(54) **DERIVES D'ACIDE CARBOXYLIQUE ET HYDROXAMIQUE**

(54) **HYDROXAMIC AND CARBOXYLIC ACID DERIVATIVES**

(57) L'invention concerne de nouveaux composés comprenant des dérivés d'acide carboxylique et hydroxamique utilisés pour traiter le cancer, une inflammation et d'autres états associés aux métalloprotéinases matricielles ou causés par TNF α , ou par des enzymes intervenant dans l'élimination de la L-sélectine, des récepteurs TNF, des récepteurs IL-1 ou des récepteurs IL-6. Ces nouveaux composés sont représentés par la formule (I) $B-X-(CH_2)_m-(CR^1R^2)_n-W-COY$.

(57) For the treatment of cancer, inflammation and other conditions associated with matrix metalloproteinases or that are mediated by TNF α or enzymes involved in the shedding of L-selectin, CD23, the TNF receptors, IL-1 receptors or IL-6 receptors, compounds are of general formula (I) $B-X-(CH_2)_m-(CR^1R^2)_n-W-COY$.

HYDROXAMIC AND CARBOXYLIC ACID DERIVATIVES

Field of the Invention

This invention relates to novel compounds including hydroxamic and carboxylic acid derivatives, and to their use in medicine.

5 Background to the Invention

10 Metalloproteinases, including matrix metalloproteinase (MMP), (human fibroblast) collagenase, gelatinase and TNF convertase (TACE), and their modes of action, and also inhibitors thereof and their clinical effects, are described in WO-A-9611209, WO-A-9712902 and WO-A-9719075, the contents of which are incorporated
15 herein by reference. MMP inhibitors may also be useful in the inhibition of other mammalian metalloproteinases such as the adamalysin family (or ADAMs) whose members include TNF convertase (TACE) and ADAM-10, which can cause the release of TNF α from cells, and others, which have been demonstrated to be expressed by human articular cartilage cells and also involved in the destruction of myelin basic
15 protein, a phenomenon associated with multiple sclerosis.

Compounds which have the property of inhibiting the action of metalloproteinases involved in connective tissue breakdown, such as collagenase, stromelysin and gelatinase, have been shown to inhibit the release of TNF both *in vitro* and *in vivo*. See Gearing *et al* (1994), Nature 370:555-557; McGeehan *et al* (1994),
20 Nature 370:558-561; GB-A-2268934; and WO-A-9320047. All of these reported inhibitors contain a hydroxamic acid zinc-binding group, as do the imidazole-substituted compounds disclosed in WO-A-9523790. Other compounds that inhibit MMP and/or TNF are described in WO-A-9513289, WO-A-9611209, WO-A-96035687, WO-A-96035711, WO-A-96035712 and WO-A-96035714.

25 WO-A-9839316 (which may be prior art under Article 54(3) EPC) discloses compounds of formula I (below) of the type wherein W is CHOH and B is aryl, heteroaryl, cycloalkyl or heterocycloalkyl bonded through carbon to X.

Summary of the Invention

30 The invention encompasses compounds of formula (I), many of which are novel, which are useful inhibitors of matrix metalloproteinases and/or TNF α -mediated diseases, including degenerative diseases and certain cancers.

Compounds according to the invention are of the general type represented by formula (I):

5 wherein

$m = 0-2$;

$n = 1-2$, provided that when $m = 0$ then $n = 2$;

X is S(O)_{0-2} ;

Y is H, OH or NHOH;

10 W is C=O or CHOH , or when Y is H, W may additionally be N-OR^8 ;

R^1 is H or a group (optionally substituted with R^7) selected from C_{1-6} alkyl, C_{2-6} alkenyl, aryl, C_{1-6} alkyl-aryl, heteroaryl, C_{1-6} alkyl-heteroaryl, heterocycloalkyl, C_{1-6} alkyl-heterocycloalkyl, cycloalkyl and C_{1-6} alkyl-cycloalkyl; and

R^2 is H or C_{1-6} alkyl, provided that $(\text{CR}^1\text{R}^2)_n$ is not $(\text{CH}_2)_n$;

15 or CR^1R^2 is a cycloalkyl or heterocycloalkyl ring optionally substituted with R^7 or a group (optionally substituted with R^7) selected from C_{1-6} alkyl, aryl, C_{1-6} alkyl-aryl, heteroaryl and C_{1-6} alkyl-heteroaryl;

20 B is C_{1-6} alkyl-aryl, C_{1-6} alkyl, cycloalkyl, C_{1-6} alkyl-cycloalkyl, cycloalkenyl, heterocycloalkenyl, C_{1-6} alkyl-heteroaryl, heterocycloalkyl, C_{1-6} alkyl-heterocycloalkyl, aryl or heteroaryl, any of which groups is optionally substituted by a substituent selected from R^3 , C_{1-6} alkyl- R^3 , C_{2-6} alkenyl- R^3 , aryl (optionally substituted with R^3), aryl- C_{1-6} alkyl- R^3 , C_{1-6} alkyl-aryl (optionally substituted with R^3), C_{1-6} alkyl-heteroaryl (optionally substituted with R^3), aryl- C_{2-6} alkenyl- R^3 , heteroaryl (optionally substituted with R^3), heteroaryl- C_{1-6} alkyl- R^3 , cycloalkyl (optionally substituted with R^3), or heterocycloalkyl (optionally substituted with R^3);

25 R^3 is C_{1-6} alkyl, halogen, CN, NO_2 , $\text{N(R}^4\text{)}_2$, OR^4 , COR^4 , $\text{C(=NOR}^6\text{)R}^4$, CO_2R^8 , $\text{CON(R}^4\text{)}_2$, NR^4R^5 , $\text{S(O)}_{0-2}\text{R}^6$ or $\text{SO}_2\text{N(R}^4\text{)}_2$;

30 R^4 is H or a group selected from C_{1-6} alkyl, aryl, C_{1-6} alkyl-aryl, heteroaryl, C_{1-6} alkyl-heteroaryl, cycloalkyl, C_{1-6} alkyl-cycloalkyl, heterocycloalkyl and C_{1-6} alkyl-heterocycloalkyl, wherein said group is optionally substituted with R^6 , COR^6 , SO_2R^6 , CO_2R^6 , OR^6 , CONR^8R^6 , NR^8R^6 , halogen, CN, $\text{SO}_2\text{NR}^8\text{R}^6$ or NO_2 , and for each case of $\text{N(R}^4\text{)}_2$ the R^4 groups are the same or different or $\text{N(R}^4\text{)}_2$ is heterocycloalkyl optionally

substituted with R^6 , COR^6 , $SO_{0.2}R^6$, CO_2R^6 , OR^6 , $CONR^6R^6$, NR^6R^6 , halogen, CN, $SO_2NR^6R^6$ or NO_2 ;

R^5 is COR^4 , $CON(R^4)_2$, CO_2R^6 or SO_2R^6 ;

R^6 is C_{1-6} alkyl, aryl, C_{1-6} alkyl-aryl, heteroaryl or C_{1-6} alkyl-heteroaryl;

5 R^7 is OR^4 , COR^4 , CO_2R^8 , $CON(R^4)_2$, NR^4R^5 , $S(O)_{0.2}R^6$, $SO_2N(R^4)_2$, halogen, CN or cycloimidyl (optionally substituted with R^8); and

R^8 is H or C_{1-6} alkyl;

and the salts, solvates, hydrates, N-oxides, protected amino, protected carboxy and protected hydroxamic acid derivatives thereof.

10 Combinations of substituents and/or variables are only permissible if such combinations result in stable compounds.

Description of the Invention

Preferred compounds of the invention are those wherein any one or more of the following apply:

15 X is SO_2 ;

R^1 is optionally substituted C_{1-6} alkyl, C_{1-6} alkyl-heteroaryl, or C_{1-6} alkyl-heterocycloalkyl; or CR^1R^2 forms the said optionally substituted ring;

B is cycloalkyl, heterocycloalkyl, aryl or heteroaryl, any of which groups is optionally substituted by a substituent selected from R^3 , aryl (optionally substituted with R^3) and heteroaryl (optionally substituted with R^3);

R^3 is OR^4 or COR^4 ;

R^4 is optionally substituted aryl, C_{1-6} alkyl-aryl, heteroaryl or C_{1-6} alkyl-heteroaryl; and

25 R^7 is CO_2R^8 , $CON(R^4)_2$, NR^4R^5 , $S(O)_{0.2}R^6$, $SO_2N(R^4)_2$ or optionally substituted cycloimidyl.

The compounds of the Examples are particularly preferred.

It will be appreciated that the compounds according to the invention can contain one or more asymmetrically substituted carbon atoms. The presence of one or more of these asymmetric centres in a compound of formula (I) can give rise to stereoisomers, and in each case the invention is to be understood to extend to all such stereoisomers, including enantiomers and diastereomers, and mixtures including racemic mixtures thereof.

It will further be appreciated that the compounds according to the invention may contain an oxime. This oxime can give rise to geometrical isomers, and in each case the invention is to be understood to extend to all such isomers and mixtures thereof.

As used in this specification, alone or in combination, the term " C_{1-6} alkyl" refers to straight or branched chain alkyl moiety having from one to six carbon atoms, including for example, methyl, ethyl, propyl, isopropyl, butyl, *tert*-butyl, pentyl, hexyl and the like.

The term " C_{2-6} alkenyl" refers to a straight or branched chain alkyl moiety having two to six carbon atoms and having in addition one double bond, of either E or Z stereochemistry where applicable. This term would include for example, vinyl, 1-propenyl, 1- and 2- butenyl, 2- methyl-2-propenyl etc.

The term "cycloalkyl" refers to a saturated alicyclic moiety having from three to six carbon atoms and which is optionally benzofused at any available position. This term includes for example cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, indanyl and tetrahydronaphthyl.

The term "heterocycloalkyl" refers to a saturated heterocyclic moiety having from three to six carbon atoms and one or more heteroatoms selected from N, O, S and oxidised versions thereof, and which is optionally benzofused at any available position. This term includes, for example, azetidiny, pyrrolidinyl, tetrahydrofuranyl, piperidinyl, indolinyl and tetrahydroquinolinyl.

The term "cycloalkenyl" refers to an alicyclic moiety having from three to six carbon atoms and having in addition one double bond. This term includes, for example, cyclopentenyl and cyclohexenyl.

The term "heterocycloalkenyl" refers to an alicyclic moiety having from three to six carbon atoms and one or more heteroatoms selected from N, O, S and oxidised versions thereof, and having in addition one double bond. This term includes, for example, dihydropyranyl.

The term "aryl" refers to an aromatic carbocyclic radical having a single ring or two condensed rings. This term includes, for example phenyl or naphthyl.

The term "heteroaryl" refers to aromatic ring systems of five to ten atoms of which at least one atom is selected from O, N and S, and includes, for example, furanyl, thiophenyl, pyridyl, indolyl, quinolyl and the like.

The term "cycloimidyl" refers to a saturated ring of five to ten atoms containing the atom sequence $-C(=O)NC(=O)-$. The ring may be optionally benzofused at any available position. Examples include succinimidoyl, phthalimidoyl and hydantoinyl.

5 The term "benzofused" refers to the addition of a benzene ring sharing a common bond with the defined ring system.

The term "optionally substituted" means optionally substituted with one or more of the groups specified, at any available position or positions.

The term "halogen" means fluorine, chlorine, bromine or iodine.

10 The terms "protected amino", "protected carboxy" and "protected hydroxamic acid" mean amino, carboxy and hydroxamic acid groups which can be protected in a manner familiar to those skilled in the art. For example, an amino group can be protected by a benzyloxycarbonyl, *tert*-butoxycarbonyl, acetyl or like group, or may be in the form of a phthalimido or like group. A carboxyl group can be protected in the form of an ester such as the methyl, ethyl, benzyl or *tert*-butyl ester. A hydroxamic acid
15 may be protected as either N or O-substituted derivatives, such as O-benzyl or O-*tert*-butyldimethylsilyl.

Salts of compounds of formula (I) include pharmaceutically-acceptable salts, for example acid addition salts derived from inorganic or organic acids, such as hydrochlorides, hydrobromides, p-toluenesulphonates, phosphates, sulphates,
20 perchlorates, acetates, trifluoroacetates, propionates, citrates, malonates, succinates, lactates, oxalates, tartrates and benzoates.

Salts may also be formed with bases. Such salts include salts derived from inorganic or organic bases, for example alkali metal salts such as magnesium or calcium salts, and organic amine salts such as morpholine, piperidine, dimethylamine or
25 diethylamine salts.

When the "protected carboxy" group in compounds of the invention is an esterified carboxyl group, it may be a metabolically-labile ester of formula CO_2R^9 where R^9 may be an ethyl, benzyl, phenethyl, phenylpropyl, α - or β -naphthyl, 2,4-dimethylphenyl, 4-*tert*-butylphenyl, 2,2,2-trifluoroethyl, 1-(benzyloxy)benzyl, 1-
30 (benzyloxy)ethyl, 2-methyl-1-propionyloxypropyl, 2,4,6-trimethylbenzyloxymethyl or pivaloylmethyl group.

Compounds of the general formula (I) may be prepared by any suitable method known in the art and/or by the following processes.

It will be appreciated that, where a particular stereoisomer of formula (I) is required, the synthetic processes described herein may be used with the appropriate homochiral starting material and/or isomers may be resolved from mixtures using conventional separation techniques (e.g. HPLC).

The compounds according to the invention may be prepared by the following process. In the description and formulae below the groups R^1 , R^2 , R^3 , R^4 , R^5 , R^6 , R^7 , R^8 , R^9 , B, W, X and Y are as defined above, except where otherwise indicated. It will be appreciated that functional groups, such as amino, hydroxyl or carboxyl groups, present in the various compounds described below, and which it is desired to retain, may need to be in protected form before any reaction is initiated. In such instances, removal of the protecting group may be the final step in a particular reaction. Suitable protecting groups for such functionality will be apparent to those skilled in the art. For specific details see Greene *et al*, "Protective Groups in Organic Synthesis", Wiley Interscience.

Compound of formula (I) where W is CHOH and Y is OH may be prepared by the hydrolysis of compounds of formula $B-X-(CH_2)_m-(CR^1R^2)_n-CHOH-CN$ (II) by, for example, treatment with inorganic acid such as 7 M HCl at an appropriate temperature, such as 80°C.

Compounds of formula (II) may be prepared by reaction of an aldehyde of formula $B-X-(CH_2)_m-(CR^1R^2)_n-CHO$ (III) with an inorganic cyanide, such as potassium cyanide in an appropriate solvent, such as aqueous $NaHSO_3$.

Compounds of formula (III) may be prepared by reduction of an ester of formula $B-X-(CH_2)_m-(CR^1R^2)_n-CO_2R^{10}$ (IV) where R^{10} represents a suitable group such as methyl or ethyl, by treatment with a reducing agent, such as diisobutylaluminium hydride, in appropriate solvent, such as toluene.

Compounds of formula (IV) where $X=S$ are readily prepared by alkylation of a compound B-SH with an alkylating agent of the form $Z-(CH_2)_m-(CR_1R_2)_n-CO_2R^{10}$ (V), where Z is a leaving group (e.g. a halogen such as bromine, or an alkylsulfonate ester such as methanesulfonate). Many compounds of formula (V) and B-SH are available commercially, or may be prepared by standard chemistry known to those skilled in the art from materials available commercially.

Compounds of formula (I) where W is C=O and Y is OH may also be prepared from compounds of formula (IV) where $R^{10} = H$ by a three step sequence involving (i) reaction with cyanomethylene-triphenylphosphorane, (ii) oxidation with ozone, and (iii) aqueous hydrolysis, as described in *Tetrahedron Lett.*, 1992, 33, 6003 and *J. Org. Chem.*, 1994, 59, 4364.

Compounds of formula (IV) where $m = 1$, $n = 1$ and $R^2 = H$ may also be prepared by the reaction of a compound B-SH with an acrylate of the form $H_2CCR^1CO_2H$ (VI). Compounds (VI) may be prepared by the Mannich reaction (i.e. with paraformaldehyde and piperidine in a suitable organic solvent, such as 1,4-dioxane) on a dicarboxylic acid of general formula $HO_2C-CHR^1-CO_2H$ (VII). This reaction involves an eliminative decarboxylation step resulting in the formation of an α,β -unsaturated carboxylic acid directly.

Dicarboxylic acids of formula (VII) may be prepared by the alkylation of, for instance, diethyl malonate with an alkylating agent of formula R^1-Z (VIII), wherein Z is as defined above, followed by hydrolysis under basic conditions. Many alkylating agents of general formula (VIII) are available commercially or may be prepared from materials available commercially by methods known to those skilled in the art.

Compounds of formula (I) where Y is H and W is N-OR⁸ may be prepared by N-formylation of a compound of formula $B-X-(CH_2)_m-(CR^1R^2)_n-NHOR^8$ (IX). Compounds of formula (IX) where $m = 1$, $n = 1$ and $X = SO_2$ may be prepared by the addition of R^8ONH_2 to a vinyl sulfone of formula $B-SO_2-CHCR^1R^2$ (X). This reaction may be performed in a suitable organic solvent, such as tetrahydrofuran, in the presence of an organic base, such as triethylamine. Compounds of formula (X) may be prepared by the condensation of a sulfone of formula $B-SO_2-CH_3$ (XI) with a ketone of formula R_1COR_2 (XII). Suitable conditions for this reaction are an appropriate base, such as sodium hydride, in an inert solvent, such as THF. Many sulfones (XI) and ketones (XII) are known, or may be prepared readily by methods known to those skilled in the art.

Compounds of formula (IX) may be prepared alternatively by N-oxidation of an amine of formula $B-X-(CH_2)_m(CR^1R^2)_nNH_2$ (XIII) in a three step process involving (i) reaction of the free amine with an aldehyde to give an appropriate imine, (ii) reaction of the imine with an oxidising agent such as *meta*-chloroperbenzoic acid to give the

corresponding oxaziridine, and (iii) cleavage of the oxaziridine with a hydroxylamine to give the target hydroxylamine of formula (IX) (for example, see *Synthesis*, 1987, 1115).

Amines of formula (XIII) may be prepared by either (when X is SO₂ and B is linked through nitrogen to X) reaction of B with an acylating agent of formula
 5 Z-SO₂-(CH₂)_m(CR¹R²)_nNHR¹¹ (XIX), or (when X is S and B is linked through carbon to X) reaction of a sulfanyl compound of formula B-SH with a alkylating agent of formula
 Z-(CH₂)_m(CR¹R²)_nNHR¹¹ (XX), wherein R¹¹ is a suitable amine protecting group (see
 Greene *et al*, "Protecting Groups in Organic Synthesis", Wiley Interscience) which may
 be removed after these transformations. Compounds of formula (XIX) may in turn be
 10 prepared from compounds of formula (XX) by reaction with a compound of formula
 Q-SH, where Q is a suitable labile group such as acetyl, followed by reaction with, for
 example, chlorine and water, to give a compound of formula (XIX) where Z is Cl.

Compounds of formula (XX) are available commercially or may be prepared from
 materials available commercially by methods known to those skilled in the art. For
 15 example, compounds (XX) where m=1 and n=1 may be prepared from amino acids of
 formula HO₂CCR¹R²NHR¹¹ (XXI) by a two-step sequence involving (i) reduction of the
 acid to a primary alcohol of formula HOCH₂CR¹R²NHR¹¹ (XXII) with a suitable reagent
 such as borane in an inert solvent, and (ii) conversion of the primary alcohol to a leaving
 group for example by reaction with methanesulfonyl chloride in the presence of an
 20 organic base such as triethylamine in an inert solvent, to give a compound of formula
 (XX) where Z is methanesulfonate. Compounds of formula (XXI) are known, or may be
 prepared by known methods.

Compounds of formula (I) or any appropriate intermediate may also be prepared
 by interconversion of compounds of the same formula. Thus, for example, a compound
 25 of formula (I) wherein R¹ is a C₁₋₆ alkyl group may be prepared by hydrogenation (using
 palladium on carbon in suitable solvent, such as an alcohol, e.g. ethanol) of a compound
 of formula (I) wherein R¹ is a C₂₋₆ alkenyl group. A compound of formula (I) where W
 is C=O may be prepared from a compound where W is CHOH by oxidation with, for
 example oxalyl chloride and dimethyl sulfoxide in the presence of an organic base such
 30 as triethylamine. Compounds of formula (I) where Y=NHOH may be prepared from a
 compound where Y=OH using standard chemistry, known to those skilled in the art,

optionally *via* the intermediate preparation of hydroxamides NHOR^{12} where R^{12} is a suitable protecting group such as benzyl, *tert*-butyl or *tert*-butyldimethylsilyl (TBDMS).

Similarly, a compound of formula (I), (IV), (IX), (XIII), (XIX) or any other appropriate intermediate, where $\text{X}=\text{SO}_2$, may be prepared from a corresponding compound where $\text{X}=\text{S}$ by oxidation with, for example Oxone[®] in appropriate solvent, such as methanol-water.

Any mixtures of final products or intermediates obtained can be separated on the basis of the physico-chemical differences of the constituents, in known manner, into the pure final products or intermediates, for example by chromatography, distillation, fractional crystallization, or by formation of a salt if appropriate or possible under the circumstances.

The compounds according to the invention exhibit *in vitro* inhibiting activities with respect to the stromelysins, collagenases and gelatinases. Compounds according to the invention may also exhibit *in vitro* inhibition of membrane shedding events known to be mediated by metalloproteinases, for example, α -APP, ACE, TGF- α , TNF- α , Fas ligand, TNFR-I, TNFR-II, CD30, IL-6R, CD43, CD44, CD16-I, CD16-II, Folate receptor, CD23, or IL-1RII.

The activity and selectivity of the compounds may be determined by use of the appropriate enzyme inhibition test, for example as described in Examples A-M of WO-A-9805635, by the assay for the inhibition of CD23 shedding described in PCT/GB98/03395, or by the following assay of TNF RI shedding.

The potency of the compounds of general formula (I) to act as inhibitors of the production of TNF RI is determined using the following procedure. A 100 μM solution of the inhibitor being tested or dilutions thereof is incubated at 37° C in an atmosphere of 5% CO_2 with peripheral blood mononuclear cells (PBMC). PBMC are isolated from buffy coats by standard procedures using Ficoll. A 100 μM solution of the inhibitor being tested or dilutions thereof is incubated for 22 hours at 37° C in an atmosphere of 5% CO_2 with $1 \times 10^6/\text{ml}$ PBMC stimulated with LPS. The cells are centrifuged down and the supernatant is assayed for TNF RI using a commercially available ELISA kit (R & D Systems). The activity in the presence of 0.1mM inhibitor or dilutions thereof is compared to activity in a control devoid of inhibitor and results reported as that inhibitor concentration effecting 50% inhibition of the production of TNF RI.

This invention also relates to a method of treatment for patients (including man and/or mammalian animals raised in the dairy, meat or fur industries or as pets) suffering from disorders or diseases which can be attributed to stromelysin as previously described, and more specifically, a method of treatment involving the administration of the matrix metalloproteinase inhibitors of formula (I) as the active constituents.

Accordingly, the compounds of formula (I) can be used among other things in the treatment of osteoarthritis and rheumatoid arthritis, and in diseases and indications resulting from the over-expression of these matrix metalloproteinases such as found in certain metastatic tumour cell lines.

As mentioned above, compounds of formula (I) are useful in human or veterinary medicine since they are active as inhibitors of TNF and MMPs. Accordingly in another aspect, this invention concerns:

a method of management (by which is meant treatment or prophylaxis) of disease or conditions mediated by TNF and/or MMPs in mammals, in particular in humans, which method comprises administering to the mammal an effective, amount of a compound of formula (I) above, or a pharmaceutically acceptable salt thereof; and

a compound of formula (I) for use in human or veterinary medicine, particularly in the management (by which is meant treatment or prophylaxis) of diseases or conditions mediated by TNF and/or MMPs; and

the use of a compound of formula (I) in the preparation of an agent for the management (by which is meant treatment or prophylaxis) of diseases or conditions mediated by TNF and/or MMPs.

The disease or conditions referred to above include inflammatory diseases, autoimmune diseases, cancer, cardiovascular diseases, diseases involving tissue breakdown such as rheumatoid arthritis, osteoarthritis, osteoporosis, neurodegeneration, Alzheimer's disease, stroke, vasculitis, Crohn's disease, ulcerative colitis, multiple sclerosis, periodontitis, gingivitis and those involving tissue breakdown such as bone resorption, haemorrhage, coagulation, acute phase response, cachexia and anorexia, acute infections, HIV infections, fever, shock states, graft versus host reactions, dermatological conditions, surgical wound healing, psoriasis, atopic dermatitis, epidermolysis bullosa, tumour growth, angiogenesis and invasion by secondary metastases, ophthalmological disease, retinopathy, corneal ulceration, reperfusion injury,

migraine, meningitis, asthma, rhinitis, allergic conjunctivitis, eczema, anaphylaxis, restenosis, congestive heart failure, endometriosis, atherosclerosis, endosclerosis and aspirin-independent anti-thrombosis.

Compounds of formula (I) may also be useful in the treatment of pelvic inflammatory disease (PID), age-related macular degeneration and cancer-induced bone resorption. Further, they can be used in the treatment of lung diseases, e.g. selected from cystic fibrosis, adult respiratory distress syndrome (ARDS), emphysema, bronchitis obliterans-organising pneumonia (BOOP), idiopathic pulmonary fibrosis (PIF), diffuse alveolar damage, pulmonary Langerhan's cell granulomatosis, pulmonary lymphangioliomyomatosis (LAM) and chronic obstructive pulmonary disease (COPD).

For the treatment of rheumatoid arthritis, osteoarthritis, and in diseases and indications resulting from the over-expression of matrix metalloendoproteinases such as found in certain metastatic tumour cell lines or other diseases mediated by the matrix metalloendoproteinases or increased TNF production, the compounds of formula (I) may be administered orally, topically, parenterally, by inhalation spray or rectally in dosage unit formulations containing non-toxic pharmaceutically acceptable carriers, adjuvants and vehicles. The term parenteral as used herein includes subcutaneous injections, intravenous, intramuscular, intrasternal injection or infusion techniques. In addition to the treatment of warm-blooded animals such as mice, rats, horses, cattle, sheep, dogs, cats etc, the compounds of the invention are effective in the treatment of humans.

The pharmaceutical composition containing the active ingredient may be in a form suitable for oral use, for example, as tablets, troches, lozenges, aqueous or oily suspensions, dispersible powders or granules, emulsions, hard or soft capsules, or syrups or elixirs. Compositions intended for oral use may be prepared according to any method known to the art for the manufacture of pharmaceutical compositions and such compositions may contain one or more agents selected from the group consisting of sweetening agents, flavouring agents, colouring agents and preserving agents in order to provide pharmaceutically elegant and palatable preparations. Tablets contain the active ingredient in admixture with non-toxic pharmaceutically acceptable excipients which are suitable for the manufacture of tablets. These excipients may be for example, inert diluents, such as calcium carbonate, sodium carbonate, lactose, calcium phosphate or sodium phosphate; granulating and disintegrating agents, for example corn starch, or

alginic acid; binding agents, for example starch, gelatin or acacia, and lubricating agents, for example magnesium stearate, stearic acid or talc. The tablets may be uncoated or they may be coated by known techniques to delay disintegration and absorption in the gastrointestinal tract and thereby provide a sustained action over a longer period. For
5 example, a time delay material such as glyceryl monostearate or glyceryl distearate may be employed. They may also be coated by the techniques described in the US Patents 4,256,108; 4,166,452; and 4,265,874, to form osmotic therapeutic tablets for control release.

Formulations for oral use may also be presented as hard gelatin capsules where
10 in the active ingredient is mixed with an inert solid diluent, for example calcium carbonate, calcium phosphate or kaolin, or as soft gelatin capsules wherein the active ingredient is mixed with water or an oil medium, for example peanut oil, liquid paraffin or olive oil.

Aqueous suspensions contain the active materials in admixture with excipients
15 suitable for the manufacture of aqueous suspensions. Such excipients are suspending agents, for example sodium carboxymethylcellulose, methylcellulose, hydroxypropylmethylcellulose, sodium alginate polyvinyl-pyrrolidone, gum tragacanth and gum acacia; dispersing or wetting agents may be a naturally occurring phosphatide, for example lecithin, or condensation products of an alkylene oxide with fatty acids, for
20 example polyoxyethylene stearate, or condensation products of ethylene oxide with long chain aliphatic alcohols, for example heptadecaethyleneoxycetanol, or condensation products of ethylene oxide with partial esters derived from fatty acids and a hexitol such a polyoxyethylene with partial esters derived from fatty acids and hexitol anhydrides, for example polyoxyethylene sorbitan monooleate. The aqueous suspensions may also
25 contain one or more preservatives, for example ethyl, or n-propyl, p-hydroxybenzoate, one or more colouring agents, one or more flavouring agents, and one or more sweetening agents, such as sucrose or saccharin.

Oily suspensions may be formulated by suspending the active ingredient in a vegetable oil, for example arachis oil, olive oil, sesame oil or coconut oil, or in a mineral
30 oil such as liquid paraffin. The oily suspensions may contain a thickening agent, for example beeswax, hard paraffin or cetyl alcohol. Sweetening agents such as those set forth above, and flavouring agents may be added to provide a palatable oral preparation.

These compositions may be preserved by the addition of an anti-oxidant such as ascorbic acid.

Dispersible powders and granules suitable for preparation of an aqueous suspension by the addition of water provide the active ingredient in admixture with a dispersing or wetting agent, suspending agent and one or more preservatives. Suitable
5 dispersing or wetting agents and suspending agents are exemplified, for example sweetening, flavouring and colouring agents, may also be present.

The pharmaceutical compositions of the invention may also be in the form of oil-in-water emulsions. The oily phase may be a vegetable oil, for example olive oil or
10 arachis oil, or a mineral oil, for example liquid paraffin or mixtures of these. Suitable emulsifying agents may be naturally- occurring gums, for example gum acacia or gum tragacanth, naturally-occurring phosphatides, for example soya bean, lecithin, and esters or partial esters derived from fatty acids and hexitol anhydrides, for example sorbitan monooleate and condensation products of the said partial esters with ethylene oxide, for
15 example polyoxyethylene sorbitan monooleate. The emulsions may also contain sweetening and flavouring agents.

Syrups and elixirs may be formulated with sweetening agents, for example glycerol, propylene glycol, sorbitol or sucrose. Such formulations may also contain a demulcent, a preservative and flavouring and colouring agents. The pharmaceutical
20 compositions may be in the form of a sterile injectable aqueous or oleagenous suspension. This suspension may be formulated according to the known art using those suitable dispersing or wetting agents and suspending agents which have been mentioned above. The sterile injectable preparation may also be in a sterile injectable solution or suspension in a non-toxic parenterally-acceptable diluent or solvent, for example as a
25 solution in 1,3-butane diol. Among the acceptable vehicles and solvents that may be employed are water, Ringer's solution and isotonic sodium chloride solution. In addition, sterile, fixed oils are conventionally employed as a solvent or suspending medium. For this purpose any bland fixed oil may be employed including synthetic mono- or diglycerides. In addition, fatty acids such as oleic acid find use in the preparation of
30 injectables.

The compounds of formula (I) may also be administered in the form of suppositories for rectal administration of the drug. These compositions can be prepared

by mixing the drug with a suitable non-irritating excipient which is solid at ordinary temperatures but liquid at the rectal temperature and will therefore melt in the rectum to release the drug. Such materials are cocoa butter and polyethylene glycols.

For topical use, creams, ointments, jellies, solutions or suspensions, etc
5 containing the compounds of Formula (I) are employed. For the purposes of this specification, topical application includes mouth washes and gargles.

Dosage levels of the order of from about 0.05 mg to about 140 mg per kilogram
of body weight per day are useful in the treatment of the above- indicated conditions
(about 2.5 mg to about 7 g per patient per day). For example, inflammation may be
10 effectively treated by the administration of from about 0.01 to 50 mg of the compound
per kilogram of body weight per day (about 0.5 mg to about 3.5 g per patient per day).

The amount of active ingredient that may be combined with the carrier materials
to produce a single dosage form will vary depending upon the host treated and the
particular mode of administration. For example, a formulation intended for the oral
15 administration of humans may vary from about 5 to about 95% of the total composition.
Dosage unit forms will generally contain between from about 1 mg to about 500 mg of
active ingredient.

It will be understood, however, that the specific dose level for any particular
patient will depend upon a variety of factors including the activity of the specific
20 compound employed, the age, body weight, general health, sex, diet time of
administration, route of administration, rate of excretion, drug combination and the
severity of the particular disease undergoing therapy.

The following Examples illustrate the invention. The following abbreviations
apply: DMF is dimethylformamide; RT is room temperature; THF is tetrahydrofuran.

25 **Intermediate 1** 2-[(4-Methoxybenzenesulfonyl)methyl]-5-phenylpentanoic
Acid

Was prepared according to the procedure described WO-A-9805635, as a
colourless solid (2.5 g).

30 **Intermediate 2** Methyl 2-[(4-Methoxybenzenesulfonyl)methyl]-5-
phenylpentanoate

Employing a diazomethane kit, the reaction vessel was charged with potassium
hydroxide (2.50 g), ethanol (5 ml) and water (4 ml), and the mixture heated in a water

bath held at 65-70°C. Diazald (2.50 g), as a solution in diethyl ether (25 ml), was added dropwise to the reaction vessel (with caution), and the distillate collected in a trap cooled with carbon dioxide / acetone. Once the addition was complete, the diazald addition flask was rinsed into the reaction vessel with diethyl ether (2 x 1 ml), until the distillate was colourless. The pale yellow diazomethane solution thus collected was then added cautiously to a stirred, ice-cold solution of intermediate 1 (2.00 g) in tetrahydrofuran (25 ml). The mixture was then stirred in ice for one hour, after which time it was warmed to room temperature and purged with nitrogen until colourless. The solution was treated with a few drops of acetic acid to remove traces of diazomethane, and concentrated to dryness *in vacuo* to give the title compound (2.23 g, 100%) as a colourless oil.

TLC R_f 0.67 (50% hexane / ethyl acetate with trace acetic acid)

Intermediate 3 2-[(4-Methoxybenzenesulfonyl)methyl]-5-phenylpentanal

Diisobutylaluminium hydride, as a 1.5 M toluene solution (7.5 ml), was added dropwise *via* syringe over *ca.* 45 minutes to a stirred solution of Intermediate 2 (2.82 g) in anhydrous toluene (30 ml), ensuring the temperature remained below -65°C. The mixture was maintained at this temperature for a further 45 minutes, after which time methanol (5 ml) was added dropwise, followed by 1 M hydrochloric acid (4 ml). After warming to room temperature, diethyl ether (25 ml) and 1 M hydrochloric acid (45 ml) were added, layers separated, and the aqueous phase extracted with diethyl ether (2 x 25 ml). The combined organic extracts were then washed with water (2 x 10 ml), brine (15 ml), dried (MgSO₄) and reduced *in vacuo* to leave a colourless oil (2.63 g). Purification by chromatography on silica, with 3% diethyl ether / dichloromethane as eluent provided the title compound (1.84 g, 71%) as a colourless oil.

TLC R_f 0.47 (3% diethyl ether / dichloromethane)

MS 364 (M+NH₄⁺)

Intermediate 4 1-Cyano-2-[(4-methoxybenzenesulfonyl)methyl]-5-phenylpentanol

Intermediate 3 (1.724 g) was stirred vigorously with sodium metabisulfite (1.703 g) in water (10 ml) and ethanol (2 ml), and after 30 minutes, the suspension produced was treated with a solution of potassium cyanide (with caution) (0.486 g) in water (10 ml). After 2 hours, the mixture was extracted with diethyl ether (2x25 ml), and the

combined extracts washed with water (20 ml), dried (MgSO_4), and reduced to give the title compound (1.463 g, 79%) as a colourless oil.

TLC R_f 0.24 (3% diethyl ether / dichloromethane).

Intermediate 5 **4-(4-Methoxybenzenesulfonylmethyl)-3-oxo-7-phenyl-2-(triphenylphosphanyl-idene)heptanenitrile**

To a stirred solution of Intermediate 1 (2.00g), in dichloromethane (50 ml) and DMF (1 drop) at 0 °C was added oxalyl chloride (3.50g). Stirring was continued for 15 mins at 0 °C and then for 45 mins at RT. The solvent was removed *in vacuo*. The residue was dissolved in dichloromethane (10 ml) and added to a solution of triphenylphosphoranylideneacetonitrile (1.84 g) and bistrimethylacetamide (1.68g) in dichloromethane (80 ml) at 0 °C under nitrogen. Stirring was continued for 10 mins at 0 °C and then at room temperature for 3h. The reaction mixture was diluted with dichloromethane (100 ml) and washed with water (3 x 50 ml), sodium hydroxide solution (0.5 M; 50 ml), water (2 x 50 ml), brine (50 ml) and dried (MgSO_4). Filtration, evaporation of the solvent and purification of the residue by silica gel column chromatography, eluting with a mixture of 1:1 hexane/ethyl acetate containing a trace amount of acetic acid, gave the title compound (1.24 g, 35%) as a colourless foam. TLC R_f 0.32 (1:1 hexane/ethyl acetate, trace acetic acid).

Intermediate 6 **Methanesulfonic Acid, 2S-tert-Butoxycarbonylamino-3-methyl-butyl Ester**

L-Boc-Valinol (5 g) in dichloromethane (100 ml) was cooled in ice, and triethylamine (3.8 ml) and methanesulfonyl chloride (2.0 ml) were added dropwise. The cold solution was stirred for 2 h, then washed with water and brine, dried over MgSO_4 and evaporated to give the title compound (6.2 g, 95%) as colourless solid.

TLC R_f 0.75 (ether)

Intermediate 7 **Thioacetic Acid, S-(2S-tert-butoxycarbonylamino-3-methyl-butyl) Ester**

A solution of Intermediate 6 (6.0 g) was stirred at room temperature in dimethylformamide (50 ml) with potassium thioacetate (4.0 g) for 18 h. The resulting thick suspension was diluted with water, extracted with ether (2 x 100 ml) and the solvent was washed with water, aqueous sodium bicarbonate solution and brine, then dried over MgSO_4 and evaporated to give the title compound (5.2 g, 88%) as beige solid.

TLC R_f 0.43 (1:1 ether/hexanes).

Intermediate 8 (1S-Chlorosulfonylmethyl-2-methylpropyl)carbamic Acid,
tert-Butyl Ester

Chlorine gas was bubbled through a solution of Intermediate 7 (2.0 g) in water
5 (50 ml) and dichloromethane (50 ml) at 0°C for 20 min, then the suspension was stirred
vigorously for 20 min. The phases were separated and the organic layer was washed
with iced water and brine, then dried over MgSO₄ and evaporated to give the title
compound (2.20 g, 100%) as colourless solid.

TLC R_f 0.35 (1:1 ether/hexanes).

10 **Intermediate 9** {1S-[4-(4-Chlorophenyl)piperazine-1-sulfonylmethyl]-2-
methylpropyl}carbamic Acid, *tert*-Butyl Ester

A suspension of 4-chlorophenylpiperazine dihydrochloride (2.0 g) and
triethylamine (3.3 ml) in dichloromethane (100 ml) was stirred for 10 minutes, then
cooled in ice and a solution of Intermediate 8 was added dropwise. The mixture was
15 stirred vigorously for 3 h, then washed with water, saturated aqueous sodium
bicarbonate solution and brine. The organic layer was then dried over MgSO₄ and
evaporated to give the title compound (2.50 g, 73%) as colourless crystalline solid.

TLC R_f 0.63 (ether).

20 **Intermediate 10** 1S-[4-(4-Chlorophenyl)piperazine-1-sulfonylmethyl]-2-
methylpropylamine

A solution of Intermediate 9 (2.50 g) in dichloromethane (60 ml) was treated
with trifluoroacetic acid (30 ml), and the mixture was stirred for 2 h. The mixture was
then evaporated to dryness and azeotroped with dichloromethane and hexanes. The
residue was dissolved in water (100 ml) and the solution washed with ether. The
25 aqueous layer was basified with 48 % aqueous NaOH and the resulting suspension was
extracted with EtOAc (3 x 100 ml). The solvent was washed with brine, dried over
MgSO₄ and evaporated to give the title compound (1.85 g, 95%) as colourless solid.

TLC R_f 0.15 (ether)

30 **Intermediate 11** {1S-[4-(4-Chlorophenyl)piperazine-1-sulfonylmethyl]-2-
methylpropyl}-(4-methoxybenzylidene)amine

A solution of Intermediate 10 (1.8 g) and *para*-anisaldehyde (1.2 ml) in methanol
(100 ml) was stirred with solid sodium carbonate (2 g) for 18 h at room temperature.

The suspension was filtered and the filtrate evaporated and triturated with ethyl acetate (200 ml). The mixture was filtered and the filtrate evaporated to give the title compound (2.50 g, 100%) as a viscous pale yellow oil.

TLC R_f 0.54 (ether/hexanes 1:2).

5 **Intermediate 12** 1-(4-Chlorophenyl)-4-{2S-[3-(4-methoxyphenyl)oxaziridin-2-yl]-3-methylbutane-1-sulfonyl}piperazine

A solution of *meta*-chloroperbenzoic acid (1.2 g) in dichloromethane was dried over magnesium sulfate and then added dropwise to a solution of Intermediate 11 (2.5 g) in dry dichloromethane at -10°C over 30 min. The mixture was stirred for 2 h, then
10 washed with saturated aqueous sodium bicarbonate solution, water and brine, then dried over MgSO_4 and evaporated to give the product (2.50 g, 95%) as viscous oil.

TLC R_f 0.34 (2:1 hexanes/ether)

Intermediate 13 *N*-{1S-[4-(4-Chlorophenyl)piperazine-1-sulfonylmethyl]-2-methylpropyl}-hydroxylamine

15 Hydroxylamine hydrochloride (2.0 g) was added to a solution of Intermediate 12 (2.5 g) in methanol (50 ml) at room temperature. The solution was stirred overnight, then evaporated *in vacuo* and the residue dissolved in water and washed with ether (2 x 50 ml). The aqueous layer was basified with solid sodium bicarbonate and then extracted with ethyl acetate (2x 50 ml) and evaporated to give the crude hydroxylamine
20 (1.2 g, 70%) which was used without purification.

TLC R_f 0.20 (EtOAc)

Example 1 2-Hydroxy-3-[(4-methoxybenzenesulfonyl)methyl]-6-phenylhexanoic Acid

Intermediate 4 (1.443 g) was heated to reflux with 7 M hydrochloric acid (30 ml)
25 for 2 hours. The mixture was then cooled, and extracted with dichloromethane (2 x 20ml). The dichloromethane extracts were then reduced to 20 ml, diluted with diethyl ether (100 ml), and extracted with 1 M sodium carbonate solution (2x10 ml). The combined basic extracts were washed with ethyl acetate (10 ml), acidified with 12 M hydrochloric acid, and extracted with dichloromethane (2x15 ml). The dichloromethane
30 extracts were then washed with water (10 ml), dried (MgSO_4), and reduced to give the title compound as an off-white solid (0.888 g, 59%).

TLC R_f 0.35 (5% methanol / dichloromethane)

MS 410 (M+NH₄⁺)

Example 2 Methyl 3-(4-Methoxybenzenesulfonylmethyl)-2-oxo-6-phenylhexanoate

To a stirred solution of Intermediate 5 (330 mg) in dichloromethane/methanol (7:3; 10 ml) at -78 °C was introduced ozone until the blue colouration persisted. Nitrogen gas was passed through the solution until it was colourless and it was then allowed to warm to RT. Stirring was continued for 30 mins before the solvent was removed *in vacuo* and the residue purified by silica gel column chromatography, eluting with hexane/ethyl acetate (2:1), to yield the title product as a white solid, (89 mg, 43%).
m.p. 95 °C.

TLC R_f 0.31 (2:1 hexane/ethyl acetate)

Example 3 3-(4-Methoxy-benzenesulfonylmethyl)-2-oxo-6-phenylhexanoic Acid

To a stirred solution of Example 2 (47 mg) in dioxane (5 ml) in an ice-salt bath was added a solution of lithium hydroxide (24 mg) in water (2 ml). Stirring was continued for 90 mins before diluting with water (30 ml) and washing with dichloromethane (2 x 10 ml). The aqueous layer was acidified (2M HCl) and extracted with ethyl acetate (4 x 10 ml). The combined ethyl acetate extracts were washed with water (2 x 10 ml), brine (10 ml) and dried (MgSO₄). Filtration and evaporation of the solvent and purification of the residue by silica gel column chromatography eluting with hexane/ethyl acetate/acetic acid (1:1:0.002) yielded the *title compound* as a colourless oil (30 mg; 67 %).

TLC R_f 0.36 (1:1 hexane/ethyl acetate and 0.2% acetic acid).

MS 390 (M⁺)

Example 4 N-{1S-[4-(4-Chlorophenyl)piperazine-1-sulfonylmethyl]-2-methylpropyl}-N-hydroxyformamide

Intermediate 13 (1.2 g) was stirred in a mixture of THF (50 ml), ethyl formate (2 ml) and triethylamine (1 ml) at reflux for 3 h. The solvent was then evaporated *in vacuo* and the residue purified by flash column chromatography over silica gel, eluting with 5% methanol in dichloromethane, to give the title compound (0.15 g, 11%) as colourless solid.

TLC R_f 0.37 (5% MeOH/CH₂Cl₂)

CLAIMS

1. A compound of formula (I)

5

wherein

 $m = 0-2$; $n = 1-2$, provided that when $m = 0$ then $n = 2$; X is $S(O)_{0-2}$;

10

R^1 is H or a group (optionally substituted with R^7) selected from C_{1-6} alkyl, C_{2-6} alkenyl, aryl, C_{1-6} alkyl-aryl, heteroaryl, C_{1-6} alkyl-heteroaryl, heterocycloalkyl, C_{1-6} alkyl-heterocycloalkyl, cycloalkyl and C_{1-6} alkyl-cycloalkyl; and

R^2 is H or C_{1-6} alkyl, provided that $(CR^1R^2)_n$ is not $(CH_2)_n$;

or CR^1R^2 is a cycloalkyl or heterocycloalkyl ring optionally substituted with R^7

15

or a group (optionally substituted with R^7) selected from C_{1-6} alkyl, aryl, C_{1-6} alkyl-aryl, heteroaryl and C_{1-6} alkyl-heteroaryl;

20

B is C_{1-6} alkyl-aryl, C_{1-6} alkyl, cycloalkyl, C_{1-6} alkyl-cycloalkyl, cycloalkenyl, heterocycloalkenyl, C_{1-6} alkyl-heteroaryl, heterocycloalkyl, C_{1-6} alkyl-heterocycloalkyl, aryl or heteroaryl, any of which groups is optionally substituted by a substituent selected from R^3 , C_{1-6} alkyl- R^3 , C_{2-6} alkenyl- R^3 , aryl (optionally substituted with R^3), aryl- C_{1-6} alkyl- R^3 , C_{1-6} alkyl-aryl (optionally substituted with R^3), C_{1-6} alkyl-heteroaryl (optionally substituted with R^3), aryl- C_{2-6} alkenyl- R^3 , heteroaryl (optionally substituted with R^3), heteroaryl- C_{1-6} alkyl- R^3 , cycloalkyl (optionally substituted with R^3), or heterocycloalkyl (optionally substituted with R^3);

25

R^3 is C_{1-6} alkyl, halogen, CN, NO_2 , $N(R^4)_2$, OR^4 , COR^4 , $C(=NOR^6)R^4$, CO_2R^8 , $CON(R^4)_2$, NR^4R^5 , $S(O)_{0-2}R^6$ or $SO_2N(R^4)_2$;

30

R^4 is H or a group selected from C_{1-6} alkyl, aryl, C_{1-6} alkyl-aryl, heteroaryl, C_{1-6} alkyl-heteroaryl, cycloalkyl, C_{1-6} alkyl-cycloalkyl, heterocycloalkyl and C_{1-6} alkyl-heterocycloalkyl, wherein said group is optionally substituted with R^6 , COR^6 , $SO_{0-2}R^6$, CO_2R^6 , OR^6 , $CONR^8R^6$, NR^8R^6 , halogen, CN, $SO_2NR^8R^6$ or NO_2 , and for each case of $N(R^4)_2$ the R^4 groups are the same or different, or $N(R^4)_2$ is heterocycloalkyl optionally

substituted with R^6 , COR^6 , $SO_{0.2}R^6$, CO_2R^6 , OR^6 , $CONR^8R^6$, NR^8R^6 , halogen, CN, $SO_2NR^8R^6$ or NO_2 ;

R^5 is COR^4 , $CON(R^4)_2$, CO_2R^6 or SO_2R^6 ;

R^6 is C_{1-6} alkyl, aryl, C_{1-6} alkyl-aryl, heteroaryl or C_{1-6} alkyl-heteroaryl;

5 R^7 is OR^4 , COR^4 , CO_2R^8 , $CON(R^4)_2$, NR^4R^5 , $S(O)_{0.2}R^6$, $SO_2N(R^4)_2$, halogen, CN or cycloimidyl (optionally substituted with R^8); and

R^8 is H or C_{1-6} alkyl;

or a salt, hydrate, N-oxide or protected amino derivative thereof.

2. A compound of claim 1, wherein R^1 is optionally substituted C_{1-6} alkyl, C_{1-6} alkyl-heteroaryl, or C_{1-6} alkyl-heterocycloalkyl; or CR^1R^2 forms the said optionally substituted ring.

3. A compound of claim 1 or claim 2, wherein B is cycloalkyl, heterocycloalkyl, aryl or heteroaryl, any of which groups is optionally substituted by a substituent selected from R^3 , aryl (optionally substituted with R^3) and heteroaryl (optionally substituted with R^3).

15 4. A compound of any preceding claim, wherein R^3 is OR^4 or COR^4 .

5. A compound of any preceding claim, wherein R^4 is optionally substituted aryl, C_{1-6} alkyl-aryl, heteroaryl or C_{1-6} alkyl-heteroaryl.

6. A compound of any preceding claim, wherein R^7 is CO_2R^8 , $CON(R^4)_2$, NR^4R^5 , $S(O)_{0.2}R^6$, $SO_2N(R^4)_2$ or optionally substituted cycloimidyl.

20 7. A compound of any preceding claim, wherein X is SO or SO_2 .

8. A compound of claim 7, wherein X is SO_2 .

9. A compound of any preceding claim, wherein B is optionally substituted heterocycloalkenyl, heterocycloalkyl or heteroaryl and includes a N heteroatom bonded to X.

25 10. A compound of claim 9, wherein B is optionally substituted azetidiny, pyrrolidinyl, tetrahydrofuranyl, piperidinyl, indoliny and tetrahydroquinoliny, pyridyl, indolyl or quinolyl.

11. A compound of claim 1, which is *N*-{1*S*-[4-(4-chlorophenyl)piperazine-1-sulfonylmethyl]-2-methylpropyl}-*N*-hydroxyformamide.

30 12. A compound of any preceding claim, in the form of a single enantiomer or diastereomer.

13. A pharmaceutical composition for use in therapy, comprising a compound as defined in any preceding claim, and a pharmaceutically-acceptable diluent or carrier.
14. Use of a compound of any of claims 1 to 12, for the manufacture of a medicament for the treatment or prevention of a condition associated with matrix metalloproteinases or that is mediated by TNF α or enzymes involved in the shedding of *L*-selectin, CD23, the TNF receptors, IL-1 receptors or IL-6 receptors.
15. Use according to claim 14, wherein the condition is selected from cancer, inflammation and inflammatory diseases, tissue degeneration, periodontal disease, ophthalmological disease, dermatological disorders, fever, cardiovascular effects, haemorrhage, coagulation and acute phase response, cachexia, anorexia, acute infection, HIV infection, shock states, graft versus host reactions, autoimmune disease, reperfusion injury, meningitis, migraine and aspirin-independent anti-thrombosis.
16. Use according to claim 14, wherein the condition is selected from tumour growth, angiogenesis, tumour invasion and spread, metastases, malignant ascites and malignant pleural effusion.
17. Use according to claim 14, wherein the condition is selected from cerebral ischaemia, ischaemic heart disease, rheumatoid arthritis, osteoarthritis, osteoporosis, asthma, multiple sclerosis, neurodegeneration, Alzheimer's, atherosclerosis, stroke, vasculitis, Crohn's disease and ulcerative colitis.
18. Use according to claim 14, wherein the condition is selected from corneal ulceration, retinopathy and surgical wound healing.
19. Use according to claim 14, wherein the condition is selected from psoriasis, atopic dermatitis, chronic ulcers and epidermolysis bullosa.
20. Use according to claim 14, wherein the condition is selected from periodontitis and gingivitis.
21. Use according to claim 14, wherein the condition is selected from rhinitis, allergic conjunctivitis, eczema and anaphylaxis.
22. Use according to claim 14, wherein the condition is selected from restenosis, congestive heart failure, endometriosis, atherosclerosis and endosclerosis.
23. Use according to claim 14, wherein the condition is selected from pelvic inflammatory disease (PID), age-related macular degeneration and cancer-induced bone resorption.

24. Use according to claim 14, wherein the condition is a lung disease.
25. Use according to claim 24, wherein the condition is selected from cystic fibrosis, adult respiratory distress syndrome (ARDS), emphysema, bronchitis obliterans-organising pneumonia (BOOP), idiopathic pulmonary fibrosis (PIF), diffuse alveolar damage, pulmonary Langerhan's cell granulomatosis, pulmonary lymphangioleiomyomatosis (LAM) and chronic obstructive pulmonary disease (COPD).
