Toy golfer.

A toy golfer comprises a golfer figure (10) whose upper part or torso (11) is rotatably secured to a lower or leg part (12) having a supporting plate (13) firmly positionable on a base (playing field). An electromechanical motor or transducer (20) controls the rotary movements of the golfer figure, the movable part (11) being connectible with an imitation of a golf club (14) or the like which, under the action of energy adjustable by the player, can be moved in a substantially arcuate path (Fig. 2). The golf club swung by said movable part by means of said motor is, on the one hand, swingable rearwardly in order to swing forwardly under the action of its own weight to strike the ball and, on the other hand, is swingable forwardly to putt the ball.
