UNITED STATES PATENT OFFICE

RUDOLPH DE BOER, OF GRAND RAPIDS, MICHIGAN, ASSIGNOR TO GRAND RAPIDS METALCRAFT CORPORATION, OF GRAND RAPIDS, MICHIGAN, A CORPORATION OF MICHIGAN

WALL POCKET

Application filed May 13, 1927. Serial No. 191,103.

The present invention relates to wall pockets, particularly such as are mounted on the side walls or doors of automobiles for containing matches, cigarettes and the like; and its principal object is to provide such a device having a container portion which may be readily removed for emptying, etc.

This and any other and more specific objects hereinafter appearing are attained by, and the invention finds preferable embodiment in, the structure hereinafter particularly described in the body of this specification and illustrated by the accompanying drawings, in which:

Figure 1 is a face view of a wall pocket device;

Figure 2 is a vertical sectional view thereof taken on line 2—2 of Figure 1;

Figure 3 is a view in perspective of the base plate of the device; and

Figure 4 is a view in perspective of the outer plate of the device, and of a portion of the container carried thereby.

In the embodiment of the invention illustrated by the drawings, a wall pocket device is shown comprising a base plate 1 adapted to be mounted, as by screws 2 extending therethrough, on a wall 3. This plate has outwardly and upwardly bent portions forming upper and lower hooks or tongues 4 and 5, spaced outwardly from the face of said plate.

A second plate 6 is slit horizontally at 7, 7 and 8, 8 and the portions 9, 10, 10 between the slits 7, 7 and the slits 8, 8 are bent inwardly to form sockets 11, and 12, 12 in which the hooks 4 and the hooks 5, 5 are received in the assembled positions of the plates, as shown in Figure 2. The upper edge portion 13 of plate 6 is bent inwardly to cover the upper edge of the upper hook 4 in such assembled position.

The face of the upper hook 4 may have ornamental markings 15 which are visible through the opening 16 in plate 6 formed by bending its portion 9 inwardly. The outer plate 6 carries on its outer face and below the upper hook 4 a suitable container of any desired form, as that shown at 17.

It will be seen that the plate 6 with its

container portion 17 may be readily removed from the hooks 4 and 5, 5 and as readily replaced.

The invention being intended to be pointed out in the claim, is not to be limited to or by details of construction of the particular embodiment thereof illustrated by the drawings or hereinbefore described.

I claim:

In a wall pocket; a base plate adapted for mounting on a wall and having upper and lower upwardly extending hooks spaced outwardly from the face of said plate, one of said hooks being springable outwardly; a plate carrying on its outer side a container below the upper hook in the assembled position of the plates and having horizontal slits and inwardly bent portions therebetween forming sockets in which the hooks are received in said assembled position, the upper edge of the second-mentioned plate extending toward and contacting the wall and covering the upper hook in said assembled position and the upper hook being visible in front of the inwardly bent portion of second-mentioned plate with which portion the upper hook engages in said assembled position.

In testimony whereof I have hereunto set my hand at Grand Rapids, Michigan, this 7th day of April, 1927.

RUDOLPH DE BOER.
