UNITED STATES PATENT OFFICE.

CHARLOTTE CHRISTINA WEBBER, OF SEA CLIFF, NEW YORK.

BIB.

SPECIFICATION forming part of Letters Patent No. 439,736, dated November 4, 1890.

Application filed July 19, 1890. Serial No. 359,334. (No model.)

To all whom it may concern:

Be it known that I, CHARLOTTE CHRISTINA WEBBER, of Sea Cliff, Queens county, New York, have invented a new and Improved Child's Bib, of which the following is a specification.

This invention relates to a child's bib of peculiar construction and adapted to more thoroughly protect the clothing from being soiled.

The invention consists in the various features of improvement more fully pointed out in the claim.

The accompanying drawing represents a rear view of my improved child's bib, with the shield partly folded back.

The letter a represents the body of a child's bib divided on top, as at a', and provided with the circular neck-opening a^2. To the back of the bib there is secured a downwardly-extending shield b by a seam running along the lower edge b' of the neck-opening a^2. This shield covers the lower part of the bib, but does not extend to the top of the same. Thus the flaps a^3 at the right and left of slit a' and situated above the upper edge of the shield are not covered by the same. These flaps can therefore be folded around the neck of the infant in the proper manner and are fastened together at the back. The shield b does not follow the flaps a^3 around the neck, but is tucked under the clothing, so as to rest upon the chest. In this way the bib is securely held in place and properly protects the infant's dress.

What I claim is—

A child's bib composed of a body a, having flaps a^3, that form upper part of the neck-opening, and of a shield b, secured to the body a at the neck-opening and below flaps a^3, the lower part of the shield being free from the body a, substantially as specified.

CHARLOTTE CHRISTINA WEBBER.
