UNITED STATES PATENT OFFICE.

SAMUEL SONESHEIN, OF NEW YORK, N. Y.

TOOTHBRUSH.

Application filed December 29, 1924. Serial No. 758,522.

To all whom it may concern:

Be it known that I, SAMUEL SONESHEIN, a citizen of the United States, residing at New York city, in the county of New York and State of New York, have invented certain new and useful Improvements in Toothbrushes, of which the following is a specification.

This invention relates to improvements in toothbrushes and more particularly to combination toothbrushes in which the toothbrush handle carries an additional toilet appliance.

Further objects of this invention will be apparent from the specification and drawings in which—

Fig. 1 is a perspective view partly in section of my improved combination toothbrush.

Fig. 2 is a top plan view.

Fig. 3 is a vertical sectional view showing the construction of the parts.

Fig. 4 is a perspective view of the brush dissociated from the handle.

Fig. 5 is a side view of the tip of the handle of the brush together with the appliance which it carries.

Fig. 6 is a perspective view of the handle portion alone.

Fig. 7 is a top plan view of the tip of the handle and appliance of which a side view is shown in Fig. 5.

Fig. 8 is a sectional view along the line 8—8 of Fig. 2.

Fig. 9 is a sectional view along the line 9—9 of Fig. 2.

The principal object of this invention is to provide a combination toothbrush in which the brush portion of the toothbrush is separable from the handle and in which also the handle is hollowed so as to carry an additional toilet appliance and in this particular embodiment, a nail file is shown.

A brush 1 has the handle 2, the brush bearing a threaded extension 3 fitting into the threaded portion 4 of the handle 2. An ornamental collar 5 connects the handle and the brush so as to cover the line of demarcation between the two. The tip 6 of the handle 2 is made separable and inserted therein is a nail file 7, which is carried in the hollow of the handle 2. A collar 8 having a prong-like portion 9 is fitted over the end of the handle 2 and the prong 9 engages into a recess 10 in the tip 6 of the handle, which carries the nail file. Hence the end of the handle and the handle itself cannot be readily disengaged from each other, although the nail file may be removed from the handle whenever wanted and the tip 6 of the handle 2 serves as an efficient holder for the nail file.

By means of this construction a toilet article is secured having separable parts so that they can be packed in a small container. This article provides a portable toothbrush and a portable nail file or other toilet appliance.

Having fully described my invention, what I claim is:

I claim:

In combination, a brush having a threaded extension, a handle for said brush having a recess in the rear end thereof, the front portion of said handle being internally threaded and being separated from said recess by an intermediate portion of said handle, the rear of said handle having a separable tip detachably connected thereto, and detachable therefrom by a longitudinal movement, said tip having a flat toilet appliance connected thereto and adapted to fit into said recess.

In testimony whereof I hereunto affix my signature.

SAMUEL SONESHEIN.
