BY A. M. Pierce,

ATTORNEY.

UNITED STATES PATENT OFFICE.

OSCAR ANCHELL, OF BROOKLYN, NEW YORK.

SAMPLE-LEAF.

No. 836,358. Specification of Letters Patent. Patented Nov. 20, 1906.

Application filed June 21, 1906. Serial No. 322,693.

To all whom it may concern:

Be it known that I, OSCAR ANCHELL, a citizen of the United States, residing at Brooklyn, in the county of Kings and State of New York, have invented certain new and useful Improvements in Sample-Leaves, of which the following is a specification, reference being had therein to the accompanying drawings.

My invention relates especially to means or devices employed for exhibiting samples of lace, fabric, or the equivalent, and has for its object the provision of a very cheap and simple article of manufacture designed for this purpose.

To attain the desired end, my invention consists, essentially, in a body or leaf having at each edge a lip upon each side or face formed of paper turned back upon itself and stitched to the body of the leaf and at the center of the leaf on each side double projecting lips formed of paper turned back upon itself at each edge and centrally stitched to the leaf-body, one of the portions of paper of which the side lips are formed being carried outward and around a binding-piece, all of which will be hereinafter first fully described and then pointed out in the claim.

In the drawings, Figure 1 is a plan view of a sample-leaf embodying my invention, and Fig. 2 is a cross-sectional view at line *a a* of Fig. 1.

Like numerals of reference, wherever they occur, indicate corresponding parts in both figures.

1 is the leaf-body, made of stout paper or thin board.

2 represents strips of paper, each edge being turned back upon itself at 3 and the strip stitched to the leaf-body at 4.

5 is a binding-strip embraced by the strip 2 at one edge of the leaf-body.

6 represents strips of paper each edge turned back upon itself at 7 and centrally stitched to the leaf-body at 8.

9 represents removable cards retained in any desired position between the lips 3 and 7, said cards being designed to hold a sample of lace or fabric upon its face, as illustrated at 10 and 11.

12 represents strengthening-strips or binding stitched to the top and bottom of the leaf-body 1.

Having now fully described my invention, what I claim as new therein, and desire to secure by Letters Patent, is—

As a new article of manufacture, a sample-leaf in which is comprised a body or leaf having at each edge a lip upon each side or face, formed of paper, turned back upon itself and stitched to the body of the leaf; at the center of the leaf, on each face, a double projecting lip formed of paper, turned back upon itself at each edge, and centrally stitched to the leaf-body, one of the portions of paper of which the side lips are formed being carried outward and around a binding-piece, substantially as shown and described.

In testimony whereof I hereto affix my signature in presence of two witnesses.

OSCAR ANCHELL.
