UNITED STATES PATENT OFFICE.

CHARLES BOECKH, OF STRASBURG, FRANCE.

IMPROVED CLEANER FOR LAMP-CHIMNEYS.

Specification forming part of Letters Patent No. **36,600**, dated October 7, 1862.

To all whom it may concern:

Be it known that I, CHARLES BOECKH, of Strasburg, in the Department of Bas-Rhin, in the Empire of France, and now sojourning in the city of Buffalo, in the State of New York, mechanic, have invented a Lamp-Chimney Cleaner; and I do hereby declare that the following is a full and exact description thereof.

The drawings Nos. 1 and 2 show a brush, the handle, of wood or other material, being cut or bent into such shape as to fit on one side of the inner portion of a lamp-chimney, the handle being covered on one side or both sides, as shown in drawings, with wool, cotton, sponge, or any other material suitable for the purpose, the covering or rubber being fastened with wire, thread, cement, tacks, or by pressure only, as shown in the drawings Nos. 1 and 2.

The peculiar shape of the brush and the facility to make it of any soft material not only facilitates the process of polishing every part of the chimney, but also prevents the frequent breaking of lamp-chimneys.

What I claim as my invention is—

A brush or rubber for cleaning lamp-chimneys, the shaft of which being adapted only to one side of the inner portion of the chimney, and being covered with some rubbing or brushing material, the brush not being round shape, like the common chimney-cleaners in use at the present time.

CHAS. BOECKH.

In presence of—
GEORG M. RUPP,
VALENTIN YOUNG.
