(57) **ABSTRACT**

A new and distinct *Medinilla* sp. plant named 'ROYAL ZENZ', characterized by an erect shrub plant, measuring about 20 cm in total height (when first flowering) and about 50 cm in diameter; green colored leaves, measuring about 25 cm in length and about 11-13 cm in width; pendulous panicle, measuring about 32 cm in length and about 15 cm in diameter, with red-purple (RHS 68A) flowers.

**2 Drawing Sheets**

**1**

Latin name of the genus and species: *Medinilla* hybrid.  
Variety denomination: 'ROYAL ZENZ'.

**BACKGROUND OF THE INVENTION**

The present invention relates to a new and distinct hybrid cultivar of *Medinilla* plant, botanically known as *medinilla* sp., hereinafter referred to by the cultivar name 'ROYAL ZENZ'. The genus of *Medinilla* belongs to the Melastimataceae family.

The new *Medinilla* 'ROYAL ZENZ' is a product of a planned breeding program conducted by the inventor. Ely Bak and Nico D. M. Steur, in Assendelft, The Netherlands. The objective of the breeding program is to develop a new *Medinilla* variety with good growing habit and attractive inflorescence.

The New *Medinilla* 'ROYAL ZENZ' originated from a cross made in the controlled breeding program by the inventors in 2008, in Assendelft, The Netherlands. The female or seed parent is the *Medinilla* selection designated '834918227' (unpatented), and the male or pollen parent is the *Medinilla* selection designated '834927015' (unpatented). 'ROYAL ZENZ' was discovered and selected by the inventors in 2010, as a single flowering plant within the progeny of the stated cross in a controlled environment in Assendelft, The Netherlands.

Asexual reproduction of the new *Medinilla* hybrid 'ROYAL ZENZ' performed by vegetative means by cuttings was first performed in 2010, in Assendelft, The Netherlands. The first 'ROYAL ZENZ' plants propagated through the use of the cuttings flowered in 2011, in Assendelft, The Netherlands, and have demonstrated that the combination of characteristics as herein disclosed for the new cultivar are firmly

**2**

fixed and retained through successive generations of asexual reproduction. The new cultivar reproduces true-to-type.

**BRIEF DESCRIPTION OF THE INVENTION**

The following traits have been repeatedly observed and are determined to be unique characteristics of 'ROYAL ZENZ' which in combination distinguish this *Medinilla* hybrid as a new and distinct cultivar:

1. Solid growth habit.
2. Erect shrub plant, measuring about 20 cm in height (above the pot when first flowering);
3. Green colored leaves, measuring about 25 cm in length and about 11-13 cm in width;
4. Pendulous panicles with red-purple (RHS 68A) colored flowers;

**COMMERCIAL COMPARISON**

Of the many commercial cultivars known to the present inventors, the most similar in comparison to the new *Medinilla* 'ROYAL ZENZ' is the *Medinilla* 'MAGNIFICA'. Plants of the new *Medinilla* 'ROYAL ZENZ' differ from plants of *Medinilla* 'MAGNIFICA' primarily in leaf size and bract size. Additionally plants of 'ROYAL ZENZ' have a coloured inflorescence.

**PARENT COMPARISON**

Plants of the new *Medinilla* 'ROYAL ZENZ' differ from plants of the female parent in inflorescence. The new variety

produces more inflorescence per plant. Additionally, inflorescence of the new variety are darker than those of the seed parent.

Plants of the new *Medinilla* 'ROYAL ZENZ' differ from plants of the male parent in plant habit. Plants of the new variety are significantly more compact than plants of the pollen parent.

#### BRIEF DESCRIPTION OF THE PHOTOGRAPHS

The accompanying photograph illustrates the overall appearance of the new *Medinilla* 'ROYAL ZENZ' showing the colors as true as is reasonably possible with colored reproductions of this type. Colors in the photograph may differ slightly from the color values cited in the detailed botanical description which accurately describes the color of 'ROYAL ZENZ'.

FIG. 1 shows a side view perspective of a typical potted flowering plant of 'ROYAL ZENZ' at about 50 weeks from potting.

FIG. 2. shows a side view perspective of a typical flower of 'ROYAL ZENZ' at about 50 weeks from potting.

#### DETAILED BOTANICAL DESCRIPTION

'ROYAL ZENZ' has not been observed under all possible environmental conditions. The phenotype of the new cultivar may vary with variations in environment such as temperature, light intensity, day length, fertilizers and humidity without any change in the genotype of the plant.

The aforementioned photograph, together with the following observations, measurements and values describe the new *Medinilla* 'ROYAL ZENZ' as grown in a greenhouse in Assendelft, The Netherlands, under conditions which closely approximate those generally used in commercial practice.

Color references are made to The Royal Horticultural Society Colour Chart (R.H.S.), 2001 Edition, except where general colors of ordinary significance are used. Color values were taken under daylight conditions in a greenhouse in Assendelft, The Netherlands. The age of the plants of 'ROYAL ZENZ' described is about 50 weeks from potting.

Classification:

*Botanical.*—*Medinilla* sp. 'ZENZ'.

Parentage:

*Female parent.*—*Medinilla* selection designated '834918227' (unpatented).

*Male parent.*—*Medinilla* selection designated '834917015' (unpatented).

Propagation: Cuttings.

Plant:

*General appearance and form.*—Height: About 20 cm. Diameter: About 50 cm. Shape: Erect shrub.

*Growth habit.*—Stem.

*Plant vigor.*—Good.

*Flowering season.*—From April till October.

*Cold tolerance.*—Frost tender, temperatures below 5C may damage plants.

*Fragrance.*—None.

Foliage:

*Quantity.*—About 20.

*Size.*—Length: About 25 cm. Width: About 11-13 cm.

*Overall shape.*—Elliptical.

*Apex shape.*—Cuspidate.

*Base shape.*—Acute.

*Margin.*—Slightly Undulate.

*Texture.*—Smooth.

*Color.*—Leaf color can vary somewhat depending on growing conditions. Upper Surface: Glossy green, ranges between RHS 139A. Lower Surface: Green, closest to RHS 143A.

*Venation.*—Sunken.

Inflorescence:

*Shape.*—Pendulous panicles.

*Amount.*—About 6 (depending on the size of the plant).

*Size.*—Length: About 32 cm. Width: About 15 cm.

*Color.*—Red-purple, closest to RHS 68A.

*Corolla.*—Number: more than 150 per panicle.

*Petals.*—Number: 4 or 5 per flower. Length: 12 mm.

Width: 7 mm. Overall Shape: obovate, asymmetrical.

Apex Shape: obtuse. Color: Upper Surface: red-purple, closest to RHS 155D. Lower Surface: red-purple, closest to RHS 155D. Sepals: growth together.

enclosing the ovary. Color: red-purple, closest to RHS 66D. Bracts: Quantity: 4 per crown. Arrangement: verticillate. Size: Length: about 15 mm-7 cm. Width: less than 6 mm-6 cm. Overall Shape: elliptical.

Reproductive organs:

*Androecium.*—Stamen: Number: 8-10 per flower.

Length: 7 mm. Diameter: 1 mm. Color: light yellow, with a white base (too small to qualify RHS value).

Anther: Length: 10 mm. Color: violet, closest to RHS 88A, with a yellow base (too small to qualify RHS value).

Pollen: not visible. Gynoecium: Pistil: Number: 1 per flower. Length: 14 mm. Stigma: Width: <1 mm. Color: white, too small to qualify RHS value.

Style: Length: 11 mm. Color: White, closest to RHS 155B. Ovary: Shape: round. Position: inferior.

Length: 3 mm. Diameter: 3 mm. Color: white closest to RHS 155C.

Seeds: No seeds produced.  
Fruits: No fruit produced.  
Disease/pest resistance: No observations made to date.  
Disease/pest susceptibility: No observations made to date.

Seeds: No seeds produced.

Fruits: No fruit produced.

Disease/pest resistance: No observations made to date.

Disease/pest susceptibility: No observations made to date.

What is claimed is:

1. A new and distinct *Medinilla* plant named 'ROYAL ZENZ', as illustrated and described herein.
