(54) Title: INTERACTIVE MESSAGING SYSTEM

(57) Abstract: The interactive messaging system of the present invention provides for an interactive communication process between users, both senders and recipients. The sender composes a message by filing in a template stored in data services. Once completed, the sender pushes the message to a recipient's wireless device if the wireless device contains a WAP browser which is capable of receiving pushed messages. Typically the message includes a question along with answers for the recipient to choose from. Each answer corresponds with a pre-assigned response key and the recipient answers the question by selecting one of the pre-assigned response keys. The recipient's response is available to the sender in the form of an e-mail, WAP Push, on-line access or interactive message that is shown to the sender on an on-line status screen.
