991, 18,361-368). The changes of atrial natriuretic factor or baroflex sensitivity are a reliable indicator of the status of the heart failure in this animal model. When administered i.v. at a dose of from 0.1 to 10 mg/kg, a S1P receptor agonist, e.g. the compounds of formula I, e.g. Compound A, have a beneficial effect on the heart failure.

C. Clinical Trial

Patients with class IV congestive heart failure are selected: they have elevated intracardiac filling pressures (orthopnea, abdominal discomfort attributed to hepato-splenic congestion, peripheral edema, ascites, rales and jugular venous distension) and inadequate peripheral perfusion. Patients receive a daily dose of the S1P receptor agonist to be tested, e.g. Compound A in free form or a pharmaceutically acceptable salt thereof, e.g. orally, during 2 or 4 weeks or 3 months. The dose may be escalated if necessary. Patients are followed-up for 6 months. Following data are collected during hospitalization and the 6 month follow-up: blood pressure, weight, electrocardiogram, echocardiogram, serum electrolytes, natriuretic hormone profile and exercise stress tests.

A beneficial effect is observed.

Daily dosages required in practicing the method of the present invention will vary depending upon, for example, the compound used, the host, the mode of administration, the severity of the condition to be treated. A preferred daily dosage range is about from 0.03 to 2.5 mg/kg per day as a single dose or in divided doses. Suitable daily dosages for patients are on the order of from e.g. 0.5 to 50 mg p.o. Suitable unit dosage forms for oral administration comprise from ca. 0.1 to 25 mg active ingredient, e.g. FTY720, e.g. in hydrochloride form, together with one or more pharmaceutically acceptable diluents or carriers therefor. As an

alternative, the S1P receptor agonist may also be administered twice or three times a week, e.g. at a dosage as indicated above.

The S1P receptor agonist may be administered by any conventional route, in particular enterally, e.g. orally, for example in the form of solutions for drinking, tablets or capsules or parenterally, for example in the form of injectable solutions or suspensions. Pharmaceutical compositions comprising a S1P receptor agonist, e.g. a compound of formula I may be manufactured in conventional manner, e.g. as described in EP-A1-627,406 or in EP-A1-1,002,792.

The S1P receptor agonists may be administered as the sole ingredient or together with other drugs, e.g. an angiotensin converting enzyme inhibitor, e.g. benazepril, captopril, quinapril, ramipril, enalapril, lisinopril or moexipril, an angiotensin II receptor antagonist, e.g. valsartan, losartan, irbesartan, eprosartan, forasartan, olmesartan, ripisartan, saprisartan, candesartan, tasosartan or telmisartan, a synthetic form of B-type natriuretic peptide (BNP) or other human B-type natriuretic peptide, e.g. nesiritide, other drugs used in patients with heart failure, e.g. digoxin or digitalis preparations, a β -blocker, e.g. propranolol, atenolol, a β -adrenergic receptor agonist, e.g. salbutamol, an α -2 receptor agonist, e.g. dexmetomidine, a calcium antagonist, e.g. cilnidipine, or a diuretic, e.g. hydrochlorothiazide or spironolactone.

Where the S1P receptor agonists are administered in conjunction with other drugs, dosages of the co-administered compound will of course vary depending on the type of co-drug employed, on the specific drug employed, on the condition to be treated, and so forth. The terms "co-administration" or "combined administration" or the like as utilized herein are meant to encompass administration of the selected therapeutic agents to a single patient, and are intended to include treatment regimens in which the agents are not necessarily administered by the same route of administration or at the same time.

In accordance with the foregoing the present invention provides in a yet further aspect:

5. A pharmaceutical combination comprising a) a first agent which is a S1P receptor agonist, e.g. a compound of formula I, e.g. FTY720, or Compound B or C or a compound of formula V or VIII, or a phosphate thereof, or a pharmaceutically acceptable salt thereof, and b) a co-agent, e.g. a second drug agent as defined above.
6. A method as defined above comprising co-administration, e.g. concomitantly or in sequence, of a therapeutically effective amount of a S1P receptor agonist, e.g. a compound of formula I, e.g. FTY720, or Compound B or C, or a compound of formula

V or VIII, or a phosphate thereof, or a pharmaceutically acceptable salt thereof, and a second drug substance, e.g. as indicated above.

S1P receptor agonists are well tolerated at dosages required for use in accordance with the present invention. For example, FTY720 has an acute LD₅₀ > 10 mg/kg p.o. in rats and monkeys.

The administration of a pharmaceutical combination of the invention results in a beneficial effect, e.g. a synergistic therapeutic effect, less side-effects or an improved quality of life compared to a monotherapy.

CLAIMS

1. A S1P receptor agonist for use in the preparation of a pharmaceutical composition for use in the treatment of chronic heart failure, congestive heart failure, arrhythmia or tachyarrhythmia, unstable angina, acute myocardial infarction or complications from cardiac surgery or for improving heart energy efficiency or cardiac output.
2. A S1P receptor agonist for use in the treatment of chronic heart failure, congestive heart failure, arrhythmia or tachyarrhythmia, unstable angina, acute myocardial infarction or complications from cardiac surgery or for improving heart energy efficiency or cardiac output.
3. A pharmaceutical composition for use in the treatment of chronic heart failure, congestive heart failure, arrhythmia or tachyarrhythmia, unstable angina, acute myocardial infarction or complications from cardiac surgery, or for improving heart energy efficiency or cardiac output, comprising a S1P receptor agonist together with one or more pharmaceutically acceptable diluents or carriers therefor.
4. A method for treating chronic heart failure, congestive heart failure, arrhythmia or tachyarrhythmia, unstable angina, acute myocardial infarction or complications from cardiac surgery or for improving heart energy efficiency or cardiac output in a subject in need thereof, comprising administering to said subject a therapeutically effective amount of a S1P receptor agonist.
5. A pharmaceutical combination comprising a) a first agent which is a S1P receptor agonist, and b) a co-agent selected from an angiotensin converting enzyme inhibitor, an angiotensin II receptor antagonist, a synthetic form of B-type natriuretic peptide (BNP) or other human B-type natriuretic peptide, a β -blocker, a β -adrenergic receptor agonist, an α -2 receptor agonist, a calcium antagonist and a diuretic.
6. A method according to claim 4 comprising co-administration concomitantly or in sequence, of a therapeutically effective amount of a S1P receptor agonist and a co-agent selected from an angiotensin converting enzyme inhibitor, an angiotensin II receptor antagonist, a synthetic form of B-type natriuretic peptide (BNP) or other human B-type natriuretic peptide, a β -blocker, a β -adrenergic receptor agonist, an α -2 receptor agonist, a calcium antagonist and a diuretic.

- 16 -

7. Use, a pharmaceutical composition, a pharmaceutical combination or a method according to claims 1 to 6, wherein the S1P receptor agonist is selected from a compound of formula I

wherein R₁ is a straight- or branched (C₁₂₋₂₂)carbon chain

- which may have in the chain a bond or a hetero atom selected from a double bond, a triple bond, O, S, NR₆, wherein R₆ is H, alkyl, aralkyl, acyl or alkoxycarbonyl, and carbonyl, and/or

- which may have as a substituent alkoxy, alkenyloxy, alkynyloxy, aralkyloxy, acyl, alkylamino, alkylthio, acylamino, alkoxycarbonyl, alkoxycarbonylamino, acyloxy, alkylcarbamoyl, nitro, halogen, amino, hydroxyimino, hydroxy or carboxy; or

R₁ is

- a phenylalkyl wherein alkyl is a straight- or branched (C₆₋₂₀)carbon chain; or
- a phenylalkyl wherein alkyl is a straight- or branched (C₁₋₃₀)carbon chain wherein said phenylalkyl is substituted by
 - a straight- or branched (C₆₋₂₀)carbon chain optionally substituted by halogen,
 - a straight- or branched (C₆₋₂₀)alkoxy chain optionally substituted by halogen,
 - a straight- or branched (C₆₋₂₀)alkenyloxy,
 - phenylalkoxy, halophenylalkoxy, phenylalkoxyalkyl, phenoxyalkoxy or phenoxyalkyl,
 - cycloalkylalkyl substituted by C₆₋₂₀alkyl,
 - heteroarylalkyl substituted by C₆₋₂₀alkyl,
 - heterocyclic C₆₋₂₀alkyl or
 - heterocyclic alkyl substituted by C₂₋₂₀alkyl,

and wherein

the alkyl moiety may have

- in the carbon chain, a bond or a heteroatom selected from a double bond, a triple bond, O, S, sulfinyl, sulfonyl, or NR₆, wherein R₆ is as defined above, and
- as a substituent alkoxy, alkenyloxy, alkynyloxy, aralkyloxy, acyl, alkylamino, alkylthio, acylamino, alkoxycarbonyl, alkoxycarbonylamino, acyloxy, alkylcarbamoyl, nitro, halogen, amino, hydroxy or carboxy, and

each of R₂, R₃, R₄ and R₅, independently, is H, C₁₋₄ alkyl or acyl;

- 17 -

a compound of formula II

wherein m is 1 to 9 and each of R'₂, R'₃, R'₄ and R'₅, independently, is H, alkyl or acyl,

a compound of formula III

wherein W is H; C₁₋₆alkyl, C₂₋₆alkenyl or C₂₋₆alkynyl; unsubstituted or by OH substituted phenyl; R''₄O(CH₂)_n; or C₁₋₆alkyl substituted by 1 to 3 substituents selected from the group consisting of halogen, C₃₋₈cycloalkyl, phenyl and phenyl substituted by OH;

X is H or unsubstituted or substituted straight chain alkyl having a number p of carbon atoms or unsubstituted or substituted straight chain alkoxy having a number (p-1) of carbon atoms, e.g. substituted by 1 to 3 substituents selected from the group consisting of C₁₋₆ alkyl, OH, C₁₋₆alkoxy, acyloxy, amino, C₁₋₆alkylamino, acylamino, oxo, haloC₁₋₆alkyl, halogen, unsubstituted phenyl and phenyl substituted by 1 to 3 substituents selected from the group consisting of C₁₋₆alkyl, OH, C₁₋₆alkoxy, acyl, acyloxy, amino, C₁₋₆alkylamino, acylamino, haloC₁₋₆alkyl and halogen; Y is H, C₁₋₆alkyl, OH, C₁₋₆alkoxy, acyl, acyloxy, amino, C₁₋₆alkylamino, acylamino, haloC₁₋₆alkyl or halogen, Z₂ is a single bond or a straight chain alkylene having a number of carbon atoms of q,

each of p and q, independently, is an integer of 1 to 20, with the proviso of 6 ≤ p+q ≤ 23, m' is 1, 2 or 3, n is 2 or 3,

each of R''₁, R''₂, R''₃ and R''₄, independently, is H, C₁₋₄alkyl or acyl;

a compound of formula IVa or IVb

- 18 -

wherein X_a is O, S, NR_{1s} or a group $-(CH_2)_{n_a}-$, which group is unsubstituted or substituted by 1 to 4 halogen; n_a is 1 or 2, R_{1s} is H or (C_{1-4}) alkyl, which alkyl is unsubstituted or substituted by halogen; R_{1a} is H, OH, (C_{1-4}) alkyl or $O(C_{1-4})$ alkyl wherein alkyl is unsubstituted or substituted by 1 to 3 halogen; R_{1b} is H, OH or (C_{1-4}) alkyl, wherein alkyl is unsubstituted or substituted by halogen; each R_{2a} is independently selected from H or (C_{1-4}) alkyl, which alkyl is unsubstituted or substituted by halogen; R_{3a} is H, OH, halogen or $O(C_{1-4})$ alkyl wherein alkyl is unsubstituted or substituted by halogen; and R_{3b} is H, OH, halogen, (C_{1-4}) alkyl wherein alkyl is unsubstituted or substituted by hydroxy, or $O(C_{1-4})$ alkyl wherein alkyl is unsubstituted or substituted by halogen; Y_a is $-CH_2-$, $-C(O)-$, $-CH(OH)-$, $-C(=NOH)-$, O or S, and R_{4a} is (C_{4-14}) alkyl or (C_{4-14}) alkenyl; and

a compound of formula V

wherein

m_c is 1, 2 or 3;

X_c is O or a direct bond;

R_{1c} is H; C_{1-6} alkyl optionally substituted by OH, acyl, halogen, C_{3-10} cycloalkyl, phenyl or hydroxy-phenylene; C_{2-6} alkenyl; C_{2-6} alkynyl; or phenyl optionally substituted by OH;

R_{2c} is

- 19 -

wherein R_{5c} is H or C_{1-4} alkyl optionally substituted by 1, 2 or 3 halogen atoms, and R_{6c} is H or C_{1-4} alkyl optionally substituted by halogen;
 each of R_{3c} and R_{4c} , independently, is H, C_{1-4} alkyl optionally substituted by halogen, or acyl, and
 R_c is C_{13-20} alkyl which may optionally have in the chain an oxygen atom and which may optionally be substituted by nitro, halogen, amino, hydroxy or carboxy; or a residue of formula (a)

wherein R_{7c} is H, C_{1-4} alkyl or C_{1-4} alkoxy, and R_{8c} is substituted C_{1-20} alkanoyl, phenyl C_{1-14} alkyl wherein the C_{1-14} alkyl is optionally substituted by halogen or OH, cycloalkyl C_{1-14} alkoxy or phenyl C_{1-14} alkoxy wherein the cycloalkyl or phenyl ring is optionally substituted by halogen, C_{1-4} alkyl and/or C_{1-4} alkoxy, phenyl C_{1-14} alkoxy- C_{1-14} alkyl, phenoxy C_{1-14} alkoxy or phenoxy C_{1-14} alkyl,
 R_c being also a residue of formula (a) wherein R_{8c} is C_{1-14} alkoxy when R_{1c} is C_{1-4} alkyl, C_{2-6} alkenyl or C_{2-6} alkynyl,
 or a compound of formula VI

wherein

n_x is 2, 3 or 4

R_{1x} is H; C_{1-6} alkyl optionally substituted by OH, acyl, halogen, cycloalkyl, phenyl or hydroxy-phenylene; C_{2-6} alkenyl; C_{2-6} alkynyl; or phenyl optionally substituted by OH;

R_{2x} is H, C_{1-4} alkyl or acyl

each of R_{3x} and R_{4x} , independently is H, C_{1-4} alkyl optionally substituted by halogen or acyl,

R_{5x} is H, C_{1-4} alkyl or C_{1-4} alkoxy, and

- 20 -

R_{6x} is C_{1-20} alkanoyl substituted by cycloalkyl; cyloalkyl C_{1-14} alkoxy wherein the cycloalkyl ring is optionally substituted by halogen, C_{1-4} alkyl and/or C_{1-4} alkoxy; phenyl C_{1-14} alkoxy wherein the phenyl ring is optionally substituted by halogen, C_{1-4} alkyl and/or C_{1-4} alkoxy, R_{6x} being also C_{4-14} alkoxy when R_{1x} is C_{2-4} alkyl substituted by OH, or pentyloxy or hexyloxy when R_{1x} is C_{1-4} akyl, provided that R_{6x} is other than phenyl-butylenoxy when either R_{5x} is H or R_{1x} is methyl, or a pharmaceutically acceptable salt thereof.
