Dimon B. Barnum of New Fairfield, Connecticut

Letters Patent

The schedule referred to in these Letters Patent and making part of the same containing a description in the words of the said Dimon B. Barnum himself of the improvement in the apparatus for heating water for washing bleaching fulling, dressing, dyeing and clothiers use and for other purposes

Be it known that I Dimon B. Barnum of New Fairfield in the county of Fairfield and State of Connecticut have invented a new and useful improvement in the apparatus for heating water for washing bleaching fulling, dressing, dyeing and clothiers use and for other purposes which is described as following reference being had to the accompanying drawings of the same making part of this specification

The apparatus consists of a cylinder a open at the upper end and having a grate b at the lower end which cylinder is surrounded by another cylinder c untill closed to the former so as to be water tight- leaving a space between the two to contain the water required to be heated which is introduced at the bottom by a pipe e leading from a vessel to be placed above the cylinders into which vessel is inserted another pipe g leading from the upper end of the outer cylinder for conducting the heated water to any vessels through this vessel (a similar tube and vessel may be placed on the other side of the cylinder for the same purpose) the fire is made in the fire chamber h within the inner cylinder the vessel from which the cold water is obtained and into which the hot water is returned may or may

9766X

circulates may be used in the machine for washing cloth fulling cloth or for dusting wearing clothing or for other purposes

What I claim as my invention and which I desire to secure by Letters Patent is as the before described apparatus for heating drying for carrying purposes
