UNITED STATES PATENT OFFICE.

JAMES WRIGHT AND THOMAS THOMPSON, OF ELIZABETH, NEW JERSEY.

IMPROVEMENT IN INSIDE BLINDS FOR HOUSES.

Specification forming part of Letters Patent No. 127,006, dated May 21, 1872.

Specification describing an Improvement relating to the Inside Folding Blinds for Dwellings, invented by JAMES WRIGHT and THOMAS THOMPSON, of Elizabeth, in the county of Union and State of New Jersey.

The invention consists in entirely covering the hinged blind by means of a jamb that folds over it, as hereinafter fully described and subsequently pointed out in the claim.

The drawing is a horizontal section, with one half of the blind let out and the other folded in the jamb.

A represents a jamb, hinged at one or more points so as to fold over a pocket or chamber, A', into which all the slats B of a blind, after being folded upon one another in the usual manner, are turned.

By this construction the blinds are not only folded upon one another and then turned into a pocket, as now usually done, but, being covered and protected by the jamb, are not sub-

ject to defacement by the deposit of dust and other causes. The size of the room is also not appreciably affected by this construction, or its proportion marred by any jutting projection, since the jamb need only extend one inch beyond the plane surface of the walls. The ordinary pockets extend some six or eight inches further out than is necessary with our improvement.

Having thus described our invention, what we claim as new, and desire to secure by Letters Patent, is—

The folding jambs A A and pockets A' A', constructed and arranged, with respect to the folding blinds B B, as and for the purpose described.

JAMES WRIGHT.

THOMAS THOMPSON.
