(54) Title: METHOD OF EXPANDING TESTER DRIVE AND MEASUREMENT CAPABILITY

(57) Abstract: A probe card assembly can comprise an interface, which can be configured to receive from a tester test signals for testing an electronic device. The probe card assembly can further comprise probes for contacting the electronic device and electronic driver circuits for driving the test signals to ones of the probes.

INTERNATIONAL SEARCH REPORT

International application No.

PCT/US07/69798

Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)			
This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:			
Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:			
Claims Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such			
an extent that no meaningful international search can be carried out, specifically:			
3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).			
Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)			
This International Searching Authority found multiple inventions in this international application, as follows: Please See Continuation Sheet			
1. As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.			
As all searchable claims could be searched without effort justifying additional fees, this Authority did not invite payment of any additional fees.			
3. As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:			
······································			
4. No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1-15			
Remark on Protest The additional search fees were accompanied by the applicant's protest and, where applicable, the payment of a protest fee.			
The additional search fees were accompanied by the applicant's protest but the applicable protest fee was not paid within the time limit specified in the invitation.			
No protest accompanied the payment of additional search fees.			

INTERNATIONAL SEARCH REPORT	International application No. PCT/US07/69798			
BOX III. OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.				
Group I, claim(s) 1-15, drawn to a probe card.				
Group II, claim(s) 16-26, drawn to a method of making DC measurements on an elec	etronic device.			
The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature of the group I is directed to a product (probe card) and requires a plurality of interconnected substrates and a wiring board connected to the probe substrate which are not present in Group II. The special feature of Group II is directed to a method of making DC measurements on an electronic device which requires a power source and device for measuring the current flowing through the first and second power inputs which is not present in Group I.
