ATTORNEY

UNITED STATES PATENT OFFICE.

RUDOLPH M. FIALA, OF HOWELL, NEBRASKA.

CONCRETE-MONUMENT FORM.

Application filed January 12, 1922. Serial No. 528,796.

To all whom it may concern:

Be it known that I, RUDOLPH M. FIALA, a citizen of the United States, residing in the city of Howell, State of Nebraska, have invented new and useful Improvements in Concrete-Monument Forms, of which the following is a specification, reference being had to the accompanying drawings.

This invention is a form for making concrete monuments of varying sizes, and the object is to promote a simple and practical mold or form having movable sides for facilitating the making of monuments of different sizes.

15 In the drawings:

Figure 1 is a side elevation.

Figure 2 is a top plan view.

Figures 3 and 4 are end views.

20 Figure 5 is a detail of a curved mold board, which may be substituted for the straight mold board when desired.

The invention comprises a table 1, having two of the legs 2 pivoted at 3 to the table top 4, by means of brackets 5 and 6 extended from the table top and legs respectively. The remaining two legs 7 are not directly attached to the table top, but have brackets 8 extended sidewise and adapted to adjustably engage brackets 9 extended downward from the top. These sets of brackets may be interlocked at any desired point by pins 10 inserted through holes 11 in the said brackets. Thus the table top 4

may be readily adjusted. Around the edges of the top 4 are mounted in pairs, sets of spaced brackets 12, 13 and 14 adapted to adjustably engage the brackets 15, 16 and 17 respectively, extended from the mold boards 18, 19 and 20. The side mold boards 19 may be adjusted relatively together or apart, while the end mold board 20 may be adjusted at any position between the side boards 19. Thus monument blocks may be molded of any desired size, within the limits of adjustment of the said mold boards. Pins 21 through holes 22, lock the boards in any desired position.

While I have herein described a certain specific method of constructing and assembling the elements of my invention, it is understood that same may be varied in minor details, not departing from the spirit of my invention, as defined in the appended claim.

I claim:

A concrete monument form, comprising a table, two of the legs thereof having adjustable connection therewith; sets of spaced brackets mounted in pairs around the edges of the top of the table; four mold boards having brackets extended outwardly therefrom and adjustably engaging the said brackets of the table top.

RUDOLPH M. FIALA.
