(54) Title: SYSTEM AND METHOD FOR BI-DIRECTIONAL COMMUNICATION AND EXECUTION OF DYNAMIC INSTRUCTION SETS

(57) Abstract: A system and method for bi-directional communication of dynamic instruction sets between a handset and a wireless communication network is provided. A dynamic instruction set represents a discrete function or a discrete action that is to be carried out by the recipient device. A wireless communication device can send a dynamic instruction set to the network in order to instruct the network to perform certain operations such as providing information, software, or other data to the wireless communication device. The wireless communication device is also configured to receive and execute dynamic instruction sets sent from the network.

° Special categories of cited documents :

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- * & * document member of the same patent family
