**Title:** SHARING USER INFORMATION THROUGH SECONDARY DISPLAYS

**Abstract:** Information sharing is disclosed between a rich user device and one or more secondary display devices. A user selects types of information at the rich user device to be shared with the secondary display devices. On selection, the rich user device sends the selected information sets to the secondary display devices for display. When updates of the information are detected at the rich user device, those updates are sent along the secondary display devices to display the new, updated information.
