Inventor
Thomas Morgan

By his Attorney
Albert Ruff
To all whom it may concern:  

Be it known that I, THOMAS MORGAN, of Philadelphia, in the county of Philadelphia and State of Pennsylvania, have invented certain new and useful Improvements in Designs for Horse-Boots; and I do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same.

My invention relates to a new and original design in horse-boots.  

In the accompanying drawings, Figure 1 is a front view of my design, and Fig. 2 is a sectional view thereof.  

My design consists in a pad having a concavo-convex shape.  

In the drawings, A represents the lower portion of the pad having the concavo-convex shape, and D the upper portion. The lower portion thereof is gradually curved outwardly and upwardly, terminating in the conically-shaped end C.  

The piece D represents the upper portion of the pad C, and is rounded, as shown at E, extending to the sections F, at which point it is curved inwardly and outwardly, forming the crescents G, as shown, terminating in the even upper portion, H.  

Having fully described my invention, what I claim, and desire to secure by Letters Patent, is—

The design for a horse-boot herein shown and described, the same consisting of a pad having a concavo-convex shape, the lower portion thereof being gradually curved outwardly and upwardly, terminating in a conical end, the upper portion being rounded, as shown at C, then having the inner curve, forming crescents G, terminating in the even upper portion, H, as shown and described.  

In testimony whereof I have signed this specification in the presence of two subscribing witnesses.  

THOMAS MORGAN.
