David Warren

Letters Patent

9065X

The Schedule referred to in these Letters Patent and making part of the same containing a description in the words of the said David Warren himself of his improvement in the washing Machine.

To all to whom these presents shall come. Be it known that I David Warren of Winthrop in the County of Kennebec & State of Maine have invented a new and useful improvement in the washing Machine and that the following is a full and exact description of the construction and operation of the said machine as invented or improved by me. reference being made to the accompanying plate. A. is a cistern made of any required dimensions. B. B. are arms to the bottom of which are attached common stocks. C C. are arms which are connected with the double crank D. on this crank is placed a pinion E. which fits into the cog wheel F. this cog wheel is moved by the crank G. another construction or modification which I sometimes adopt is the following. I put the crank D. immediately thro' the arms B. B. dispensing with the other apparatus. The usual method of operating however is to turn the crank G. which propels the pinion E. and the crank D. and these by the stocks B. B. Claim. What I claim as my improvement is

1 The application of the gear work to the stocks as above described.

2. putting the crank directly through the arms of the stocks. In testimony that the above is a true specification of my said improvement as above described I have hereunto set my hand this 30th day of July 1835.
