(54) Title: 2,5-DISUBSTITUTED PIPERIDINE OREXIN RECEPTOR ANTAGONISTS

(57) Abstract: The present invention is directed to 2,5-disubstituted piperidine amide compounds which are antagonists of orexin receptors, and which are useful in the treatment or prevention of neurological and psychiatric disorders and diseases in which orexin receptors are involved. The invention is also directed to pharmaceutical compositions comprising these compounds and the use of these compounds and compositions in the prevention or treatment of such diseases in which orexin receptors are involved.

WO 2010/048010 A1

TITLE OF THE INVENTION

2,5-DISUBSTITUTED PIPERIDINE OREXIN RECEPTOR ANTAGONISTS

BACKGROUND OF THE INVENTION

5 The orexins (hypocretins) comprise two neuropeptides produced in the hypothalamus: the orexin A (OX-A) (a 33 amino acid peptide) and the orexin B (OX-B) (a 28 amino acid peptide) (Sakurai T. et al., Cell, 1998, 92, 573-585). Orexins are found to stimulate food consumption in rats suggesting a physiological role for these peptides as mediators in the central feedback mechanism that regulates feeding behaviour (Sakurai T. et al., Cell, 1998, 92, 573-585). Orexins regulate states of sleep and wakefulness opening potentially novel
10 therapeutic approaches for narcoleptic or insomniac patients (Chemelli R.M. et al., Cell, 1999, 98, 437-451). Orexins have also been indicated as playing a role in arousal, reward, learning and memory (Harris, et al., Trends Neurosci., 2006, 29 (10), 571-577). Two orexin receptors have been cloned and characterized in mammals. They belong to the super family of G-protein
15 coupled receptors (Sakurai T. et al., Cell, 1998, 92, 573-585): the orexin-1 receptor (OX or OX1R) is selective for OX-A and the orexin-2 receptor (OX2 or OX2R) is capable to bind OX-A as well as OX-B. The physiological actions in which orexins are presumed to participate are thought to be expressed via one or both of OX1 receptor and OX2 receptor as the two subtypes of orexin receptors.

20 Orexin receptors are found in the mammalian brain and may have numerous implications in pathologies such as depression; anxiety; addictions; obsessive compulsive disorder; affective neurosis; depressive neurosis; anxiety neurosis; dysthymic disorder; behaviour disorder; mood disorder; sexual dysfunction; psychosexual dysfunction; sex disorder; schizophrenia; manic depression; delirium; dementia; severe mental retardation and dyskinesias
25 such as Huntington's disease and Tourette syndrome; eating disorders such as anorexia, bulimia, cachexia, and obesity; addictive feeding behaviors; binge/purge feeding behaviors; cardiovascular diseases; diabetes; appetite/taste disorders; emesis, vomiting, nausea; asthma; cancer; Parkinson's disease; Cushing's syndrome/disease; basophile adenoma; prolactinoma; hyperprolactinemia; hypophysis tumour/adenoma; hypothalamic diseases; inflammatory bowel
30 disease; gastric diskinesia; gastric ulcers; Froehlich's syndrome; adrenohypophysis disease; hypophysis disease; adrenohypophysis hypofunction; adrenohypophysis hyperfunction; hypothalamic hypogonadism; Kallman's syndrome (anosmia, hyposmia); functional or psychogenic amenorrhea; hypopituitarism; hypothalamic hypothyroidism; hypothalamic- adrenal dysfunction; idiopathic hyperprolactinemia; hypothalamic disorders of growth hormone
35 deficiency; idiopathic growth deficiency; dwarfism; gigantism; acromegaly; disturbed biological

and circadian rhythms; sleep disturbances associated with diseases such as neurological disorders, neuropathic pain and restless leg syndrome; heart and lung diseases, acute and congestive heart failure; hypotension; hypertension; urinary retention; osteoporosis; angina pectoris; myocardial infarction; ischemic or haemorrhagic stroke; subarachnoid haemorrhage; ulcers; allergies; benign prostatic hypertrophy; chronic renal failure; renal disease; impaired glucose tolerance; migraine; hyperalgesia; pain; enhanced or exaggerated sensitivity to pain such as hyperalgesia, causalgia, and allodynia; acute pain; burn pain; atypical facial pain; neuropathic pain; back pain; complex regional pain syndrome I and II; arthritic pain; sports injury pain; pain related to infection e.g. HIV, post-chemotherapy pain; post-stroke pain; post-operative pain; neuralgia; emesis, nausea, vomiting; conditions associated with visceral pain such as irritable bowel syndrome, and angina; migraine; urinary bladder incontinence e.g. urge incontinence; tolerance to narcotics or withdrawal from narcotics; sleep disorders; sleep apnea; narcolepsy; insomnia; parasomnia; jet lag syndrome; and neurodegenerative disorders including neurological entities such as disinhibition-dementia-parkinsonism-amyotrophy complex; pallido-ponto-nigral degeneration; epilepsy; seizure disorders and other diseases related to general orexin system dysfunction.

SUMMARY OF THE INVENTION

The present invention is directed to 2,5-disubstituted piperidine amide compounds which are antagonists of orexin receptors, and which are useful in the treatment or prevention of neurological and psychiatric disorders and diseases in which orexin receptors are involved. The invention is also directed to pharmaceutical compositions comprising these compounds and the use of these compounds and compositions in the prevention or treatment of such diseases in which orexin receptors are involved.

DETAILED DESCRIPTION OF THE INVENTION

The present invention is directed to compounds of the formula I:

I

wherein:

A is selected from the group consisting of phenyl, naphthyl and heteroaryl;

B is selected from the group consisting of phenyl, naphthyl, tetrahydroquinolinyl,
5 tetrahydroisoquinolinyl and heteroaryl;

X is $-\text{CH}_2-$, $-\text{CH}_2-\text{O}-$, $-\text{CH}_2-(\text{CO})-$, or $-\text{CH}_2-(\text{CO})-\text{NH}-$, with the proviso that if X is $-\text{CH}_2-\text{O}-$, then B is other than pyridyl;

10 R^{1a} , R^{1b} and R^{1c} may be absent if the valency of A does not permit such substitution and are independently selected from the group consisting of:

- (1) hydrogen,
- (2) halogen,
- (3) hydroxyl,
- 15 (4) $-(\text{C}=\text{O})_m-\text{O}_n-\text{C}_{1-6}\text{alkyl}$, where m is 0 or 1, n is 0 or 1 (wherein if m is 0 or n is 0, a bond is present) and where the alkyl is unsubstituted or substituted with one or more substituents selected from R^{13} ,
- (5) $-(\text{C}=\text{O})_m-\text{O}_n-\text{C}_{3-6}\text{cycloalkyl}$, where the cycloalkyl is unsubstituted or substituted with one or more substituents selected from R^{13} ,
- 20 (6) $-(\text{C}=\text{O})_m-\text{C}_{2-4}\text{alkenyl}$, where the alkenyl is unsubstituted or substituted with one or more substituents selected from R^{13} ,
- (7) $-(\text{C}=\text{O})_m-\text{C}_{2-4}\text{alkynyl}$, where the alkynyl is unsubstituted or substituted with one or more substituents selected from R^{13} ,
- (8) $-(\text{C}=\text{O})_m-\text{O}_n\text{-phenyl}$ or $-(\text{C}=\text{O})_m-\text{O}_n\text{-naphthyl}$, where the phenyl or naphthyl is
25 unsubstituted or substituted with one or more substituents selected from R^{13} ,
- (9) $-(\text{C}=\text{O})_m-\text{O}_n\text{-heterocycle}$, where the heterocycle is unsubstituted or substituted with one or more substituents selected from R^{13} ,
- (10) $-(\text{C}=\text{O})_m-\text{NR}^{10}\text{R}^{11}$, wherein R^{10} and R^{11} are independently selected from the group consisting of:
- 30 (a) hydrogen,
- (b) $\text{C}_{1-6}\text{alkyl}$, which is unsubstituted or substituted with R^{13} ,
- (c) $\text{C}_{3-6}\text{alkenyl}$, which is unsubstituted or substituted with R^{13} ,
- (d) $\text{C}_{3-6}\text{alkynyl}$, which is unsubstituted or substituted with R^{13} ,
- (e) $\text{C}_{3-6}\text{cycloalkyl}$ which is unsubstituted or substituted with R^{13} ,
- 35 (f) phenyl, which is unsubstituted or substituted with R^{13} , and

- (g) heterocycle, which is unsubstituted or substituted with R¹³,
- (11) -S(O)₂-NR¹⁰R¹¹,
- (12) -S(O)_q-R¹², where q is 0, 1 or 2 and where R¹² is selected from the definitions of R¹⁰ and R¹¹,
- 5 (13) -CO₂H,
- (14) -CN, and
- (15) -NO₂;

R^{2a}, R^{2b} and R^{2c} may be absent if the valency of B does not permit such substitution and are
 10 independently selected from the group consisting of:

- (1) hydrogen,
- (2) halogen,
- (3) hydroxyl,
- (4) -(C=O)_m-O_n-C₁₋₆alkyl, where the alkyl is unsubstituted or substituted with one
 15 or more substituents selected from R¹³,
- (5) -(C=O)_m-O_n-C₃₋₆cycloalkyl, where the cycloalkyl is unsubstituted or substituted with one or more substituents selected from R¹³,
- (6) -(C=O)_m-C₂₋₄alkenyl, where the alkenyl is unsubstituted or substituted with one or more substituents selected from R¹³,
- 20 (7) -(C=O)_m-C₂₋₄alkynyl, where the alkynyl is unsubstituted or substituted with one or more substituents selected from R¹³,
- (8) -(C=O)_m-O_n-phenyl or -(C=O)_m-O_n-naphthyl, where the phenyl or naphthyl is unsubstituted or substituted with one or more substituents selected from R¹³,
- (9) -(C=O)_m-O_n-heterocycle, where the heterocycle is unsubstituted or substituted
 25 with one or more substituents selected from R¹³,
- (10) -(C=O)_m-NR¹⁰R¹¹,
- (11) -S(O)₂-NR¹⁰R¹¹,
- (12) -S(O)_q-R¹²,
- (13) -CO₂H,
- 30 (14) -CN, and
- (15) -NO₂;

R³ is C₁₋₆alkyl or C₃₋₆cycloalkyl, which is unsubstituted or substituted with one or more substituents selected from R¹³;

R¹³ is selected from the group consisting of:

- (1) halogen,
- (2) hydroxyl,
- 5 (3) $-(C=O)_m-O_n-C_{1-6}$ alkyl, where the alkyl is unsubstituted or substituted with one or more substituents selected from R¹⁴,
- (4) $-O_n-(C_{1-3})$ perfluoroalkyl,
- (5) $-(C=O)_m-O_n-C_{3-6}$ cycloalkyl, where the cycloalkyl is unsubstituted or substituted with one or more substituents selected from R¹⁴,
- 10 (6) $-(C=O)_m-C_{2-4}$ alkenyl, where the alkenyl is unsubstituted or substituted with one or more substituents selected from R¹⁴,
- (7) $-(C=O)_m-C_{2-4}$ alkynyl, where the alkynyl is unsubstituted or substituted with one or more substituents selected from R¹⁴,
- (8) $-(C=O)_m-O_n$ -phenyl or $-(C=O)_m-O_n$ -naphthyl, where the phenyl or naphthyl is
- 15 unsubstituted or substituted with one or more substituents selected from R¹⁴,
- (9) $-(C=O)_m-O_n$ -heterocycle, where the heterocycle is unsubstituted or substituted with one or more substituents selected from R¹⁴,
- (10) $-(C=O)_m-NR^{10}R^{11}$,
- (11) $-S(O)_2-NR^{10}R^{11}$,
- 20 (12) $-S(O)_q-R^{12}$,
- (13) $-CO_2H$,
- (14) $-CN$, and
- (15) $-NO_2$;

25 R¹⁴ is selected from the group consisting of:

- (1) hydroxyl,
- (2) halogen,
- (3) C_{1-6} alkyl,
- (4) $-C_{3-6}$ cycloalkyl,
- 30 (5) $-O-C_{1-6}$ alkyl,
- (6) $-O(C=O)-C_{1-6}$ alkyl,
- (7) $-NH-C_{1-6}$ alkyl,
- (8) phenyl,
- (9) heterocycle,
- 35 (10) $-CO_2H$, and

(11) -CN;
or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula II:

II

wherein A, B, R¹ᵃ, R¹ᵇ, R¹ᶜ, R²ᵃ, R²ᵇ, R²ᶜ and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula IIa:

IIa

wherein B, R¹ᵃ, R¹ᵇ, R¹ᶜ, R²ᵃ, R²ᵇ, R²ᶜ and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula IIa':

IIa'

wherein B, R^{1a}, R^{1b}, R^{1c}, R^{2a}, R^{2b}, R^{2c} and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula IIa':

5

IIa''

wherein B, R^{1a}, R^{1b}, R^{1c}, R^{2a}, R^{2b}, R^{2c} and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula IIb:

10

IIb

wherein B, R^{1a}, R^{1b}, R^{2a}, R^{2b}, R^{2c} and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula IIb':

IIb'

wherein B, R^{1a}, R^{1b}, R^{2a}, R^{2b}, R^{2c} and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

5 An embodiment of the present invention includes compounds of the formula IIb'':

IIb''

wherein B, R^{1a}, R^{1b}, R^{2a}, R^{2b}, R^{2c} and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

10 An embodiment of the present invention includes compounds of the formula IIc:

IIc

wherein B, R^{1a}, R^{1b}, R^{2a}, R^{2b}, R^{2c} and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula IIb':

IIb'

wherein B, R^{1a}, R^{1b}, R^{2a}, R^{2b}, R^{2c} and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula IIb'':

IIb''

wherein B, R^{1a}, R^{1b}, R^{2a}, R^{2b}, R^{2c} and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula III:

III

wherein A, B, R1a, R1b, R1c, R2a, R2b, R2c and R3 are defined herein; or a pharmaceutically acceptable salt thereof.

5 An embodiment of the present invention includes compounds of the formula IIIa:

IIIa

wherein B, R1a, R1b, R1c, R2a, R2b, R2c and R3 are defined herein; or a pharmaceutically acceptable salt thereof.

10 An embodiment of the present invention includes compounds of the formula IIIa':

IIIa'

wherein B, R1a, R1b, R1c, R2a, R2b, R2c and R3 are defined herein; or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula

IIIa":

IIIa"

- 5 wherein B, R^{1a}, R^{1b}, R^{1c}, R^{2a}, R^{2b}, R^{2c} and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula IIIb:

IIIb

- 10 wherein B, R^{1a}, R^{1b}, R^{2a}, R^{2b}, R^{2c} and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula IIIb':

IIIb'

wherein B, R^{1a}, R^{1b}, R^{2a}, R^{2b}, R^{2c} and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

An embodiment of the present invention includes compounds of the formula

5 IIIb":

IIIb"

wherein B, R^{1a}, R^{1b}, R^{2a}, R^{2b}, R^{2c} and R³ are defined herein; or a pharmaceutically acceptable salt thereof.

10 An embodiment of the present invention includes compounds wherein A is selected from the group consisting of: phenyl, pyrazolyl, and thiazolyl. An embodiment of the present invention includes compounds wherein A is phenyl. An embodiment of the present invention includes compounds wherein A is heteroaryl. An embodiment of the present invention includes compounds wherein A is pyrazolyl. An embodiment of the present invention includes
15 compounds wherein A is thiazolyl.

An embodiment of the present invention includes compounds wherein B is independently selected from the group consisting of:

- (1) phenyl,
- (2) quinoline,
- 20 (3) isoquinoline,
- (4) tetrahydroquinoline,
- (5) tetrahydroisoquinoline,
- (6) benzoxazole,
- (7) thienopyridine,
- 25 (8) pyridine,
- (9) furan,
- (10) naphthyridine,
- (11) benzothiazole, and

(12) pyrimidine;

with the proviso that if X is -CH₂-O-, then B is other than pyridine.

An embodiment of the present invention includes compounds wherein B is phenyl. An embodiment of the present invention includes compounds wherein B is quinoline.

5 An embodiment of the present invention includes compounds wherein B is isoquinoline. An embodiment of the present invention includes compounds wherein B is pyridine, with the proviso that if X is -CH₂-O-, then B is other than pyridine. An embodiment of the present invention includes compounds wherein B is tetrahydroquinoline. An embodiment of the present invention includes compounds wherein B is tetrahydroisoquinoline.

10 An embodiment of the present invention includes compounds wherein X is -CH₂-. An embodiment of the present invention includes compounds wherein X is -CH₂-O-, with the proviso that if X is -CH₂-O-, then B is other than pyridyl. An embodiment of the present invention includes compounds wherein X is -CH₂-(CO)-. An embodiment of the present invention includes compounds wherein X is -CH₂-(CO)-NH-,

15 An embodiment of the present invention includes compounds wherein R^{1a}, R^{1b} and R^{1c} are independently selected from the group consisting of:

- (1) hydrogen,
- (2) halogen,
- (3) hydroxyl,
- 20 (4) C₁-6alkyl, which is unsubstituted or substituted with halogen, hydroxyl, phenyl or naphthyl,
- (5) -O-C₁-6alkyl, which is unsubstituted or substituted with halogen, hydroxyl or phenyl,
- (6) heteroaryl, wherein heteroaryl is selected from triazolyl, oxazolyl, pyrrolyl,
- 25 imidazolyl, indolyl, pyridyl, and pyrimidinyl, which is unsubstituted or substituted with halogen, hydroxyl, C₁-6alkyl, -O-C₁-6alkyl or-NO₂,
- (7) phenyl, which is unsubstituted or substituted with halogen, hydroxyl, C₁-6alkyl, -O-C₁-6alkyl or-NO₂,
- (8) -O-phenyl, which is unsubstituted or substituted with halogen, hydroxyl, C₁-
- 30 6alkyl, -O-C₁-6alkyl or-NO₂, and
- (9) -NH-C₁-6alkyl, or -N(C₁-6alkyl)(C₁-6alkyl), which is unsubstituted or substituted with halogen, hydroxyl, C₁-6alkyl, -O-C₁-6alkyl or-NO₂.

An embodiment of the present invention includes compounds wherein R^{1a}, R^{1b} and R^{1c} are independently selected from the group consisting of:

- 35 (1) hydrogen,

- (2) halogen,
- (3) hydroxyl,
- (4) C₁₋₆alkyl, which is unsubstituted or substituted with halogen, hydroxyl or phenyl or naphthyl,
- 5 (5) -O-C₁₋₆alkyl, which is unsubstituted or substituted with halogen, hydroxyl or phenyl,
- (6) heteroaryl, wherein heteroaryl is selected from triazolyl, oxazolyl and pyrimidinyl, which is unsubstituted or substituted with halogen, hydroxyl or C₁₋₆alkyl, and
- 10 (7) phenyl, which is unsubstituted or substituted with halogen, hydroxyl or C₁₋₆alkyl.

An embodiment of the present invention includes compounds wherein R^{1a}, R^{1b} and R^{1c} are independently selected from the group consisting of:

- (1) hydrogen,
- 15 (2) halogen,
- (3) C₁₋₆alkyl,
- (4) triazolyl,
- (5) oxazolyl,
- (6) pyrimidinyl, and
- 20 (7) phenyl.

An embodiment of the present invention includes compounds wherein R^{1c} is hydrogen and R^{1a} and R^{1b} are independently selected from the group consisting of:

- (1) hydrogen,
- (2) chloro,
- 25 (3) fluororo,
- (4) methyl,
- (5) triazolyl,
- (6) oxazolyl,
- (7) pyrimidinyl, and
- 30 (8) phenyl.

An embodiment of the present invention includes compounds wherein R^{1c} is hydrogen, R^{1b} is hydrogen or methyl, and R^{1a} is selected from the group consisting of:

- (1) hydrogen,
- (2) chloro,
- 35 (3) fluororo,

- (4) methyl,
- (5) triazolyl,
- (6) oxazolyl,
- (7) pyrimidinyl, and
- 5 (8) phenyl.

An embodiment of the present invention includes compounds wherein R^{1c} is hydrogen, R^{1b} is hydrogen or methyl, and R^{1a} is triazolyl. An embodiment of the present invention includes compounds wherein R^{1c} is hydrogen, R^{1b} is hydrogen or methyl, and R^{1a} is 2-(1,2,3-triazolyl).

10 An embodiment of the present invention includes compounds wherein R^{2a}, R^{2b} and R^{2c} are independently selected from the group consisting of:

- (1) hydrogen,
- (2) halogen,
- (3) hydroxyl,
- 15 (4) C₁-6alkyl, which is unsubstituted or substituted with halogen, hydroxyl or phenyl or naphthyl,
- (5) -O-C₁-6alkyl, which is unsubstituted or substituted with halogen, hydroxyl or phenyl,
- (6) heteroaryl, wherein heteroaryl is selected from pyrrolyl, imidazolyl, indolyl,
- 20 pyridyl, and pyrimidinyl, which is unsubstituted or substituted with halogen, hydroxyl, C₁-6alkyl, -O-C₁-6alkyl or-NO₂,
- (7) phenyl, which is unsubstituted or substituted with halogen, hydroxyl, C₁-6alkyl, -O-C₁-6alkyl or-NO₂,
- (8) -O-phenyl, which is unsubstituted or substituted with halogen, hydroxyl, C₁-
- 25 6alkyl, -O-C₁-6alkyl or-NO₂, and
- (9) -NH-C₁-6alkyl, or -N(C₁-6alkyl)(C₁-6alkyl), which is unsubstituted or substituted with halogen, hydroxyl, C₁-6alkyl, -O-C₁-6alkyl or-NO₂.

An embodiment of the present invention includes compounds wherein R^{2a}, R^{2b} and R^{2c} are independently selected from the group consisting of:

- 30 (1) hydrogen,
- (2) halogen,
- (3) hydroxyl,
- (4) C₁-6alkyl, which is unsubstituted or substituted with halogen, hydroxyl or phenyl,

- (5) -O-C₁₋₆alkyl, which is unsubstituted or substituted with halogen, hydroxyl or phenyl, and
- (6) -NH-C₁₋₆alkyl, or -N(C₁₋₆alkyl)(C₁₋₆alkyl), which is unsubstituted or substituted with halogen.

5 An embodiment of the present invention includes compounds wherein R^{2a}, R^{2b} and R^{2c} are independently selected from the group consisting of:

- (1) hydrogen,
- (2) halogen,
- (3) C₁₋₆alkyl, which is unsubstituted or substituted with halogen,
- 10 (4) -O-C₁₋₆alkyl, which is unsubstituted or substituted with halogen, and
- (5) -NH-C₁₋₆alkyl, or -N(C₁₋₆alkyl)(C₁₋₆alkyl), which is unsubstituted or substituted with halogen.

An embodiment of the present invention includes compounds wherein R^{2c} is hydrogen, and R^{2a} and R^{2b} are independently selected from the group consisting of:

- 15 (1) hydrogen,
- (2) chloro,
- (3) fluoro,
- (4) bromo,
- (5) methoxy,
- 20 (6) t-butoxy,
- (7) difluoromethyl, and
- (8) trifluoromethyl.

An embodiment of the present invention includes compounds wherein R^{2c} is hydrogen, and R^{2a} and R^{2b} are independently selected from the group consisting of:

- 25 (1) hydrogen,
- (2) fluoro, and
- (3) trifluoromethyl.

30 An embodiment of the present invention includes compounds wherein R³ is C₁₋₆alkyl or C₃₋₆cycloalkyl. An embodiment of the present invention includes compounds wherein R³ is C₁₋₆alkyl. An embodiment of the present invention includes compounds wherein R³ is C₃₋₆cycloalkyl. An embodiment of the present invention includes compounds wherein R³ is methyl or ethyl. An embodiment of the present invention includes compounds wherein R³ is methyl. An embodiment of the present invention includes compounds wherein R³ is in the trans configuration on the piperidine ring relative to the substituent at the 5-position. An embodiment

of the present invention includes compounds wherein R³ is in the cis configuration on the piperidine ring relative to the substituent at the 5-position. An embodiment of the present invention includes compounds wherein R³ is in the R configuration on the piperidine ring. An embodiment of the present invention includes compounds wherein the substituent at the 2-position of the piperidine ring is in the R configuration. An embodiment of the present invention includes compounds wherein the substituent at the 5-position of the piperidine ring is in the R configuration.

Specific embodiments of the present invention include a compound which is selected from the group consisting of the subject compounds of the Examples herein or a pharmaceutically acceptable salt thereof.

The compounds of the present invention may contain one or more asymmetric centers and can thus occur as "stereoisomers" including racemates and racemic mixtures, enantiomeric mixtures, single enantiomers, diastereomeric mixtures and individual diastereomers. Additional asymmetric centers may be present depending upon the nature of the various substituents on the molecule. Each such asymmetric center will independently produce two optical isomers and it is intended that all of the possible optical isomers and diastereomers in mixtures and as pure or partially purified compounds are included within the scope of this invention. The present invention is meant to comprehend all such isomeric forms of these compounds. When bonds to the chiral carbon are depicted as straight lines in the Formulas of the invention, it is understood that both the (R) and (S) configurations of the chiral carbon, and hence both enantiomers and mixtures thereof, are embraced within the Formula. For example, Formula I shows the structure of the class of compounds without specific stereochemistry. When the compounds of the present invention contain one chiral center, the term "stereoisomer" includes both enantiomers and mixtures of enantiomers, such as the specific 50:50 mixture referred to as a racemic mixtures.

The independent syntheses of these diastereomers or their chromatographic separations may be achieved as known in the art by appropriate modification of the methodology disclosed herein. Their absolute stereochemistry may be determined by the x-ray crystallography of crystalline products or crystalline intermediates which are derivatized, if necessary, with a reagent containing an asymmetric center of known absolute configuration. If desired, racemic mixtures of the compounds may be separated so that the individual enantiomers are isolated. The separation can be carried out by methods well known in the art, such as the coupling of a racemic mixture of compounds to an enantiomerically pure compound to form a diastereomeric mixture, followed by separation of the individual diastereomers by standard

methods, such as fractional crystallization or chromatography. The coupling reaction is often the formation of salts using an enantiomerically pure acid or base. The diastomeric derivatives may then be converted to the pure enantiomers by cleavage of the added chiral residue. The racemic mixture of the compounds can also be separated directly by chromatographic methods utilizing chiral stationary phases, which methods are well known in the art. Alternatively, any enantiomer of a compound may be obtained by stereoselective synthesis using optically pure starting materials or reagents of known configuration by methods well known in the art.

As appreciated by those of skill in the art, halogen or halo as used herein are intended to include fluoro, chloro, bromo and iodo. Similarly, C₁₋₆, as in C₁₋₆alkyl is defined

to identify the group as having 1, 2, 3, 4, 5 or 6 carbons in a linear or branched arrangement, such that C₁₋₆alkyl specifically includes methyl, ethyl, n-propyl, iso-propyl, n-butyl, iso-butyl, tert-butyl, pentyl, and hexyl. A group which is designated as being independently substituted with substituents may be independently substituted with multiple numbers of such substituents. The term "heterocycle" as used herein includes both unsaturated and saturated heterocyclic moieties, wherein the unsaturated heterocyclic moieties (i.e. "heteroaryl") include benzoimidazolyl, benzimidazolonyl, benzofuranyl, benzofurazanyl, benzopyrazolyl, benzothiazolyl, benzotriazolyl, benzothiophenyl, benzoxazepin, benzoxazolyl, carbazolyl, carbolinyl, cinnoliny, furanyl, imidazolyl, indoliny, indolyl, indolaziny, indazolyl, isobenzofuranyl, isoindolyl, isoquinolyl, isothiazolyl, isoxazolyl, naphthpyridinyl, oxadiazolyl, oxazolyl, oxazoline, isoxazoline, oxetanyl, pyrazinyl, pyrazolyl, pyridazinyl, pyridopyridinyl, pyridazinyl, pyridyl, pyrimidyl, pyrrolyl, quinazolinyl, quinolyl, quinoxaliny, tetrazolyl, tetrazolopyridyl, thiadiazolyl, thiazolyl, thienyl, triazolyl, and N-oxides thereof, and wherein the saturated heterocyclic moieties include azetidiny, 1,4-dioxanyl, hexahydroazepinyl, piperazinyl, piperidinyl, pyridin-2-onyl, pyrrolidinyl, morpholinyl, tetrahydrofuranyl, thiomorpholinyl, and tetrahydrothienyl, and N-oxides thereof.

The term "pharmaceutically acceptable salts" refers to salts prepared from pharmaceutically acceptable non-toxic bases or acids including inorganic or organic bases and inorganic or organic acids. Salts derived from inorganic bases include aluminum, ammonium, calcium, copper, ferric, ferrous, lithium, magnesium, manganic salts, manganous, potassium, sodium, zinc, and the like. Particular embodiments include the ammonium, calcium, magnesium, potassium, and sodium salts. Salts in the solid form may exist in more than one crystal structure, and may also be in the form of hydrates. Salts derived from pharmaceutically acceptable organic non-toxic bases include salts of primary, secondary, and tertiary amines, substituted amines including naturally occurring substituted amines, cyclic amines, and basic ion exchange resins, such as arginine, betaine, caffeine, choline, N,N'-dibenzylethylene-diamine,

diethylamine, 2-diethylaminoethanol, 2-dimethylaminoethanol, ethanolamine, ethylenediamine, N-ethyl-morpholine, N-ethylpiperidine, glucamine, glucosamine, histidine, hydrabamine, isopropylamine, lysine, methylglucamine, morpholine, piperazine, piperidine, polyamine resins, procaine, purines, theobromine, triethylamine, trimethylamine, tripropylamine, tromethamine, and the like.

When the compound of the present invention is basic, salts may be prepared from pharmaceutically acceptable non-toxic acids, including inorganic and organic acids. Such acids include acetic, benzenesulfonic, benzoic, camphorsulfonic, citric, ethanesulfonic, fumaric, gluconic, glutamic, hydrobromic, hydrochloric, isethionic, lactic, maleic, malic, mandelic, methanesulfonic, mucic, nitric, pantoic, pantothenic, phosphoric, succinic, sulfuric, tartaric, p-toluenesulfonic acid, and the like. Particular embodiments include the citric, hydrobromic, hydrochloric, maleic, phosphoric, sulfuric, fumaric, and tartaric acids. It will be understood that, as used herein, references to the compounds of Formula I are meant to also include the pharmaceutically acceptable salts.

Exemplifying the invention is the use of the compounds disclosed in the Examples and herein. Specific compounds within the present invention include a compound which selected from the group consisting of the compounds disclosed in the following Examples and pharmaceutically acceptable salts thereof and individual enantiomers or diastereomers thereof.

The subject compounds are useful in a method of antagonizing orexin receptor activity in a patient such as a mammal in need of such inhibition comprising the administration of an effective amount of the compound. The present invention is directed to the use of the compounds disclosed herein as antagonists of orexin receptor activity. In addition to primates, especially humans, a variety of other mammals can be treated according to the method of the present invention. The present invention is directed to a compound of the present invention or a pharmaceutically acceptable salt thereof for use in medicine. The present invention is further directed to a use of a compound of the present invention or a pharmaceutically acceptable salt thereof for the manufacture of a medicament for antagonizing orexin receptor activity or treating the disorders and diseases noted herein in humans and animals.

The subject treated in the present methods is generally a mammal, such as a human being, male or female. The term "therapeutically effective amount" means the amount of the subject compound that will elicit the biological or medical response of a tissue, system, animal or human that is being sought by the researcher, veterinarian, medical doctor or other clinician. It is recognized that one skilled in the art may affect the neurological and psychiatric disorders by treating a patient presently afflicted with the disorders or by prophylactically

treating a patient afflicted with the disorders with an effective amount of the compound of the present invention. As used herein, the terms "treatment" and "treating" refer to all processes wherein there may be a slowing, interrupting, arresting, controlling, or stopping of the progression of the neurological and psychiatric disorders described herein, but does not necessarily indicate a total elimination of all disorder symptoms, as well as the prophylactic therapy of the mentioned conditions, particularly in a patient who is predisposed to such disease or disorder. The terms "administration of" and or "administering a" compound should be understood to mean providing a compound of the invention or a prodrug of a compound of the invention to the individual in need thereof.

The term "composition" as used herein is intended to encompass a product comprising the specified ingredients in the specified amounts, as well as any product which results, directly or indirectly, from combination of the specified ingredients in the specified amounts. Such term in relation to pharmaceutical composition, is intended to encompass a product comprising the active ingredient(s), and the inert ingredient(s) that make up the carrier, as well as any product which results, directly or indirectly, from combination, complexation or aggregation of any two or more of the ingredients, or from dissociation of one or more of the ingredients, or from other types of reactions or interactions of one or more of the ingredients. Accordingly, the pharmaceutical compositions of the present invention encompass any composition made by admixing a compound of the present invention and a pharmaceutically acceptable carrier. By "pharmaceutically acceptable" it is meant the carrier, diluent or excipient must be compatible with the other ingredients of the formulation and not deleterious to the recipient thereof.

The utility of the compounds in accordance with the present invention as orexin receptor OX1R and/or OX2R antagonists may be readily determined without undue experimentation by methodology well known in the art, including the "FLIPR Ca^{2+} Flux Assay" (Okumura et al., Biochem. Biophys. Res. Comm. 280:976-981, 2001). In a typical experiment the OX1 and OX2 receptor antagonistic activity of the compounds of the present invention was determined in accordance with the following experimental method. For intracellular calcium measurements, Chinese hamster ovary (CHO) cells expressing the rat OX1 receptor or the human OX2 receptor, are grown in Iscove's modified DMEM containing 2 mM L-glutamine, 0.5 g/ml G418, 1% hypoxanthine-thymidine supplement, 100 U/ml penicillin, 100 ug/ml streptomycin and 10 % heat-inactivated fetal calf serum (FCS). The cells are seeded at 20,000 cells / well into Becton-Dickinson black 384-well clear bottom sterile plates coated with poly-D-lysine. All reagents were from GIBCO-Invitrogen Corp. The seeded plates are incubated overnight at 37°C and 5% CO_2 . Ala-6,12 human orexin-A as the agonist is prepared as a 1 mM

stock solution in 1% bovine serum albumin (BSA) and diluted in assay buffer (HBSS containing 20 mM HEPES, 0.1% BSA and 2.5mM probenecid, pH7.4) for use in the assay at a final concentration of 70pM. Test compounds are prepared as 10 mM stock solution in DMSO, then diluted in 384-well plates, first in DMSO, then assay buffer. On the day of the assay, cells are washed 3 times with 100 ul assay buffer and then incubated for 60 min (37° C, 5% CO₂) in 60 ul assay buffer containing 1 uM Fluo-4AM ester, 0.02 % pluronic acid, and 1 % BSA. The dye loading solution is then aspirated and cells are washed 3 times with 100 ul assay buffer. 30 ul of that same buffer is left in each well. Within the Fluorescent Imaging Plate Reader (FLIPR, Molecular Devices), test compounds are added to the plate in a volume of 25 ul, incubated for 5 min and finally 25 ul of agonist is added. Fluorescence is measured for each well at 1 second intervals for 5 minutes and the height of each fluorescence peak is compared to the height of the fluorescence peak induced by 70 pM Ala-6,12 orexin-A with buffer in place of antagonist. For each antagonist, IC₅₀ value (the concentration of compound needed to inhibit 50 % of the agonist response) is determined. Alternatively, compound potency can be assessed by a radioligand binding assay (described in Bergman et. al. Bioorg. Med. Chem. Lett. 2008, 18, 1425 - 1430) in which the inhibition constant (K_i) is determined in membranes prepared from CHO cells expressing either the orexin-1 (OX1) or orexin-2 (OX2) receptor. The intrinsic orexin receptor antagonist activity of a compound which may be used in the present invention may be determined by these assays.

In particular, the compounds of the following examples had activity in antagonizing the rat orexin-1 (OX1) receptor and/or the human orexin-2 (OX2) receptor in the aforementioned assays, generally with an IC₅₀ of less than about 50 μM. Many of compounds within the present invention had activity in antagonizing the rat orexin-1 (OX1) receptor and/or the human orexin-2 (OX2) receptor in the aforementioned assays with an IC₅₀ of less than about 100 nM. Compounds of the present invention also have activity in the radioligand binding assay, generally with a K_i < 100 nM against the orexin-1 (OX1) and/or the orexin-2 (OX2) receptor. Additional data is provided herein. Such a result is indicative of the intrinsic activity of the compounds in use as antagonists of orexin-1 (OX1) receptor and/or the orexin-2 (OX2) receptor. The present invention also includes compounds within the generic scope of the invention which possess activity as agonists of the orexin-1 (OX1) receptor and/or the orexin-2 (OX2) receptor. With respect to other piperidine compounds, the present compounds exhibit unexpected properties, such as with respect to increased potency, oral bioavailability, metabolic stability, and/or selectivity. For example, relative to compounds which possess an unsubstituted piperidine ring, the present compounds wherein R³ is substituted such as with a C₁₋₆ alkyl or

C3-6 cycloalkyl possess unexpectedly greater potency at the orexin-1 (OX1) receptor and/or the orexin-2 (OX2) receptor.

The orexin receptors have been implicated in a wide range of biological functions. This has suggested a potential role for these receptors in a variety of disease processes in humans or other species. The compounds of the present invention have utility in treating, preventing, ameliorating, controlling or reducing the risk of a variety of neurological and psychiatric disorders associated with orexin receptors, including one or more of the following conditions or diseases: sleep disorders, sleep disturbances, including enhancing sleep quality, improving sleep quality, increasing sleep efficiency, augmenting sleep maintenance; increasing the value which is calculated from the time that a subject sleeps divided by the time that a subject is attempting to sleep; improving sleep initiation; decreasing sleep latency or onset (the time it takes to fall asleep); decreasing difficulties in falling asleep; increasing sleep continuity; decreasing the number of awakenings during sleep; decreasing intermittent wakings during sleep; decreasing nocturnal arousals; decreasing the time spent awake following the initial onset of sleep; increasing the total amount of sleep; reducing the fragmentation of sleep; altering the timing, frequency or duration of REM sleep bouts; altering the timing, frequency or duration of slow wave (i.e. stages 3 or 4) sleep bouts; increasing the amount and percentage of stage 2 sleep; promoting slow wave sleep; enhancing EEG-delta activity during sleep; decreasing nocturnal arousals, especially early morning awakenings; increasing daytime alertness; reducing daytime drowsiness; treating or reducing excessive daytime sleepiness; increasing satisfaction with the intensity of sleep; increasing sleep maintenance; idiopathic insomnia; sleep problems; insomnia, hypersomnia, idiopathic hypersomnia, repeatability hypersomnia, intrinsic hypersomnia, narcolepsy, interrupted sleep, sleep apnea, wakefulness, nocturnal myoclonus, REM sleep interruptions, jet-lag, shift workers' sleep disturbances, dyssomnias, night terror, insomnias associated with depression, emotional/mood disorders, Alzheimer's disease or cognitive impairment, as well as sleep walking and enuresis, and sleep disorders which accompany aging; Alzheimer's sundowning; conditions associated with circadian rhythmicity as well as mental and physical disorders associated with travel across time zones and with rotating shift-work schedules, conditions due to drugs which cause reductions in REM sleep as a side effect; fibromyalgia; syndromes which are manifested by non-restorative sleep and muscle pain or sleep apnea which is associated with respiratory disturbances during sleep; conditions which result from a diminished quality of sleep; increasing learning; augmenting memory; increasing retention of memory; eating disorders associated with excessive food intake and complications associated therewith, compulsive eating disorders, obesity (due to

any cause, whether genetic or environmental), obesity-related disorders including overeating and bulimia nervosa, hypertension, diabetes, elevated plasma insulin concentrations and insulin resistance, dyslipidemias, hyperlipidemia, endometrial, breast, prostate and colon cancer, osteoarthritis, obstructive sleep apnea, cholelithiasis, gallstones, heart disease, abnormal heart rhythms and arrhythmias, myocardial infarction, congestive heart failure, coronary heart disease, sudden death, stroke, polycystic ovary disease, craniopharyngioma, the Prader-Willi Syndrome, Frohlich's syndrome, GH-deficient subjects, normal variant short stature, Turner's syndrome, and other pathological conditions showing reduced metabolic activity or a decrease in resting energy expenditure as a percentage of total fat-free mass, e.g, children with acute lymphoblastic leukemia, metabolic syndrome, also known as syndrome X, insulin resistance syndrome, reproductive hormone abnormalities, sexual and reproductive dysfunction, such as impaired fertility, infertility, hypogonadism in males and hirsutism in females, fetal defects associated with maternal obesity, gastrointestinal motility disorders, such as obesity-related gastro-esophageal reflux, respiratory disorders, such as obesity-hypoventilation syndrome (Pickwickian syndrome), breathlessness, cardiovascular disorders, inflammation, such as systemic inflammation of the vasculature, arteriosclerosis, hypercholesterolemia, hyperuricaemia, lower back pain, gallbladder disease, gout, kidney cancer, increased anesthetic risk, reducing the risk of secondary outcomes of obesity, such as reducing the risk of left ventricular hypertrophy; diseases or disorders where abnormal oscillatory activity occurs in the brain, including depression, migraine, neuropathic pain, Parkinson's disease, psychosis and schizophrenia, as well as diseases or disorders where there is abnormal coupling of activity, particularly through the thalamus; enhancing cognitive function; enhancing memory; increasing memory retention; increasing immune response; increasing immune function; hot flashes; night sweats; extending life span; schizophrenia; muscle-related disorders that are controlled by the excitation/relaxation rhythms imposed by the neural system such as cardiac rhythm and other disorders of the cardiovascular system; conditions related to proliferation of cells such as vasodilation or vasoconstriction and blood pressure; cancer; cardiac arrhythmia; hypertension; congestive heart failure; conditions of the genital/urinary system; disorders of sexual function and fertility; adequacy of renal function; responsiveness to anesthetics; mood disorders, such as depression or more particularly depressive disorders, for example, single episodic or recurrent major depressive disorders and dysthymic disorders, or bipolar disorders, for example, bipolar I disorder, bipolar II disorder and cyclothymic disorder, mood disorders due to a general medical condition, and substance-induced mood disorders; anxiety disorders including acute stress disorder, agoraphobia, generalized anxiety disorder, obsessive-compulsive disorder, panic attack, panic disorder, post-traumatic stress disorder, separation anxiety disorder, social phobia, specific

phobia, substance-induced anxiety disorder and anxiety due to a general medical condition; acute neurological and psychiatric disorders such as cerebral deficits subsequent to cardiac bypass surgery and grafting, stroke, ischemic stroke, cerebral ischemia, spinal cord trauma, head trauma, perinatal hypoxia, cardiac arrest, hypoglycemic neuronal damage; Huntington's Chorea; amyotrophic lateral sclerosis; multiple sclerosis; ocular damage; retinopathy; cognitive disorders; idiopathic and drug-induced Parkinson's disease; muscular spasms and disorders associated with muscular spasticity including tremors, epilepsy, convulsions; cognitive disorders including dementia (associated with Alzheimer's disease, ischemia, trauma, vascular problems or stroke, HIV disease, Parkinson's disease, Huntington's disease, Pick's disease, Creutzfeldt-Jacob disease, perinatal hypoxia, other general medical conditions or substance abuse); delirium, amnesic disorders or age related cognitive decline; schizophrenia or psychosis including schizophrenia (paranoid, disorganized, catatonic or undifferentiated), schizophreniform disorder, schizoaffective disorder, delusional disorder, brief psychotic disorder, shared psychotic disorder, psychotic disorder due to a general medical condition and substance-induced psychotic disorder; substance-related disorders and addictive behaviors (including substance-induced delirium, persisting dementia, persisting amnesic disorder, psychotic disorder or anxiety disorder; tolerance, addictive feeding, dependence or withdrawal from substances including alcohol, amphetamines, cannabis, cocaine, hallucinogens, inhalants, nicotine, opioids, phencyclidine, sedatives, hypnotics or anxiolytics); movement disorders, including akinesias and akinetic-rigid syndromes (including Parkinson's disease, drug-induced parkinsonism, postencephalitic parkinsonism, progressive supranuclear palsy, multiple system atrophy, corticobasal degeneration, parkinsonism-ALS dementia complex and basal ganglia calcification), chronic fatigue syndrome, fatigue, including Parkinson's fatigue, multiple sclerosis fatigue, fatigue caused by a sleep disorder or a circadian rhythm disorder, medication-induced parkinsonism (such as neuroleptic-induced parkinsonism, neuroleptic malignant syndrome, neuroleptic-induced acute dystonia, neuroleptic-induced acute akathisia, neuroleptic-induced tardive dyskinesia and medication-induced postural tremor), Gilles de la Tourette's syndrome, epilepsy, and dyskinesias [including tremor (such as rest tremor, essential tremor, postural tremor and intention tremor), chorea (such as Sydenham's chorea, Huntington's disease, benign hereditary chorea, neuroacanthocytosis, symptomatic chorea, drug-induced chorea and hemiballism), myoclonus (including generalised myoclonus and focal myoclonus), tics (including simple tics, complex tics and symptomatic tics), restless leg syndrome and dystonia (including generalised dystonia such as idiopathic dystonia, drug-induced dystonia, symptomatic dystonia and paroxymal dystonia, and focal dystonia such as blepharospasm, oromandibular dystonia, spasmodic dysphonia, spasmodic torticollis, axial dystonia, dystonic writer's cramp and

hemiplegic dystonia); attention deficit/hyperactivity disorder (ADHD); conduct disorder; migraine (including migraine headache); urinary incontinence; substance tolerance, substance withdrawal (including, substances such as opiates, nicotine, tobacco products, alcohol, benzodiazepines, cocaine, sedatives, hypnotics, etc.); psychosis; schizophrenia; anxiety (including generalized anxiety disorder, panic disorder, and obsessive compulsive disorder); mood disorders (including depression, mania, bipolar disorders); trigeminal neuralgia; hearing loss; tinnitus; neuronal damage including ocular damage; retinopathy; macular degeneration of the eye; emesis; brain edema; pain, including acute and chronic pain states, severe pain, intractable pain, inflammatory pain, neuropathic pain, post-traumatic pain, bone and joint pain (osteoarthritis), repetitive motion pain, dental pain, cancer pain, myofascial pain (muscular injury, fibromyalgia), perioperative pain (general surgery, gynecological), chronic pain, neuropathic pain, post-traumatic pain, trigeminal neuralgia, migraine and migraine headache.

Thus, in specific embodiments the present invention provides methods for: enhancing the quality of sleep; augmenting sleep maintenance; increasing REM sleep; increasing stage 2 sleep; decreasing fragmentation of sleep patterns; treating insomnia; enhancing cognition; increasing memory retention; treating or controlling obesity; treating or controlling depression; treating, controlling, ameliorating or reducing the risk of epilepsy, including absence epilepsy; treating or controlling pain, including neuropathic pain; treating or controlling Parkinson's disease; treating or controlling psychosis; or treating, controlling, ameliorating or reducing the risk of schizophrenia, in a mammalian patient in need thereof which comprises administering to the patient a therapeutically effective amount of a compound of the present invention.

The subject compounds are further useful in a method for the prevention, treatment, control, amelioration, or reduction of risk of the diseases, disorders and conditions noted herein. The dosage of active ingredient in the compositions of this invention may be varied, however, it is necessary that the amount of the active ingredient be such that a suitable dosage form is obtained. The active ingredient may be administered to patients (animals and human) in need of such treatment in dosages that will provide optimal pharmaceutical efficacy. The selected dosage depends upon the desired therapeutic effect, on the route of administration, and on the duration of the treatment. The dose will vary from patient to patient depending upon the nature and severity of disease, the patient's weight, special diets then being followed by a patient, concurrent medication, and other factors which those skilled in the art will recognize. Generally, dosage levels of between 0.0001 to 10 mg/kg. of body weight daily are administered to the patient, e.g., humans and elderly humans, to obtain effective antagonism of orexin receptors. The dosage range will generally be about 0.5 mg to 1.0 g. per patient per day which

may be administered in single or multiple doses. In one embodiment, the dosage range will be about 0.5 mg to 500 mg per patient per day; in another embodiment about 0.5 mg to 200 mg per patient per day; and in yet another embodiment about 5 mg to 50 mg per patient per day.

Pharmaceutical compositions of the present invention may be provided in a solid dosage

5 formulation such as comprising about 0.5 mg to 500 mg active ingredient, or comprising about 1 mg to 250 mg active ingredient. The pharmaceutical composition may be provided in a solid dosage formulation comprising about 1 mg, 5 mg, 10 mg, 25 mg, 50 mg, 100 mg, 200 mg or 250 mg active ingredient. For oral administration, the compositions may be provided in the form of tablets containing 1.0 to 1000 milligrams of the active ingredient, such as 1, 5, 10, 15, 20, 25, 50,
10 75, 100, 150, 200, 250, 300, 400, 500, 600, 750, 800, 900, and 1000 milligrams of the active ingredient for the symptomatic adjustment of the dosage to the patient to be treated. The compounds may be administered on a regimen of 1 to 4 times per day, such as once or twice per day.

The compounds of the present invention may be used in combination with one or
15 more other drugs in the treatment, prevention, control, amelioration, or reduction of risk of diseases or conditions for which compounds of the present invention or the other drugs may have utility, where the combination of the drugs together are safer or more effective than either drug alone. Such other drug(s) may be administered, by a route and in an amount commonly used therefor, contemporaneously or sequentially with a compound of the present invention. When a
20 compound of the present invention is used contemporaneously with one or more other drugs, a pharmaceutical composition in unit dosage form containing such other drugs and the compound of the present invention is contemplated. However, the combination therapy may also includes therapies in which the compound of the present invention and one or more other drugs are administered on different overlapping schedules. It is also contemplated that when used in
25 combination with one or more other active ingredients, the compounds of the present invention and the other active ingredients may be used in lower doses than when each is used singly. Accordingly, the pharmaceutical compositions of the present invention include those that contain one or more other active ingredients, in addition to a compound of the present invention. The above combinations include combinations of a compound of the present invention not only with
30 one other active compound, but also with two or more other active compounds.

Likewise, compounds of the present invention may be used in combination with other drugs that are used in the prevention, treatment, control, amelioration, or reduction of risk of the diseases or conditions for which compounds of the present invention are useful. Such other drugs may be administered, by a route and in an amount commonly used therefor,
35 contemporaneously or sequentially with a compound of the present invention. When a

compound of the present invention is used contemporaneously with one or more other drugs, a pharmaceutical composition containing such other drugs in addition to the compound of the present invention is contemplated. Accordingly, the pharmaceutical compositions of the present invention include those that also contain one or more other active ingredients, in addition to a
5 compound of the present invention.

The weight ratio of the compound of the present invention to the second active ingredient may be varied and will depend upon the effective dose of each ingredient. Generally, an effective dose of each will be used. Thus, for example, when a compound of the present invention is combined with another agent, the weight ratio of the
10 compound of the present invention to the other agent will generally range from about 1000:1 to about 1:1000, such as about 200:1 to about 1:200. Combinations of a compound of the present invention and other active ingredients will generally also be within the aforementioned range, but in each case, an effective dose of each active ingredient should be used. In such combinations the compound of the present invention and other active agents may be
15 administered separately or in conjunction. In addition, the administration of one element may be prior to, concurrent to, or subsequent to the administration of other agent(s).

The compounds of the present invention may be administered in combination with other compounds which are known in the art to be useful for enhancing sleep quality and preventing and treating sleep disorders and sleep disturbances, including e.g., sedatives,
20 hypnotics, anxiolytics, antipsychotics, antianxiety agents, antihistamines, benzodiazepines, barbiturates, cyclopyrrolones, GABA agonists, 5HT-2 antagonists including 5HT-2A antagonists and 5HT-2A/2C antagonists, histamine antagonists including histamine H3 antagonists, histamine H3 inverse agonists, imidazopyridines, minor tranquilizers, melatonin agonists and antagonists, melatonergic agents, other orexin antagonists, orexin agonists, prokineticin agonists
25 and antagonists, pyrazolopyrimidines, T-type calcium channel antagonists, triazolopyridines, and the like, such as: adinazolam, allobarbitol, alonimid, alprazolam, amitriptyline, amobarbital, amoxapine, armodafinil, APD-125, bentazepam, benzoctamine, brotizolam, bupropion, busprione, butabarbital, butalbital, capromorelin, capuride, carbocloral, chloral betaine, chloral hydrate, chlordiazepoxide, clonipramine, clonazepam, cloperidone, clorazepate, clorethate,
30 clozapine, conazepam, cyprazepam, desipramine, dexclamol, diazepam, dichloralphenazone, divalproex, diphenhydramine, doxepin, EMD-281014, eplivanserin, estazolam, eszopiclone, ethchlorynol, etomidate, fenobam, flunitrazepam, flurazepam, fluvoxamine, fluoxetine, fosazepam, gaboxadol, glutethimide, halazepam, hydroxyzine, ibutamoren, imipramine, indiplon, lithium, lorazepam, lormetazepam, LY-156735, maprotiline, MDL-100907,
35 mecloqualone, melatonin, mephobarbital, meprobamate, methaqualone, methypylon, midaflur,

midazolam, modafinil, nefazodone, NGD-2-73, nisobamate, nitrazepam, nortriptyline, oxazepam, paraldehyde, paroxetine, pentobarbital, perlapine, perphenazine, phenelzine, phenobarbital, prazepam, promethazine, propofol, protriptyline, quazepam, ramelteon, reclazepam, roletamide, secobarbital, sertraline, suproclone, TAK-375, temazepam, thioridazine, tiagabine, tracazolate, tranylecypromaine, trazodone, triazolam, trepipam, tricetamide, triclofos, trifluoperazine, trimetozine, trimipramine, uldazepam, venlafaxine, zaleplon, zolazepam, zopiclone, zolpidem, and salts thereof, and combinations thereof, and the like, or the compound of the present invention may be administered in conjunction with the use of physical methods such as with light therapy or electrical stimulation.

In another embodiment, the subject compound may be employed in combination with other compounds which are known in the art, either administered separately or in the same pharmaceutical compositions, include, but are not limited to: insulin sensitizers including (i) PPAR γ antagonists such as glitazones (e.g. ciglitazone; darglitazone; englitazone; isaglitazone (MCC-555); pioglitazone; rosiglitazone; troglitazone; tularik; BRL49653; CLX-0921; 5-BTZD), GW-0207, LG-100641, and LY-300512, and the like); (iii) biguanides such as metformin and phenformin; (b) insulin or insulin mimetics, such as biota, LP-100, novarapid, insulin detemir, insulin lispro, insulin glargine, insulin zinc suspension (lente and ultralente); Lys-Pro insulin, GLP-1 (73-7) (insulintropin); and GLP-1 (7-36)-NH₂); (c) sulfonylureas, such as acetohexamide; chlorpropamide; diabinese; glibenclamide; glipizide; glyburide; glimepiride; gliclazide; glipentide; gliquidone; glisolamide; tolazamide; and tolbutamide; (d) α -glucosidase inhibitors, such as acarbose, adiposine; camiglibose; emiglitate; miglitol; voglibose; pradimicin-Q; salbostatin; CKD-711; MDL-25,637; MDL-73,945; and MOR 14, and the like; (e) cholesterol lowering agents such as (i) HMG-CoA reductase inhibitors (atorvastatin, itavastatin, fluvastatin, lovastatin, pravastatin, rivastatin, rosuvastatin, simvastatin, and other statins), (ii) bile acid absorbers/sequestrants, such as cholestyramine, colestipol, dialkylaminoalkyl derivatives of a cross-linked dextran; Colestid®; LoCholest®, and the like, (ii) nicotiny alcohol, nicotinic acid or a salt thereof, (iii) proliferator-activator receptor α agonists such as fenofibric acid derivatives (gemfibrozil, clofibrate, fenofibrate and benzaifibrate), (iv) inhibitors of cholesterol absorption such as stanol esters, beta-sitosterol, sterol glycosides such as tiqueside; and azetidinones such as ezetimibe, and the like, and (acyl CoA:cholesterol acyltransferase (ACAT)) inhibitors such as avasimibe, and melinamide, (v) anti-oxidants, such as probucol, (vi) vitamin E, and (vii) thyromimetics; (f) PPAR α agonists such as beclofibrate, benzaifibrate, ciprofibrate, clofibrate, etofibrate, fenofibrate, and gemfibrozil; and other fibric acid derivatives, such as Atromid®, Lipid® and Tricor®, and the like, and PPAR α agonists as described in WO 97/36579 by Glaxo; (g) PPAR δ agonists; (h) PPAR α/δ agonists, such as muraglitazar, and the compounds disclosed

in US 6,414,002; and (i) anti-obesity agents, such as (1) growth hormone secretagogues, growth hormone secretagogue receptor agonists/antagonists, such as NN703, hexarelin, MK-0677, SM-130686, CP-424,391, L-692,429, and L-163,255; (2) protein tyrosine phosphatase-1B (PTP-1B) inhibitors; (3) cannabinoid receptor ligands, such as cannabinoid CB₁ receptor antagonists or

5 inverse agonists, such as rimonabant (Sanofi Synthelabo), AMT-251, and SR-14778 and SR 141716A (Sanofi Synthelabo), SLV-319 (Solvay), BAY 65-2520 (Bayer); (4) anti-obesity serotonergic agents, such as fenfluramine, dexfenfluramine, phentermine, and sibutramine; (5) β ₃-adrenoreceptor agonists, such as AD9677/TAK677 (Dainippon/Takeda), CL-316,243, SB 418790, BRL-37344, L-796568, BMS-196085, BRL-35135A, CGP12177A, BTA-243,

10 Trecadrine, Zeneca D7114, SR 59119A; (6) pancreatic lipase inhibitors, such as orlistat (Xenical®), Triton WR1339, RHC80267, lipstatin, tetrahydrolipstatin, teasaponin, diethylumbelliferyl phosphate; (7) neuropeptide Y1 antagonists, such as BIBP3226, J-115814, BIBO 3304, LY-357897, CP-671906, GI-264879A; (8) neuropeptide Y5 antagonists, such as GW-569180A, GW-594884A, GW-587081X, GW-548118X, FR226928, FR 240662,

15 FR252384, 1229U91, GI-264879A, CGP71683A, LY-377897, PD-160170, SR-120562A, SR-120819A and JCF-104; (9) melanin-concentrating hormone (MCH) receptor antagonists; (10) melanin-concentrating hormone 1 receptor (MCH1R) antagonists, such as T-226296 (Takeda); (11) melanin-concentrating hormone 2 receptor (MCH2R) agonist/antagonists; (12) orexin receptor antagonists, such as SB-334867-A, and those disclosed in patent publications herein;

20 (13) serotonin reuptake inhibitors such as fluoxetine, paroxetine, and sertraline; (14) melanocortin agonists, such as Melanotan II; (15) other Mc4r (melanocortin 4 receptor) agonists, such as CHIR86036 (Chiron), ME-10142, and ME-10145 (Melacure), CHIR86036 (Chiron); PT-141, and PT-14 (Palatin); (16) 5HT-2 agonists; (17) 5HT_{2C} (serotonin receptor 2C) agonists, such as BVT933, DPCA37215, WAY161503, R-1065; (18) galanin antagonists; (19) CCK

25 agonists; (20) CCK-A (cholecystikinin-A) agonists, such as AR-R 15849, GI 181771, JMV-180, A-71378, A-71623 and SR14613; (22) corticotropin-releasing hormone agonists; (23) histamine receptor-3 (H₃) modulators; (24) histamine receptor-3 (H₃) antagonists/inverse agonists, such as hioperamide, 3-(1H-imidazol-4-yl)propyl N-(4-pentenyl)carbamate, clobenpropit, iodophenpropit, imoproxifan, GT2394 (Gliatech), and O-[3-(1H-imidazol-4-yl)propanol]-

30 carbamates; (25) β -hydroxy steroid dehydrogenase-1 inhibitors (β -HSD-1); (26) PDE (phosphodiesterase) inhibitors, such as theophylline, pentoxifylline, zaprinast, sildenafil, amrinone, milrinone, cilostamide, rolipram, and cilomilast; (27) phosphodiesterase-3B (PDE3B) inhibitors; (28) NE (norepinephrine) transport inhibitors, such as GW 320659, despiramine, talsupram, and nomifensine; (29) ghrelin receptor antagonists; (30) leptin, including recombinant

35 human leptin (PEG-OB, Hoffman La Roche) and recombinant methionyl human leptin (Amgen);

(31) leptin derivatives; (32) BRS3 (bombesin receptor subtype 3) agonists such as [D-Phe6,beta-Ala11,Phe13,Nle14]Bn(6-14) and [D-Phe6,Phe13]Bn(6-13)propylamide, and those compounds disclosed in Pept. Sci. 2002 Aug; 8(8): 461-75); (33) CNTF (Ciliary neurotrophic factors), such as GI-181771 (GlaxoSmithKline), SR146131 (Sanofi Synthelabo), butabindide, PD170,292, and PD 149164 (Pfizer); (34) CNTF derivatives, such as axokine (Regeneron); (35) monoamine reuptake inhibitors, such as sibutramine; (36) UCP-1 (uncoupling protein-1), 2, or 3 activators, such as phytanic acid, 4-[(E)-2-(5,6,7,8-tetrahydro-5,5,8,8-tetramethyl-2-naphthalenyl)-1-propenyl]benzoic acid (TTNPB), retinoic acid; (37) thyroid hormone β agonists, such as KB-2611 (KaroBioBMS); (38) FAS (fatty acid synthase) inhibitors, such as Cerulenin and C75; (39) DGAT1 (diacylglycerol acyltransferase 1) inhibitors; (40) DGAT2 (diacylglycerol acyltransferase 2) inhibitors; (41) ACC2 (acetyl-CoA carboxylase-2) inhibitors; (42) glucocorticoid antagonists; (43) acyl-estrogens, such as oleoyl-estrone, disclosed in del Mar-Grasa, M. et al., Obesity Research, 9:202-9 (2001); (44) dipeptidyl peptidase IV (DP-IV) inhibitors, such as isoleucine thiazolidide, valine pyrrolidide, NVP-DPP728, LAF237, MK-431, P93/01, TSL 225, TMC-2A/2B/2C, FE 999011, P9310/K364, VIP 0177, SDZ 274-444; (46) dicarboxylate transporter inhibitors; (47) glucose transporter inhibitors; (48) phosphate transporter inhibitors; (49) Metformin (Glucophage®); and (50) Topiramate (Topimax®); and (50) peptide YY, PYY 3-36, peptide YY analogs, derivatives, and fragments such as BIM-43073D, BIM-43004C (Olitvak, D.A. et al., Dig. Dis. Sci. 44(3):643-48 (1999)); (51) Neuropeptide Y2 (NPY2) receptor agonists such NPY3-36, N acetyl [Leu(28,31)] NPY 24-36, TASP-V, and cyclo-(28/32)-Ac-[Lys28-Glu32]-(25-36)-pNPY; (52) Neuropeptide Y4 (NPY4) agonists such as pancreatic peptide (PP), and other Y4 agonists such as 1229U91; (54) cyclooxygenase-2 inhibitors such as etoricoxib, celecoxib, valdecoxib, parecoxib, lumiracoxib, BMS347070, tiracoxib or JTE522, ABT963, CS502 and GW406381, and pharmaceutically acceptable salts thereof; (55) Neuropeptide Y1 (NPY1) antagonists such as BIBP3226, J-115814, BIBO 3304, LY-357897, CP-671906, GI-264879A; (56) Opioid antagonists such as nalmefene (Revex ®), 3-methoxynaltrexone, naloxone, naltrexone; (57) 11 β HSD-1 (11-beta hydroxy steroid dehydrogenase type 1) inhibitor such as BVT 3498, BVT 2733; (58) aminorex; (59) amphechloral; (60) amphetamine; (61) benzphetamine; (62) chlorphentermine; (63) clobenzorex; (64) cloforex; (65) clominorex; (66) clortermine; (67) cyclexedrine; (68) dextroamphetamine; (69) diphemethoxidine, (70) N-ethylamphetamine; (71) fenbutrazate; (72) fenisorex; (73) fenproporex; (74) fludorex; (75) fluminorex; (76) furfurylmethylamphetamine; (77) levamfetamine; (78) levophacetoperane; (79) mefenorex; (80) metamfepramone; (81) methamphetamine; (82) norpseudoephedrine; (83) pentorex; (84) phendimetrazine; (85) phenmetrazine; (86) picilorex; (87) phytopharm 57; and (88) zonisamide.

In another embodiment, the subject compound may be employed in combination with an anti-depressant or anti-anxiety agent, including norepinephrine reuptake inhibitors (including tertiary amine tricyclics and secondary amine tricyclics), selective serotonin reuptake inhibitors (SSRIs), monoamine oxidase inhibitors (MAOIs), reversible inhibitors of monoamine oxidase (RIMAs), serotonin and noradrenaline reuptake inhibitors (SNRIs), corticotropin releasing factor (CRF) antagonists, α -adrenoreceptor antagonists, neurokinin-1 receptor antagonists, atypical anti-depressants, benzodiazepines, 5-HT_{1A} agonists or antagonists, especially 5-HT_{1A} partial agonists, and corticotropin releasing factor (CRF) antagonists. Specific agents include: amitriptyline, clomipramine, doxepin, imipramine and trimipramine; amoxapine, desipramine, maprotiline, nortriptyline and protriptyline; fluoxetine, fluvoxamine, paroxetine and sertraline; isocarboxazid, phenelzine, tranylcypromine and selegiline; moclobemide; venlafaxine; aprepitant; bupropion, lithium, nefazodone, trazodone and viloxazine; alprazolam, chlordiazepoxide, clonazepam, chlorazepate, diazepam, halazepam, lorazepam, oxazepam and prazepam; buspirone, flesinoxan, gepirone and ipsapirone, and pharmaceutically acceptable salts thereof.

In another embodiment, the subject compound may be employed in combination with anti-Alzheimer's agents; beta-secretase inhibitors; gamma-secretase inhibitors; growth hormone secretagogues; recombinant growth hormone; HMG-CoA reductase inhibitors; NSAID's including ibuprofen; vitamin E; anti-amyloid antibodies; CB-1 receptor antagonists or CB-1 receptor inverse agonists; antibiotics such as doxycycline and rifampin; N-methyl-D-aspartate (NMDA) receptor antagonists, such as memantine; cholinesterase inhibitors such as galantamine, rivastigmine, donepezil, and tacrine; growth hormone secretagogues such as ibutamoren, ibutamoren mesylate, and capromorelin; histamine H₃ antagonists; AMPA agonists; PDE IV inhibitors; GABA_A inverse agonists; or neuronal nicotinic agonists.

In another embodiment, the subject compound may be employed in combination with sedatives, hypnotics, anxiolytics, antipsychotics, antianxiety agents, cyclopyrrolones, imidazopyridines, pyrazolopyrimidines, minor tranquilizers, melatonin agonists and antagonists, melatonergic agents, benzodiazepines, barbiturates, 5HT-2 antagonists, and the like, such as: adinazolam, allobarbitol, alonimid, alprazolam, amitriptyline, amobarbital, amoxapine, bentazepam, benzoctamine, brotizolam, bupropion, busprione, butabarbital, butalbital, capuride, carbocloral, chloral betaine, chloral hydrate, chlordiazepoxide, clomipramine, clonazepam, cloperidone, clorazepate, clorethate, clozapine, cyprazepam, desipramine, dexclamol, diazepam, dichloralphenazone, divalproex, diphenhydramine, doxepin, estazolam, ethchlorvynol, etomidate, fenobam, flunitrazepam, flurazepam, fluvoxamine, fluoxetine, fosazepam, glutethimide, halazepam, hydroxyzine, imipramine, lithium, lorazepam, lormetazepam,

maprotiline, mecloqualone, melatonin, mephobarbital, meprobamate, methaqualone, midaflur, midazolam, nefazodone, nisobamate, nitrazepam, nortriptyline, oxazepam, paraldehyde, paroxetine, pentobarbital, perlapine, perphenazine, phenelzine, phenobarbital, prazepam, promethazine, propofol, protriptyline, quazepam, reclazepam, roletamide, secobarbital, 5 sertraline, suproclone, temazepam, thioridazine, tracazolate, tranlycypromaine, trazodone, triazolam, trepipam, tricetamide, triclofos, trifluoperazine, trimetozine, trimipramine, uldazepam, venlafaxine, zaleplon, zolazepam, zolpidem, and salts thereof, and combinations thereof, and the like, or the subject compound may be administered in conjunction with the use of physical methods such as with light therapy or electrical stimulation.

10 In another embodiment, the subject compound may be employed in combination with levodopa (with or without a selective extracerebral decarboxylase inhibitor such as carbidopa or benserazide), anticholinergics such as biperiden (optionally as its hydrochloride or lactate salt) and trihexyphenidyl (benzhexol) hydrochloride, COMT inhibitors such as entacapone, MOA-B inhibitors, antioxidants, A2a adenosine receptor antagonists, cholinergic 15 agonists, NMDA receptor antagonists, serotonin receptor antagonists and dopamine receptor agonists such as alantemol, bromocriptine, fenoldopam, lisuride, naxagolide, pergolide and pramipexole. It will be appreciated that the dopamine agonist may be in the form of a pharmaceutically acceptable salt, for example, alantemol hydrobromide, bromocriptine mesylate, fenoldopam mesylate, naxagolide hydrochloride and pergolide mesylate. Lisuride and 20 pramipexol are commonly used in a non-salt form.

In another embodiment, the subject compound may be employed in combination with acetophenazine, alantemol, benzhexol, bromocriptine, biperiden, chlorpromazine, chlorprothixene, clozapine, diazepam, fenoldopam, fluphenazine, haloperidol, levodopa, levodopa with benserazide, levodopa with carbidopa, lisuride, loxapine, mesoridazine, 25 molindolone, naxagolide, olanzapine, pergolide, perphenazine, pimozide, pramipexole, risperidone, sulpiride, tetrabenazine, trihexyphenidyl, thioridazine, thiothixene or trifluoperazine.

In another embodiment, the subject compound may be employed in combination with a compound from the phenothiazine, thioxanthene, heterocyclic dibenzazepine, 30 butyrophenone, diphenylbutylpiperidine and indolone classes of neuroleptic agent. Suitable examples of phenothiazines include chlorpromazine, mesoridazine, thioridazine, acetophenazine, fluphenazine, perphenazine and trifluoperazine. Suitable examples of thioxanthenes include chlorprothixene and thiothixene. An example of a dibenzazepine is clozapine. An example of a butyrophenone is haloperidol. An example of a diphenylbutylpiperidine is pimozide. An 35 example of an indolone is molindolone. Other neuroleptic agents include loxapine, sulpiride and

risperidone. It will be appreciated that the neuroleptic agents when used in combination with the subject compound may be in the form of a pharmaceutically acceptable salt, for example, chlorpromazine hydrochloride, mesoridazine besylate, thioridazine hydrochloride, acetophenazine maleate, fluphenazine hydrochloride, flurphenazine enathate, fluphenazine decanoate, trifluoperazine hydrochloride, thiothixene hydrochloride, haloperidol decanoate, loxapine succinate and molindone hydrochloride. Perphenazine, chlorprothixene, clozapine, haloperidol, pimozone and risperidone are commonly used in a non-salt form.

In another embodiment, the subject compound may be employed in combination with an anorectic agent such as aminorex, amfecloral, amphetamine, benzphetamine, chlorphentermine, clobenzorex, cloforex, clominorex, clortermine, cyclexedrine, dexfenfluramine, dextroamphetamine, diethylpropion, diphemethoxidine, N-ethylamphetamine, fenbutrazate, fenfluramine, fenisorex, fenproporex, fludorex, fluminorex, furfurylmethylamphetamine, levamfetamine, levophacetoperane, mazindol, mefenorex, metamfepramone, methamphetamine, norpseudoephedrine, pentorex, phendimetrazine, phenmetrazine, phentermine, phenylpropanolamine, picilorex and sibutramine; selective serotonin reuptake inhibitor (SSRI); halogenated amphetamine derivatives, including chlorphentermine, cloforex, clortermine, dexfenfluramine, fenfluramine, picilorex and sibutramine; and pharmaceutically acceptable salts thereof.

In another embodiment, the subject compound may be employed in combination with an opiate agonist, a lipoxygenase inhibitor, such as an inhibitor of 5-lipoxygenase, a cyclooxygenase inhibitor, such as a cyclooxygenase-2 inhibitor, an interleukin inhibitor, such as an interleukin-1 inhibitor, an NMDA antagonist, an inhibitor of nitric oxide or an inhibitor of the synthesis of nitric oxide, a non-steroidal antiinflammatory agent, or a cytokine-suppressing antiinflammatory agent, for example with a compound such as acetaminophen, aspirin, codiene, fentanyl, ibuprofen, indomethacin, ketorolac, morphine, naproxen, phenacetin, piroxicam, a steroidal analgesic, sufentanyl, sunlindac, tenidap, and the like. Similarly, the subject compound may be administered with a pain reliever; a potentiator such as caffeine, an H₂-antagonist, simethicone, aluminum or magnesium hydroxide; a decongestant such as phenylephrine, phenylpropanolamine, pseudoephedrine, oxymetazoline, ephinephrine, naphazoline, xylometazoline, propylhexedrine, or levo-desoxy-ephedrine; an antitussive such as codeine, hydrocodone, caramiphen, carbapentane, or dexamethorphan; a diuretic; and a sedating or non-sedating antihistamine.

The compounds of the present invention may be administered by oral, parenteral (e.g., intramuscular, intraperitoneal, intravenous, ICV, intracisternal injection or infusion, subcutaneous injection, or implant), by inhalation spray, nasal, vaginal, rectal, sublingual, or

topical routes of administration and may be formulated, alone or together, in suitable dosage unit formulations containing conventional non-toxic pharmaceutically acceptable carriers, adjuvants and vehicles appropriate for each route of administration. In addition to the treatment of warm-blooded animals such as mice, rats, horses, cattle, sheep, dogs, cats, monkeys, etc., the compounds of the invention are effective for use in humans.

The pharmaceutical compositions for the administration of the compounds of this invention may conveniently be presented in dosage unit form and may be prepared by any of the methods well known in the art of pharmacy. All methods include the step of bringing the active ingredient into association with the carrier which constitutes one or more accessory ingredients. In general, the pharmaceutical compositions are prepared by uniformly and intimately bringing the active ingredient into association with a liquid carrier or a finely divided solid carrier or both, and then, if necessary, shaping the product into the desired formulation. In the pharmaceutical composition the active object compound is included in an amount sufficient to produce the desired effect upon the process or condition of diseases. As used herein, the term "composition" is intended to encompass a product comprising the specified ingredients in the specified amounts, as well as any product which results, directly or indirectly, from combination of the specified ingredients in the specified amounts.

Pharmaceutical compositions intended for oral use may be prepared according to any method known to the art for the manufacture of pharmaceutical compositions and such compositions may contain one or more agents selected from the group consisting of sweetening agents, flavoring agents, coloring agents and preserving agents in order to provide pharmaceutically elegant and palatable preparations. Tablets contain the active ingredient in admixture with non-toxic pharmaceutically acceptable excipients which are suitable for the manufacture of tablets. These excipients may be for example, inert diluents, such as calcium carbonate, sodium carbonate, lactose, calcium phosphate or sodium phosphate; granulating and disintegrating agents, for example, corn starch, or alginic acid; binding agents, for example starch, gelatin or acacia, and lubricating agents, for example magnesium stearate, stearic acid or talc. The tablets may be uncoated or they may be coated by known techniques to delay disintegration and absorption in the gastrointestinal tract and thereby provide a sustained action over a longer period. Compositions for oral use may also be presented as hard gelatin capsules wherein the active ingredient is mixed with an inert solid diluent, for example, calcium carbonate, calcium phosphate or kaolin, or as soft gelatin capsules wherein the active ingredient is mixed with water or an oil medium, for example peanut oil, liquid paraffin, or olive oil. Aqueous suspensions contain the active materials in admixture with excipients suitable for the manufacture of aqueous suspensions. Oily suspensions may be formulated by suspending the

active ingredient in a suitable oil. Oil-in-water emulsions may also be employed. Dispersible powders and granules suitable for preparation of an aqueous suspension by the addition of water provide the active ingredient in admixture with a dispersing or wetting agent, suspending agent and one or more preservatives. Pharmaceutical compositions of the present compounds may be in the form of a sterile injectable aqueous or oleaginous suspension. The compounds of the present invention may also be administered in the form of suppositories for rectal administration. For topical use, creams, ointments, jellies, solutions or suspensions, etc., containing the compounds of the present invention may be employed. The compounds of the present invention may also be formulated for administered by inhalation. The compounds of the present invention may also be administered by a transdermal patch by methods known in the art.

Several methods for preparing the compounds of this invention are illustrated in the following Schemes and Examples. Starting materials are made according to procedures known in the art or as illustrated herein. The following abbreviations are used herein: Me: methyl; Et: ethyl; t-Bu: *tert*-butyl; Ar: aryl; Ph: phenyl; Bn: benzyl; Ac: acetyl; THF: tetrahydrofuran; DEAD: diethylazodicarboxylate; DBAD: di-*tert*-butylazodicarboxylate; DIPEA: N,N-diisopropylethylamine; DMSO: dimethylsulfoxide; EDC: N-(3-dimethylaminopropyl)-N'-ethylcarbodiimide; HOBT: hydroxybenzotriazole hydrate; Boc: *tert*-butoxy carbonyl; Et₃N: triethylamine; DCM: dichloromethane; DCE: dichloroethane; BSA: bovine serum albumin; TFA: trifluoroacetic acid; DMF: N,N-dimethylformamide; MTBE: methyl *tert*-butyl ether; SOCl₂: thionyl chloride; CDI: carbonyl diimidazole; rt: room temperature; HPLC: high performance liquid chromatography; T3P: 1-propylphosphonic anhydride. The compounds of the present invention can be prepared in a variety of fashions.

In some cases the final product may be further modified, for example, by manipulation of substituents. These manipulations may include, but are not limited to, reduction, oxidation, alkylation, acylation, and hydrolysis reactions which are commonly known to those skilled in the art. In some cases the order of carrying out the foregoing reaction schemes and examples may be varied to facilitate the reaction or to avoid unwanted reaction products. The following examples are provided so that the invention might be more fully understood. These examples are illustrative only and should not be construed as limiting the invention in any way.

SCHEME A

6-Methylnicotinic acid methyl ester (A-2)

A solution of 6-methylnicotinic acid (20 g, 146 mmol) in MeOH (300 ml) was treated with HCl gas until the solvent was saturated. The reaction was capped and stirred for 1.5 h at RT. The mixture was treated again with HCl gas until the solvent was saturated and was capped and stirred overnight at 22 °C. The solution was concentrated to yield A-2. Data for A-2: LRMS *m/z* (M+H): 152.75.

6-Methyl-3-piperidinecarboxylic acid methyl ester (A-3)

A solution of the A-2 (23 g, 152 mmol) in EtOH (200 ml) was treated with 5 mol% platinum oxide (1.728 g, 7.61 mmol) and acetic acid (8.71 ml, 152 mmol). The Parr bottle was evacuated and backfilled with H₂ (g) three times and stirred under a H₂ (g) atmosphere (45 psi, recharged 4 times) at 22 °C for 3h. The mixture was filtered through Celite and the filter cake was washed with MeOH. The filtrate was concentrated to yield product with a ~3.5:1 cis:trans diastereomer ratio. This material was diluted with 300 mL MeOH, treated with sodium methoxide (32.9 g, 183 mmol), heated to 50 °C, and stirred at this temp for 4 days. The mixture was cooled to 22 °C, neutralized to pH 7 with conc. HCl, filtered through celite and the filtrate was concentrated. The residue was suspended in MeOH and filtered again. The resulting filtrate was concentrated to yield A-3 (~3:1 trans:cis). Data for A-3: LRMS *m/z* (M+H): 158.9.

6-Methyl-3-piperidinemethanol (A-4)

A suspension of the amine hydrochloride, ~3:1 trans:cis (500 mg, 2.58 mmol) in THF (15 ml) was treated slowly with lithium aluminum hydride (3.37 ml, 7.75 mmol) at 22 °C. The solution was warmed to 0 °C and stirred for 20 min, then treated dropwise with 0.294 mL of water, 0.294 ml of 15% NaOH, and 0.882 mL of water successively. Sodium sulfate was added to the mixture. After stirring 20 min at 22 °C, the mixture was filtered and the filtrate was concentrated to yield A-4, as a colorless oil. Data for A-4: LRMS *m/z* (M+H): 130.2.

Benzyl (2R,5R)-5-(hydroxymethyl)-2-methylpiperidine-1-carboxylate (A-5)

A solution of the amine A-4 (350 mg, 2.71 mmol) in DCM (15 ml) was treated with TEA (0.755 ml, 5.42 mmol) and CBZ-Cl (0.387 ml, 2.71 mmol). The mixture was stirred at 22 °C and concentrated. The residue was partitioned between EtOAc and water. The organic phase was dried over Na₂SO₄, filtered and concentrated. The crude material was purified by gradient elution on silica gel (0 to 70% EtOAc in Hex) to yield 377 mg of racemic material (~3:1 trans:cis). The trans material was separated away from the cis diastereomers and into its enantiomers on a 5 cm OD chiral column by isocratic elution (93:7 Hexane:EtOH; 75 mL/min; 1 inj) with detection at 215 nm to yield 120 mg of A-5, peak 1 (colorless oil, 100% ee) and 114 mg of peak 2. (colorless oil, contaminated with 30% cis, 90% ee). Data for A-5: LRMS *m/z* (M+H): 264. Similarly, the cis diastereomer can be separated into its enantiomers and utilized in the following procedures to prepare (R,S) and (S,R) compounds.

[(3R,6R)-6-methylpiperidin-3-yl]methanol (A-6)

To a solution of A-5 (2.75g, 10.4 mmol) in MeOH (50 mL) was added 20% Pd(OH)₂ on carbon (~ 700 mg), the flask was evacuated and the atmosphere replaced with H₂. After stirring under a balloon of H₂ overnight, the reaction was filtered through Celite and concentrated to provide 1.29 g (96%) of A-6 as a white solid. Data for A-6: LRMS *m/z* (M+H): 130.2.

5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl chloride (A-7)

A solution of 2-iodo-5-methylbenzoic acid (4.0 g, 15.3 mmol) in DMF (10 mL) was treated with 1,2,3-triazole (2.1 g, 30.5 mmol), CsCO₃ (9.95 g, 30.5 mmol), CuI (0.145 g, 0.76 mmol) and trans-N,N'-dimethylcyclohexane-1,2-diamine (0.43 g, 3.05 mmol). The mixture was heated at 120 °C for 10 min in a microwave reactor. The reaction was cooled to room temperature, diluted with water, and washed with EtOAc. The aqueous phase was acidified with 1N HCl and extracted with EtOAc. The organic layer was dried over Na₂SO₄, filtered and concentrated. The residue was purified by gradient elution on SiO₂ (0 to 10% MeOH in DCM with 0.1% AcOH) to give the faster eluting 2-(2H-1,2,3-triazol-2-yl)-5-methylbenzoic acid, followed by the undesired regioisomer isomer, 1-(2H-1,2,3-triazol-2-yl)-5-methylbenzoic acid. A solution of the acid (3.56 g, 17.52 mmol) in 150 mL of DCM was stirred and cooled to 0°C. The solution was treated with oxalyl chloride (1.9 mL, 21.9 mmol) and DMF (68 µL, .878 mmol). The solution was slowly warmed to room temperature and stirred overnight. Solvent was concentrated and the resulting solid was azeotroped with DCM and concentrated to provide A-7 as a yellow solid.

{(3R,6R)-6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl}methanol (A-8)

To a solution of A-6 (1.25 g, 9.7 mmol) in CH₂Cl₂ (70 ml) at 0°C was added triethylamine (2.7 mL, 19.4 mmol) followed by A-7 (2.6 g, 11.6 mmol). After warming to room temperature and stirring overnight, the reaction was partitioned between CH₂Cl₂ and water. The layers were separated, the organic was washed with saturated aqueous NaHCO₃, water, dried over Na₂SO₄, filtered and concentrated. The crude material was purified by gradient elution on silica gel (0 to 100% EtOAc in Hex) to yield 1.9 g of A-8 as a white solid. Data for A-8: LRMS *m/z* (M+H): 315.3

(2R,5R)-5-[(3-fluorophenoxy)methyl]-2-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidine (A-9)

To a solution of A-8 (30 mg, 0.1 mmol), 3-fluorophenol (12 mg, 0.11 mmol), resin-bound triphenylphosphine (~0.13 mmol) in 1 mL CH₂Cl₂ was added DIAD (24 μ L, 0.12 mmol) and stirring was maintained at room temperature for 48 h. The reaction was then filtered, concentrated, and purified by reverse phase HPLC (5 to 95% CH₃CN in water modified with 0.1% TFA). Fractions containing product were free-based with NaHCO₃, extracted into EtOAc. Following separation of layers, the organic phase was washed with brine, dried over Na₂SO₄ and concentrated to provide A-9 as a colorless oil. Data for A-9: HRMS (M+H): 447.1606 found; 447.1593 required.

The following compounds were made by analogous procedures, substituting the required reagents as appropriate.

Cpd	Structure	Name	HRMS <i>m/z</i> (M+H)
A-10		(2 <i>R</i> ,5 <i>R</i>)-5-[(2-fluorophenoxy)methyl]-2-methyl-1-[5-methyl-2-(2 <i>H</i> -1,2,3-triazol-2-yl)benzoyl]piperidine	409.2040 found, 409.2034 required.
A-11		(2 <i>R</i> ,5 <i>R</i>)-5-[(3-chlorophenoxy)methyl]-2-methyl-1-[5-methyl-2-(2 <i>H</i> -1,2,3-triazol-2-yl)benzoyl]piperidine	425.1743 found, 425.1739 required.
A-12		(2 <i>R</i> ,5 <i>R</i>)-5-[(4-methoxyphenoxy)methyl]-2-methyl-1-[5-methyl-2-(2 <i>H</i> -1,2,3-triazol-2-yl)benzoyl]piperidine	421.2238 found, 421.2234 required.

A-13		7-((3 <i>R</i> ,6 <i>R</i>)-6-methyl-1-[2-(2 <i>H</i> -1,2,3-triazol-2-yl)benzoyl]piperidine-3-yl)methoxyquinoline	428.2057 found, 428.2081 required.

A-16		2-((3 <i>R</i> ,6 <i>R</i>)-6-methyl-1-[2-(2 <i>H</i> -1,2,3-triazol-2-yl)benzoyl]piperidine-3-yl)methoxyquinoline	428.2056 found, 428.2081 required.

SCHEME B

{(3*R*,6*R*)-6-methyl-1-[5-methyl-2-(2*H*-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl}methyl methanesulfonate (B-1)

To a solution of **A-8** (1.48 g, 4.7 mmol) in 25 mL CH_2Cl_2 was added triethylamine (1.98 mL, 14.1 mmol) and methanesulfonyl chloride (550 μL , 7.1 mmol). After stirring overnight at room temperature, the reaction was partitioned between 300 mL EtOAc and 60 mL saturated NaHCO_3 solution, the layers were separated, the organic was washed with water twice, then with brine, dried over Na_2SO_4 , and concentrated to provide 1.64 g of **B-1** as a white solid. Data for **B-1**: LRMS m/z ($M+H$): 393.2.

{(3*S*,6*R*)-6-methyl-1-[5-methyl-2-(2*H*-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl}acetonitrile (B-2)

To a solution of **B-1** (1.0 g, 2.55 mmol) in 8 mL DMSO was added sodium cyanide (375 mg, 7.6 mmol). After heating to 80°C for 18 hours, the reaction was cooled,

partitioned between EtOAc and water, the layers were separated, the aqueous was extracted again with EtOAc, the combined organics were washed with saturated NaHCO₃ solution, twice with water, then with brine, dried over Na₂SO₄, and concentrated. The residue was purified by gradient elution on silica gel (0 to 100% EtOAc in Hex) to yield 673 mg of B-2 as a white solid.

5 Data for B-2: LRMS *m/z* (M+H): 324.2.

{{(3*S*,6*R*)-6-methyl-1-[5-methyl-2-(2*H*-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl}acetic acid (B-3)}

10 A solution of B-2 (660 mg, 2.0 mmol) in 6 mL of 6M HCl was heated in a microwave for 15 minutes at 150°C and then concentrated to a white solid. The residue was suspended in 30 mL of 10% KHSO₄ solution and extracted three times with CH₂Cl₂, the organic phases were combined and washed with brine, dried over Na₂SO₄, and concentrated to yield 597 mg of B-3 as a white foam. Data for B-3: LRMS *m/z* (M+H): 343.2.

15 *N*-methoxy-*N*-methyl-2-{{(3*S*,6*R*)-6-methyl-1-[5-methyl-2-(2*H*-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl}acetamide (B-4)}

20 A solution of B-3 (150 mg, 0.44 mmol) in 2 mL DMF was treated with dimethylhydroxylamine hydrochloride (64 mg, 0.66 mmol), EDC (110 mg, 0.570 mmol), HOBT (87 mg, 0.57 mmol) and NMM (193 µL, 1.8 mmol). After stirring overnight at RT, the mixture was diluted with EtOAc, sat. aq. NaHCO₃, and separated. The organic phase was washed with water twice, then brine, dried over Na₂SO₄, filtered and concentrated. The crude material was purified by gradient elution on silica gel (0 to 100% EtOAc in Hex) to yield 155 mg of B-4 as a white solid. Data for B-4: LRMS *m/z* (M+H): 386.2.

25 2-{{(3*S*,6*R*)-6-methyl-1-[5-methyl-2-(2*H*-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl}-1-phenylethanone (B-5)}

30 To solution of B-4 (150 mg, 0.44 mmol) in 2 mL THF at -78°C was added a 3M solution of PhMgBr in THF (225 mL, 0.7 mmol). After warming to room temperature, LC/MS indicated only ~ 10 % conversion so the reaction was cooled back to -78°C and another portion of Grignard was added and the reaction was again warmed to room temperature. After stirring overnight, additional portions of Grignard were added at room temperature until LC/MS indicated no starting material remained. The reaction was quenched with saturated aqueous NH₄Cl solution, and extracted with EtOAc. The organic phase was washed with 10% KHSO₄ solution, sat. aq. NaHCO₃, brine, dried over Na₂SO₄, filtered and concentrated. The crude

material was purified by gradient elution on silica gel (0 to 100% EtOAc in Hex) to yield 98 mg of B-5 as a yellow foam. Data for B-5: HRMS (M+H): 403.2132 found; 403.2129 required.

SCHEME C

2-((3S,6R)-6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl)methyl-1H-benzimidazole (C-1)

To B-3 (50 mg, 0.15 mmol) and o-phenylenediamine (47 mg, 0.44 mmol) in a small vial was added 1 mL trimethylsilyl polyphosphate (~0.15 mmol). The vial was capped and placed in an oilbath at 180°C for 10 minutes. After cooling, the reaction was partitioned between EtOAc and saturated NaHCO₃ solution, the layers were separated, the organic was washed with water twice, then with brine, dried over Na₂SO₄, and concentrated. The crude material was purified by gradient elution on silica gel (0 to 100% EtOAc in Hex) to yield 52 mg of C-1 as an off-white foam. Data for C-1: HRMS (M+H): 415.2229 found; 415.2241 required.

1-methyl-2-((3S,6R)-6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl)methyl-1H-benzimidazole (C-2)

To a solution of C-1 (40 mg, 0.1 mmol) in 1 mL THF at 0°C was added iodomethane (6 mg, 0.12 mmol) in 1 mL THF, followed by NaH (6 mg, 0.15 mmol, 60% dispersion in oil). The reaction was allowed to warm to room temperature and stir 2.5 hours before quenching with several drops of 10% KHSO₄ solution. The solvent was evaporated with a stream of N₂, the residue was partitioned between CHCl₃ and saturated NaHCO₃ solution, and

the organic layer was loaded directly onto a silica column and purified by gradient elution on silica gel (0 to 100% EtOAc in Hex) to yield 37 mg of C-2 as an off-white foam. Data for C-2: HRMS (M+H): 429.2390 found; 429.2397 required.

- 5 The following compounds were made by analogous procedures, substituting the required reagents as appropriate.

Cpd	Structure	Name	HRMS m/z (M+H)
C-3		2-((3 <i>S</i> ,6 <i>R</i>)-6-methyl-1-[5-methyl-2-(2 <i>H</i> -1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl)methyl)-1,3-benzoxazole	416.2077 found, 416.2081 required.
C-4		2-((3 <i>S</i> ,6 <i>R</i>)-6-methyl-1-[5-methyl-2-(2 <i>H</i> -1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl)methyl)-1,3-benzothiazole	432.1849 found, 432.1853 required.
C-5		<i>N</i> -(4-fluorophenyl)-2-((3 <i>S</i> ,6 <i>R</i>)-6-methyl-1-[5-methyl-2-(2 <i>H</i> -1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl)acetamide	437.2091 found, 437.2096 required.
C-6		1-((3 <i>S</i> ,6 <i>R</i>)-6-methyl-1-[5-methyl-2-(2 <i>H</i> -1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl)acetyl)-1,2,3,4-tetrahydroquinoline	458.2548 found, 458.2551 required.

		tetrahydroquinoline

TABLE 1

Table 1 shows representative data for the compounds of the Examples as orexin-1 receptor (OX1R) and/or orexin-2 receptor (OX2R) antagonists as determined by the foregoing assays.

Cmpd	Structure	OX1R K _i (nM)	OX2R K _i (nM)
A-9		0.86 nM	0.36 nM
A-15		2.7 nM	0.2 nM
C-2		4.5 nM	4.6 nM
C-6		95 nM	6.9 nM

While the invention has been described and illustrated with reference to certain particular embodiments thereof, those skilled in the art will appreciate that various adaptations,

changes, modifications, substitutions, deletions, or additions of procedures and protocols may be made without departing from the spirit and scope of the invention.

WHAT IS CLAIMED IS:

1. A compound of the formula I:

I

wherein:

A is selected from the group consisting of phenyl, naphthyl and heteroaryl;

B is selected from the group consisting of phenyl, naphthyl, tetrahydroquinoliny,
tetrahydroisoquinoliny and heteroaryl;

X is -CH₂-, -CH₂-O-, -CH₂-(CO)-, or -CH₂-(CO)-NH-, with the proviso that if X is -CH₂-O-,
then B is other than pyridyl;

R^{1a}, R^{1b} and R^{1c} may be absent if the valency of A does not permit such substitution and are
independently selected from the group consisting of:

- (1) hydrogen,
- (2) halogen,
- (3) hydroxyl,
- (4) -(C=O)_m-O_n-C₁₋₆alkyl, where m is 0 or 1, n is 0 or 1 (wherein if m is 0 or n is 0,
a bond is present) and where the alkyl is unsubstituted or substituted with one or
more substituents selected from R¹³,
- (5) -(C=O)_m-O_n-C₃₋₆cycloalkyl, where the cycloalkyl is unsubstituted or substituted
with one or more substituents selected from R¹³,
- (6) -(C=O)_m-C₂₋₄alkenyl, where the alkenyl is unsubstituted or substituted with one
or more substituents selected from R¹³,
- (7) -(C=O)_m-C₂₋₄alkynyl, where the alkynyl is unsubstituted or substituted with one
or more substituents selected from R¹³,

- (8) $-(C=O)_m-O_n$ -phenyl or $-(C=O)_m-O_n$ -naphthyl, where the phenyl or naphthyl is unsubstituted or substituted with one or more substituents selected from R^{13} ,
- (9) $-(C=O)_m-O_n$ -heterocycle, where the heterocycle is unsubstituted or substituted with one or more substituents selected from R^{13} ,
- 5 (10) $-(C=O)_m-NR^{10}R^{11}$, wherein R^{10} and R^{11} are independently selected from the group consisting of:
- (a) hydrogen,
 - (b) C_{1-6} alkyl, which is unsubstituted or substituted with R^{13} ,
 - (c) C_{3-6} alkenyl, which is unsubstituted or substituted with R^{13} ,
 - 10 (d) C_{3-6} alkynyl, which is unsubstituted or substituted with R^{13} ,
 - (e) C_{3-6} cycloalkyl which is unsubstituted or substituted with R^{13} ,
 - (f) phenyl, which is unsubstituted or substituted with R^{13} , and
 - (g) heterocycle, which is unsubstituted or substituted with R^{13} ,
- (11) $-S(O)_2-NR^{10}R^{11}$,
- 15 (12) $-S(O)_q-R^{12}$, where q is 0, 1 or 2 and where R^{12} is selected from the definitions of R^{10} and R^{11} ,
- (13) $-CO_2H$,
- (14) $-CN$, and
- (15) $-NO_2$;

20 R^{2a} , R^{2b} and R^{2c} may be absent if the valency of B does not permit such substitution and are independently selected from the group consisting of:

- (1) hydrogen,
- (2) halogen,
- 25 (3) hydroxyl,
- (4) $-(C=O)_m-O_n-C_{1-6}$ alkyl, where the alkyl is unsubstituted or substituted with one or more substituents selected from R^{13} ,
- (5) $-(C=O)_m-O_n-C_{3-6}$ cycloalkyl, where the cycloalkyl is unsubstituted or substituted with one or more substituents selected from R^{13} ,
- 30 (6) $-(C=O)_m-C_{2-4}$ alkenyl, where the alkenyl is unsubstituted or substituted with one or more substituents selected from R^{13} ,
- (7) $-(C=O)_m-C_{2-4}$ alkynyl, where the alkynyl is unsubstituted or substituted with one or more substituents selected from R^{13} ,

- (8) $-(C=O)_m-O_n$ -phenyl or $-(C=O)_m-O_n$ -naphthyl, where the phenyl or naphthyl is unsubstituted or substituted with one or more substituents selected from R^{13} ,
 (9) $-(C=O)_m-O_n$ -heterocycle, where the heterocycle is unsubstituted or substituted with one or more substituents selected from R^{13} ,
 5 (10) $-(C=O)_m-NR^{10}R^{11}$,
 (11) $-S(O)_2-NR^{10}R^{11}$,
 (12) $-S(O)_q-R^{12}$,
 (13) $-CO_2H$,
 (14) $-CN$, and
 10 (15) $-NO_2$;

R^3 is C_{1-6} alkyl or C_{3-6} cycloalkyl, which is unsubstituted or substituted with one or more substituents selected from R^{13} ;

15 R^{13} is selected from the group consisting of:

- (1) halogen,
 (2) hydroxyl,
 (3) $-(C=O)_m-O_n-C_{1-6}$ alkyl, where the alkyl is unsubstituted or substituted with one or more substituents selected from R^{14} ,
 20 (4) $-O_n-(C_{1-3})$ perfluoroalkyl,
 (5) $-(C=O)_m-O_n-C_{3-6}$ cycloalkyl, where the cycloalkyl is unsubstituted or substituted with one or more substituents selected from R^{14} ,
 (6) $-(C=O)_m-C_{2-4}$ alkenyl, where the alkenyl is unsubstituted or substituted with one or more substituents selected from R^{14} ,
 25 (7) $-(C=O)_m-C_{2-4}$ alkynyl, where the alkynyl is unsubstituted or substituted with one or more substituents selected from R^{14} ,
 (8) $-(C=O)_m-O_n$ -phenyl or $-(C=O)_m-O_n$ -naphthyl, where the phenyl or naphthyl is unsubstituted or substituted with one or more substituents selected from R^{14} ,
 (9) $-(C=O)_m-O_n$ -heterocycle, where the heterocycle is unsubstituted or substituted with one or more substituents selected from R^{14} ,
 30 (10) $-(C=O)_m-NR^{10}R^{11}$,
 (11) $-S(O)_2-NR^{10}R^{11}$,
 (12) $-S(O)_q-R^{12}$,
 (13) $-CO_2H$,

(14) -CN, and

(15) -NO₂;

R¹⁴ is selected from the group consisting of:

- (1) hydroxyl,
- (2) halogen,
- (3) C₁-6alkyl,
- (4) -C₃-6cycloalkyl,
- (5) -O-C₁-6alkyl,
- (6) -O(C=O)-C₁-6alkyl,
- (7) -NH-C₁-6alkyl,
- (8) phenyl,
- (9) heterocycle,
- (10) -CO₂H, and
- (11) -CN;

or a pharmaceutically acceptable salt thereof.

2. The compound of Claim 1 of the formula II:

II

or a pharmaceutically acceptable salt thereof.

3. The compound of Claim 1 wherein A is selected from the group consisting of: phenyl, pyrazolyl, and thiazolyl.

4. The compound of Claim 1 wherein B is independently selected from the group consisting of:

- (1) phenyl,
- (2) quinoline,

- (3) isoquinoline,
- (4) tetrahydroquinoline,
- (5) tetrahydroisoquinoline,
- (6) benzoxazole,
- 5 (7) thienopyridine,
- (8) pyridine,
- (9) furan,
- (10) naphthyridine,
- (11) benzothiazole, and
- 10 (12) pyrimidine;

with the proviso that if X is -CH₂-O-, then B is other than pyridine.

5. The compound of Claim 1 wherein R^{1a}, R^{1b} and R^{1c} are independently selected from the group consisting of:

- 15 (1) hydrogen,
- (2) halogen,
- (3) hydroxyl,
- (4) C₁-6alkyl, which is unsubstituted or substituted with halogen, hydroxyl, phenyl or naphthyl,
- 20 (5) -O-C₁-6alkyl, which is unsubstituted or substituted with halogen, hydroxyl or phenyl,
- (6) heteroaryl, wherein heteroaryl is selected from triazolyl, oxazolyl, pyrrolyl, imidazolyl, indolyl, pyridyl, and pyrimidinyl, which is unsubstituted or substituted with halogen, hydroxyl, C₁-6alkyl, -O-C₁-6alkyl or -NO₂,
- 25 (7) phenyl, which is unsubstituted or substituted with halogen, hydroxyl, C₁-6alkyl, -O-C₁-6alkyl or -NO₂,
- (8) -O-phenyl, which is unsubstituted or substituted with halogen, hydroxyl, C₁-6alkyl, -O-C₁-6alkyl or -NO₂, and
- (9) -NH-C₁-6alkyl, or -N(C₁-6alkyl)(C₁-6alkyl), which is unsubstituted or
- 30 substituted with halogen, hydroxyl, C₁-6alkyl, -O-C₁-6alkyl or -NO₂.

6 The compound of Claim 5 wherein R^{1a}, R^{1b} and R^{1c} are independently selected from the group consisting of:

- (1) hydrogen,
- 35 (2) halogen,

- (3) C₁₋₆alkyl,
(4) triazolyl,
(5) oxazolyl,
(6) pyrimidinyl, and
5 (7) phenyl.

7. The compound of Claim 6 wherein R^{1c} is hydrogen and R^{1a} and R^{1b} are independently selected from the group consisting of:

- (1) hydrogen,
10 (2) chloro,
(3) fluororo,
(4) methyl,
(5) triazolyl,
(6) oxazolyl,
15 (7) pyrimidinyl, and
(8) phenyl.

8. The compound of Claim 1 wherein R^{2a}, R^{2b} and R^{2c} are independently selected from the group consisting of:

- (1) hydrogen,
20 (2) halogen,
(3) hydroxyl,
(4) C₁₋₆alkyl, which is unsubstituted or substituted with halogen, hydroxyl or phenyl or naphthyl,
25 (5) -O-C₁₋₆alkyl, which is unsubstituted or substituted with halogen, hydroxyl or phenyl,
(6) heteroaryl, wherein heteroaryl is selected from pyrrolyl, imidazolyl, indolyl, pyridyl, and pyrimidinyl, which is unsubstituted or substituted with halogen, hydroxyl, C₁₋₆alkyl, -O-C₁₋₆alkyl or-NO₂,
30 (7) phenyl, which is unsubstituted or substituted with halogen, hydroxyl, C₁₋₆alkyl, -O-C₁₋₆alkyl or-NO₂,
(8) -O-phenyl, which is unsubstituted or substituted with halogen, hydroxyl, C₁₋₆alkyl, -O-C₁₋₆alkyl or-NO₂, and

- (9) -NH-C₁₋₆alkyl, or -N(C₁₋₆alkyl)(C₁₋₆alkyl), which is unsubstituted or substituted with halogen, hydroxyl, C₁₋₆alkyl, -O-C₁₋₆alkyl or -NO₂.

9. The compound of Claim 8 wherein R^{2a}, R^{2b} and R^{2c} are independently
5 selected from the group consisting of:

- (1) hydrogen,
(2) halogen,
(3) C₁₋₆alkyl, which is unsubstituted or substituted with halogen,
(4) -O-C₁₋₆alkyl, which is unsubstituted or substituted with halogen, and
10 (5) -NH-C₁₋₆alkyl, or -N(C₁₋₆alkyl)(C₁₋₆alkyl), which is unsubstituted or substituted with halogen.

10. The compound of Claim 9 wherein R^{2c} is hydrogen, and R^{2a} and R^{2b} are
independently selected from the group consisting of:

- 15 (1) hydrogen,
(2) chloro,
(3) fluoro,
(4) bromo,
(5) methoxy,
20 (6) t-butoxy,
(7) difluoromethyl, and
(8) trifluoromethyl.

11. The compound of Claim 1 wherein R³ is C₁₋₆alkyl.

12. The compound of Claim 11 wherein R³ is methyl.

13. A compound which is selected from the group consisting of:

5-[(3-fluorophenoxy)methyl]-2-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidine;
30 (2R,5R)-5-[(3-fluorophenoxy)methyl]-2-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidine;

- 2-({(3S,6R)-6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl}methyl)-1,3-benzothiazole;
- 30 N-(4-fluorophenyl)-2-({6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl}acetamide);
- N-(4-fluorophenyl)-2-({(3R,6R)-6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl}acetamide);

N-(4-fluorophenyl)-2-[(3S,6S)-6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl]acetamide;

N-(4-fluorophenyl)-2-[(3R,6S)-6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl]acetamide;

5 N-(4-fluorophenyl)-2-[(3S,6R)-6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl]acetamide;

1-[(6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl)acetyl]-1,2,3,4-tetrahydroquinoline;

10 1-[(3R,6R)-6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl)acetyl]-1,2,3,4-tetrahydroquinoline;

1-[(3S,6S)-6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl)acetyl]-1,2,3,4-tetrahydroquinoline;

1-[(3R,6S)-6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl)acetyl]-1,2,3,4-tetrahydroquinoline;

15 1-[(3S,6R)-6-methyl-1-[5-methyl-2-(2H-1,2,3-triazol-2-yl)benzoyl]piperidin-3-yl)acetyl]-1,2,3,4-tetrahydroquinoline;

or a pharmaceutically acceptable salt thereof.

20 14. A pharmaceutical composition which comprises an inert carrier and a compound of Claim 1 or a pharmaceutically acceptable salt thereof.

15. A compound of Claim 1 or a pharmaceutically acceptable salt thereof for use in medicine.

25 16. Use of a compound of Claim 1, or a pharmaceutically acceptable salt thereof, for the manufacture of a medicament for the treatment or prevention of a sleep disorder.

30 17. A method for enhancing the quality of sleep in a mammalian patient in need thereof which comprises administering to the patient a therapeutically effective amount of the compound of Claim 1 or a pharmaceutically acceptable salt thereof.

18. A method for treating insomnia in a mammalian patient in need thereof which comprises administering to the patient a therapeutically effective amount of the compound of Claim 1 or a pharmaceutically acceptable salt thereof.

35

19. A method for treating or controlling obesity in a mammalian patient in need thereof which comprises administering to the patient a therapeutically effective amount of the compound of Claim 1 or a pharmaceutically acceptable salt thereof.

INTERNATIONAL SEARCH REPORT

International application No.

PCT/US 09/60736

A. CLASSIFICATION OF SUBJECT MATTER
 IPC(8) - C07D 413/00; C07D 413/02 (2009.01)
 USPC - 540/596; 544/124; 544/141; 544/360

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
 USPC: 540/596; 544/124; 544/141; 544/360

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched
 USPC: 540/596; 544/124; 544/141; 544/360 (text search)

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
 PubWEST (PGPB,USPT,EPAB,JPAB), Google Scholar, DialogWEB
 Search terms used: piperidine, N-benzoyl, N-aryl, orexin receptor antagonist, phenoxymethyl, sleep disorders, insomnia, obesity

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
Y	WO 2006/117669 A1 (FUNK et al.) 09 November 2006 (09.11.2006), pg 2, ln 5-pg 3, ln 23	1-19
Y	US 2004/0192673 A1 (GAILLARD et al.) 30 September 2004 (30.09.2004), para [0009]-[0018], [0030], [0033], [0038], [0110], [0118]-[0120], [0144], [0146], [0148], [0150]-[0151]	1-19
Y	WO 2008/065626 A2 (ASSAOUI et al.) 05 June 2008 (05.06.2008), pg 1, ln 3-7; pg 2, ln 9-22	1-19

☐ Further documents are listed in the continuation of Box C.

* Special categories of cited documents:	"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"A" document defining the general state of the art which is not considered to be of particular relevance	"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"E" earlier application or patent but published on or after the international filing date	"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)	"&" document member of the same patent family
"O" document referring to an oral disclosure, use, exhibition or other means	
"P" document published prior to the international filing date but later than the priority date claimed	

Date of the actual completion of the international search
 30 November 2009 (30.11.2009)

Date of mailing of the international search report

23DEC 2009
