(54) **Dishwasher with washing tank divided into two sectors**

(57) A dishwasher is provided with means to divide the washing tank (1) into two sectors that can be used separately, said means including a dividing baffle (2) that physically performs the division of the tank into two independent sectors and is made of a transparent material.

In this way the baffle (2) does not affect the luminosity of the tank (1) since the light coming from any direction can be fully exploited, and even in the case of artificial illumination of the tank (1) it is sufficient to provide a single lamp (3) to be able to illuminate both sectors.
