An openable closure assembly including: a) a base having two end edges, a front longitudinal side and a back longitudinal side, a top surface and a bottom surface; b) an opening mechanism mounted on the top surface of the base adjacent to and spaced from both of the longitudinal side edges; c) at least one gripping aid joined to an end edge of the opening mechanism. Also disclosed are packages comprising the closure assembly. Additionally disclosed are securement loops which can be attached to the package bottom panel and into which the gripping aids can be inserted.
OPENABLE ASSEMBLY WITH GRIPPING AIDS AND FOLDING MEANS

TECHNICAL FIELD

0001 The present invention relates to an openable assembly which can be mounted on a package or other structure. The openable assembly preferably includes at least one gripping aid to facilitate opening and/or closing of the device. In certain embodiments, the gripping aid can also be used to secure the package in a folded or other desirable configuration.

BACKGROUND OF THE INVENTION

0002 Openable packages of various types are well known in the packaging art. In many cases, it is desirable for the package to include an opening mechanism such that the package itself need not be torn or destroyed during opening. Further, it may be desirable to have a reclosable opening mechanism to provide the user with the ability to open and close the package several times. Such reclosable opening mechanisms include zippers, hook and loop closures and ZIP-LOCK™ type slide closures. Typical slide-zippers are disclosed in U.S. Pat. Nos. 5,007,143; 5,089,971; 5,131,121 and 5,664,299. Openable, but generally not reclosable perforations are also well known in the art, one example of which is described in U.S. Pat. No. 4,877,139.

0003 Because the act of sliding a zipper or opening a perforation or hook and loop closure is a relatively simple manual movement, a large open area can be quickly and easily closed using these devices. However, persons, such as the handicapped, the elderly and young children whose manual strength and dexterity are not fully developed can benefit from additional aids in handling gripping the object to be opened and/or closed.

0004 Accordingly, it would be desirable to provide a closure system which is easy to grasp. It would also be desirable to provide a closure assembly having a gripping aid that helps the user manage the device during opening and/or closing. Further, it would be desirable to provide a package with a closure assembly having a gripping aid that helps users such as small children, the elderly or physically challenged users to grip and manage the closure assembly during use.

SUMMARY OF THE INVENTION

0005 An openable closure assembly comprising a base having, two end edges, a first longitudinal side and a second longitudinal side; a closure mechanism comprising a first portion and a second portion, the closure mounted on said base adjacent to and spaced apart from said longitudinal sides; and at least one gripping aid joined to at least one of the end edges of said opening mechanism.

0006 In one embodiment, the present invention provides an openable assembly where the closure mechanism is a zipper and gripping aids are disposed at each end of the closure assembly. Such an embodiment could provide a reusable package in the form of a two-sided pouch, a four-sided package, etc. especially useful for containing sheet-like articles.

0007 In other embodiments, the present invention may provide a disposable package comprising a closure assembly including a perforation and/or may contain any number of different articles.

BRIEF DESCRIPTION OF THE DRAWINGS

0008 FIG. 1 is a front perspective view of a package including an embodiment of the openable closure assembly in closed position.

0009 FIG. 2 is a side view of the package of FIG. 1.

0010 FIG. 3 is a top plan view of the package of FIG. 1.

0011 FIG. 4 is an elevational view of the package of FIG. 1.

0012 FIG. 5 is a front perspective view of the package of FIG. 1 in an open configuration.

0013 FIG. 6 is a side view of the package of FIG. 5.

0014 FIG. 7 is a perspective view of the package of FIG. 1 empty and folded flat.

0015 FIG. 8 is a right side view of the package of FIG. 7.

DETAILED DESCRIPTION OF THE INVENTION

0016 The present invention is directed to an openable closure assembly with gripping aids to facilitate the opening and/or closing of the assembly. The closure assembly of the present invention may be used alone or in conjunction with any type of package of other structure. In one embodiment, as shown in FIG. 1, the closure assembly 5 may be associated with a package 10. The package 10 may be of any type, size, and shape and may be made from any suitable materials such as films polyester, polyethylene and polypropylene films and/or coated and uncoated fabrics. The package 10 may be durable (i.e. reusable) or may be disposable (i.e. intended to be discarded after use). Further, the package 10 may include any type of contents or may be empty. In a preferred embodiment, the package 10 may be suitable for storing a multiplicity of sheets of material such as wiping sheets or disposable wash cloths. An example of such a package including a multiplicity of sheets of material 70 is shown in FIG. 5.

0017 The openable closure assembly 5 of the present invention preferably includes a closure mechanism having a first portion 52 and a second portion 54. The first portion 52 and the second portion 54 interact with each other to provide the closure assembly with a closed configuration, as is shown in FIGS. 1 and 2. The interaction between the first portion 52 and the second portion 54 can be mechanical, chemical, magnetic, static, adhesive, frictional or any other type of interaction which provides the desired closure properties for the particular package. In one embodiment, the first and second portions of the closure assembly 5 may include the teeth of a zipper. In other exemplary embodiments, the first portion may include a loop and the second portion can include a hook which is engageable with the loop. In yet other embodiments, the first and second portions can include adhesives fasteners, ZIP-LOCK™ type closures elements, or any combination of known closure elements, such as those referred to herein and others known in the art. In yet other embodiments, the first portion 52 and the second portion 54 may comprise the same material or materials separated only by a perforation or a line of weakness. In any case, when the first and second portions of the closure
assembly 5 are not interacting with each other, the closure assembly is considered in an open configuration, as is shown in FIGS. 5 and 6.

[0018] The first portion 52 of the closure assembly 5 and/or the second portion 54 may be joined directly to the package or structure for which the openable closure assembly 5 is being provided, or may be joined to a base structure which is in turn joined to the package or structure. The base 50 provides a transition region between the first and second portions of the closure assembly and the package or structure to which the closure assembly 5 is attached. The transition region may make it easier to join the closure assembly to the article in situations where the first and/or second portions are generally incompatible with the rest of the package or structure to which the closure assembly 5 is joined. For example, the teeth of a zipper are often joined to a strip of material, or base, which is joined to the article implementing the closure device. The base 50 may be made from any suitable material and may be of any suitable size. The base 50 also may provide the article with other structural or aesthetic advantages, such as strength, color, breathability, etc. In any case, the base 50 provides a convenient structure onto which the first portion 52, the second portion 54 or any other part of the closure assembly 5 may be mounted.

[0019] The closure assembly 5 of the present invention preferably also includes at least one gripping aid 60. The gripping aid 60 provides the user of the article with a convenient and easy to grip structure which can aid in the opening and/or closing of the closure assembly 5. The gripping aid 60 can be any structure that helps the user with the functioning of the closure assembly 5. For example, as shown in FIG. 1, the gripping aid 60 can be a generally spherical member joined to one end of the closure assembly 5. In other embodiments, the gripping aid can be other shapes or sizes. In any of the embodiments, the gripping aid 60 can include adhesive, frictional, suction or other forces to aid the user grip the closure device. In one such embodiment, the gripping aid 60 may include a tab coated with a pressure sensitive adhesive which is skin friendly, yet which provides the user with an aid to grip a portion of the closure assembly 5.

[0020] The gripping aid 60 should be of sufficient size, shape or other properties (e.g. adhesiveness) to make the closure assembly easier to grasp and hold than without the gripping aid 60. In one preferred embodiment, the gripping aid 60 may be in the general shape of a sphere, a semi-sphere, or a cube. Although the size of the gripping aid 60 is not critical, it has been found that a shape having a diameter or width of at least about ½ inch (about 1.25 cm) is generally preferred. Much larger diameters and widths ranging anywhere from about ½ inch (1.25 cm) to about 10 inches (about 25.4 cm) have also been found to be sufficient and/or desirable in certain embodiments. Further, smaller diameters and widths ranging from about ¼ inch (about 0.635 cm) to about ½ inch (about 1.25 cm) have also been found to be sufficient in certain embodiments.

[0021] As shown in FIGS. 1-8, one preferred embodiment of the present invention includes a closure assembly 5 including at least one gripping aid 60 disposed adjacent at least one of the ends of the closure assembly 5. However, as shown in FIGS. 4 and 7, it may be desirable to provide the closure assembly with at least two gripping aids 60, one adjacent each end of the closure assembly 5. The gripping aids 60 disposed adjacent one or more of the ends of the closure assembly 5 provide the user with a convenient way to grasp that portion of the closure assembly 5 while opening or closing the assembly. This is especially useful for sliding type closure assemblies, such as zippers and ZIP-LOCK® type fasteners wherein the user must grasp one end of the closure mechanism and slide another part toward or away from that end. The gripping aid 60 helps the user immobilize one end of the closure assembly 5 so that the opening or closing motion is smooth. This function is especially helpful for packages and other devices which are intended to be opened or closed by children, the elderly or physically challenged users who may not have the dexterity or physical capabilities to manage typical sliding closure systems.

[0022] In one embodiment, the present invention may take the form of a package 10 especially useful for children, the elderly or physically challenged users containing a cleaning wipe or other sheet-like article. As shown in FIG. 5, the sheets 70 may be stacked inside the package 10 on top of each other, although any other configuration can be used. The package 10 may include a first panel 30 and a second panel 31 which are joined and provide an opening 53. The base 50 of the closure assembly 5 is joined to the package about the opening 53. The first portion 52 and the second portion 54 of the closure mechanism are joined to the base 50. In this embodiment, the closure assembly 5 includes two gripping aids 60, one on each end of the closure assembly 5. The gripping aids 60 are shown to be in the shape of enlarged generally spherical elements. As shown in FIG. 7, the closure assembly 5 extends beyond the opening in the package 10. The gripping aids 60 are shown located outwardly from the opening 53 at each end of the closure assembly 5. This configuration is especially helpful for zipper and ZIP-LOCK® type closure because it allows the user to completely open or close the package 10 without the zipper or other sliding mechanism getting in the way of the opening.

[0023] In certain embodiments of the present invention, the gripping aid 60 may also provide an additional benefit to the user other than facilitating opening or closing of the closure assembly 5. For example, the gripping aid may be used to hold a portion of the package in a particular configuration. In one embodiment, as shown in FIGS. 1 and 4, the gripping aids 60 may be used to keep a portion of the package 10 in a folded configuration. This is especially useful for irregularly shaped packages because it can make shipping and handling easier without the need for extra packaging. However, in other configurations, the gripping aids can be used to hold the package 10 open, attatch packages to each other or other structures and the like.

[0024] The additional benefits described above with respect to the gripping aid 60, can be provided by any known structure which interacts with the gripping aid 60. In one embodiment, the package 10 may include loops, herein referred to as securement loops 66, joined on the package 10 into which the gripping aids 60 can be inserted. Although elastic loops are preferred in certain embodiments, other materials or types of structures other than loops are contemplated.

[0025] While particular embodiments and/or individual features of the present invention have been illustrated
described, it would be obvious to those skilled in the art that
various other changes and modifications can be made with-
out departing from the spirit and scope of the invention.
Further, it should be apparent that all combinations of such
embodiments and features are possible and can result in
preferred executions of the invention. Therefore, the
appended claims are intended to cover all such changes and
modifications that are within the scope of this invention.
What is claimed is:
1. An openable closure assembly comprising:
   a) a base having, two end edges, a first longitudinal side
      and a second longitudinal side;
   b) a closure mechanism comprising a first portion and a
      second portion, mounted on said base adjacent to and
      spaced apart from said longitudinal sides;
   c) at least one gripping aid joined to at least one of the end
      edges of said opening mechanism.
2. The openable assembly of claim 1 wherein the opening
   mechanism is selected from the group consisting of zippers,
   hook and loop closures, adhesive fasteners and perforations.
3. The openable assembly of claim 1 wherein the gripping
   aids are in the shape of spheres.
4. The openable assembly of claim 1 wherein the gripping
   aids are in the shape of cubes.
5. The openable assembly of claim 1 wherein the gripping
   aids include adhesives and/or hooking loop fastening ele-
   ments.
6. A package with an opening comprising:
   a) a first panel having a first longitudinal edge and a
      second panel having a second longitudinal edge;
   b) an openable closure assembly having a first end edge
      and a second end edge and comprising a closure
      mechanism including a first portion and a second
      portion;
   c) at least one gripping aid joined to at least one of said
      end edges of said closure assembly.
7. The package according to claim 6 wherein the closure
   assembly additionally comprises a base joined between the
   first portion and the first panel and the second portion and
   the second panel.
8. The package of claim 6 wherein the first and second
   portions extend beyond the first and second panels such that
   at least one of the end edges of the closure assembly is
   located outwardly from the opening.
9. The package of claim 8 wherein the gripping aid is
   disposed adjacent the end edge outward from the opening.
10. The package of claim 6 wherein the opening mecha-
    nism is selected from the group consisting of zippers, hook
    and loop closures, adhesive fasteners and perforations.
11. The package of claim 6 wherein the gripping aids are
    generally in the shape of spheres.
12. The package of claim 6 wherein the gripping aids are
    generally in the shape of cubes.
13. The package of claim 6 wherein the gripping aids
    include adhesives and/or hooking loop fastening elements.
14. A package comprising:
    a) a first panel having a first longitudinal edge and a
       second panel having a second longitudinal edge;
    b) a bottom panel;
    c) a closure assembly comprising:
       i) a base having, two end edges, a first longitudinal side
          and a second longitudinal side, said base being
          joined to and extending beyond said first and second
          panels;
       ii) a closure mechanism comprising a first portion and a
          second portion, mounted on said base adjacent to
          and spaced apart from said longitudinal sides;
       iii) at least one gripping aid joined to at least one of the end
           edges of said closure assembly.
    d) at least one securement loop joined to the package
       which is capable of interacting with the gripping aid.
15. The package of claim 14 wherein said package is reusab-
    le.
16. The package of claim 14 wherein said package is dispo-
    sable.
17. The package of claim 14 wherein the opening mecha-
    nism is selected from the group consisting of zippers, hook
    and loop closures, adhesive fasteners and perforations.
18. The package of claim 14 wherein the gripping aids are
    generally in the shape of spheres.
19. The package of claim 14 wherein the gripping aids are
    generally in the shape of cubes.
20. The package of claim 14 wherein the gripping aids
    include adhesives and/or hooking loop fastening elements.
21. The package of claim 14 wherein the gripping aid
    interacts with the securement loop so as to hold at least a
    portion of the package in a folded configuration.
22. The package of claim 14 wherein the folded configu-
    ration of the package is substantially parallelepipedal.
23. The package of claim 14, wherein the package con-
    tains a stack of sheets of material.
