(54) **UTILISATION DE DERIVES DE TETRAHYDROPYRIDINES (OU 4-HYDROXYPIPERIDINES)-BUTYLAZOLES DANS L'ELABORATION D'UN MEDICAMENT POUR LE TRAITEMENT DE LA DOULEUR**

(54) **UTILIZATION OF DERIVATIVES OF TETRAHYDROPYRIDINES (OR 4-HYDROXYPIPERIDINES)-BUTYLAZOLS IN THE PREPARATION OF A MEDICAMENT FOR THE TREATMENT OF PAIN**

(57) L'invention concerne des utilisations de dérivés de tétrahydropyridines (ou 4-hydroxypipéridines)-butylazoles de formule (I) dans laquelle R_1 , R_2 , R_3 , identiques ou différents, représentent chacun un hydrogène, halogène, alkyle C_1 - C_4 , trifluorométhyle, hydroxyle, alcoxyle ou deux radicaux adjacents peuvent former un cycle; A représente un atome de C et la ligne en pointillé représente une liaison supplémentaire ou A représente un atome de C lié à un groupe hydroxyle et la ligne en pointillé représente une carence de liaison supplémentaire; Z_1 représente N ou CR_4 ; Z_2 représente N ou CR_5 ; Z_4 représente N ou CR_7 et R_4 , R_5 , R_6 , et R_7 , identiques ou différents, représentent un hydrogène, halogène, alkyle C_1 - C_4 , aryle ou aryle substitué ou deux radicaux adjacents peuvent faire partie d'un autre cycle. Ces dérivés sont utiles pour le traitement de la douleur aiguë, de la douleur neuropathique ou de la douleur nociceptive chez les mammifères, y compris l'homme.

(57) Derivatives of tetrahydropyridines (or 4-hydroxypiperidines)-butylazols of formula (I), wherein R_1 , R_2 and R_3 , which are similar or different, represent each of them hydrogen, halogen, alkyl C_1 - C_4 , trifluoromethyl, hydroxyl, alkoxy, or two adjacent radicals can form a ring; A is a C atom and the dotted line represents an additional bond, or A is a C atom joined to a hydroxyl group and the dotted line represents absence of additional bond; Z_1 is N or CR_4 ; Z_2 is N or CR_5 ; Z_4 is N or CR_7 ; and R_4 , R_5 , R_6 and R_7 , which are similar or different, represent hydrogen, halogen, alkyl C_1 - C_4 , aryl or substituted aryl, or two adjacent radicals can form part of another ring. These derivatives are useful for the treatment of acute pain, neuropathic pain or nociceptive pain in mammals, including human beings.

Use of derivatives of tetrahydropyridine (or 4-hydroxypiperidine)-butylazoles in the preparation of a medicament for the treatment of pain

5

ABSTRACT

10 The derivatives of tetrahydropyridines (or 4-hydroxypiperidines)-butylazoles (I), wherein R_1 , R_2 and R_3 are either identical or different and represent a hydrogen atom, a C_1 - C_4 alkyl group, a trifluoromethyl radical, a hydroxyl or alkoxy radical, or, two adjacent radicals can form part of a ring; A represents a C atom and the dotted line represents an additional bond, or A represents a C atom bound to a hydroxyl group and the dotted line represents lack of an additional bond; Z_1 is N or CR_4 ; Z_2 is N or CR_5 ; Z_4 is N or CR_7 ; and R_4 , R_5 , R_6 and R_7 , which can be equal or different, represent
15 hydrogen, halogen, C_1 - C_4 alkyl, aryl or substituted aryl, or two adjacent radicals can form part of another ring, are useful for the treatment of acute pain, neuropathic pain or nociceptive pain in mammals, including man.

Use of derivatives of tetrahydropyridine (or 4-hydroxyperidine)-butylazoles in the preparation of a medicament for the treatment of pain

5 Field of the Invention

The present invention relates to the use of derivatives of tetrahydropyridines (or 4-hydroxypyperidines)butylazoles of general formula (I), as well as their physiologically acceptable salts, in the preparation of medicaments useful in human and/or veterinary therapy for the treatment of acute pain, neuropathic pain and nociceptive pain, either alone or in combination with other analgesics, producing in this case a synergy.

Background of the invention

15 In our patent application WO 96/04287 compounds of general formula (I) are disclosed

that have an affinity for the σ and 5HT_{1A} receptors, and which are claimed as medicaments useful for the treatment of anxiety, psychosis, epilepsy, convulsion, amnesia, cerebro-vascular diseases and senile dementia.

We have now discovered that the compounds of general formula (I), as well as their pharmaceutically acceptable salts, are especially useful for the preparation of medicaments, useful in human and/or veterinary therapy for the prophylaxis, alleviation or curing of acute pain, neuropathic pain and nociceptive pain, either alone or in combination with other analgesics, giving rise in this case to a synergy.

Detailed description of the invention

The present invention relates to the use of derivatives of tetrahydropyridines (or 4-hydroxypyperidine)butylazoles of general formula

5 where

R_1 , R_2 and R_3 are either identical or different and represent a hydrogen atom, a C_1 - C_4 alkyl group, a trifluoromethyl radical, a hydroxyl or alkoxy radical, and furthermore, two adjacent radicals can form part of an six-member aromatic ring;

10 A represents a carbon atom and the dotted line represents an additional bond, or A represents a carbon atom bound to a hydroxyl group (C-OH) and the dotted line represents the lack of an additional bond;

15 Z_1 represents a nitrogen atom or a substituted carbon atom that can be represented by C- R_4 ;

Z_2 represents a nitrogen atom or a substituted carbon atom that can be represented by C- R_5 ;

Z_4 represents a nitrogen atom or a substituted carbon atom that can be represented by C- R_7 ;

20 with the condition that Z_1 , Z_2 and Z_4 taken together can represent, at most, two nitrogen atoms; and

25 R_4 , R_5 , R_6 and R_7 , are identical or different and represent a hydrogen atom, a halogen atom, a C_1 - C_4 alkyl group, an aryl or substituted aryl group, or two adjacent radicals can form part of a six-member aromatic ring;

or one of their physiologically acceptable salts,

in the elaboration of a medicament for the treatment of acute pain, neuropatic pain or nociceptive pain in mammals, including man.

The term "a halogen atom" represents a fluorine, chlorine or bromine atom.

5 The term "aryl or substituted aryl" represents a phenyl radical or a phenyl radical substituted by halogen.

The term "alkoxyl" represents a methoxyl or ethoxyl radical.

10 The term "C₁-C₄ alkyl" represents a straight chain or branched radical that is based on a saturated hydrocarbon of 1 to 4 atoms of carbon, such as methyl, ethyl, propyl, , isopropyl, butyl, isobutyl, sec-butyl y *terc*-butyl for example.

15 Physiologically acceptable salts of the compounds of general formula (I) refer both to salts formed with inorganic acids and organic acids, in particular, to salts of hydrochloric acid, hydrobromic acid, sulphuric acid, phosphoric acid, acetic acid, lactic acid, malonic acid, succinic acid, glutaric acid, fumaric acid, malic acid, tartaric acid, citric acid, ascorbic acid, maleic acid, benzoic acid, phenylacetic acid, cinamic acid, salicylic acid and alkyl, cycloalkyl or arylsulphonic acids.

20 The use of derivatives of general formula (I) for the treatment of pain refers to the use of analgesics in clinical practice. The term acute pain includes, but is not limited to, headache, arthritis, muscular tension or dysmenorrhea. The term neuropathic pain includes, but is not limited to, chronic back pains, pain associated with arthritis, herpes, pain associated with cancer, pain of a phantom limb, pain during childbirth or neuropathic pain resistant to opioids. The term nociceptive pain includes, but is not limited to, post-operation pain, dental pain, pain arising from surgery, pain caused by serious burns, post-natal pain or pain related with the genitourinary tract.

The derivatives of general formula (I) can be prepared according to the procedures disclosed in our patent application WO 96/04287.

30 In human therapy, the dosage administered of the compounds of the present invention varies as a function of the seriousness of the affliction to be treated. Normally the dosage will lie between 1 and 100 mg/day. The compounds of the invention can be administered as the only active ingredient

or in conjunction with another analgesic in a proportion of one part of compound of general formula (I) with around one to ten parts of the other analgesic, with the aim of provoking a synergy. Other analgesics include, but are not limited to, non-steroid anti-inflammatory compounds such as aspirin or indomethacine, other analgesics such as paracetamol, narcotic analgesics or related compounds such as morphine, meperidine or pentazocine. The compounds of the invention, with a suitable pharmaceutical formulation, are administered by different routes, such as orally, transdermically, parenterally, subcutaneously, intranasally, intramuscularly or intravenously. Pharmaceutical compositions that contain compounds of general formula (I) are disclosed in our patent application WO 96/04287.

Illustrative examples of compounds included in the scope of the present invention include compounds that are characterised by the data indicated in tables 1 and 2.

EBiological assays

The analgesic activity of the products object of the invention have been studied in several assays using the Swiss albino mice as the experimental animal. The assay of contortions induced by phenylbenzoquinone, the hot-plate assay and the hot-point assay are now described. The examples that are presented by way of illustration describe some of the pharmacological assays and should not limit the scope of the invention in any way.

The assay of contortions induced by phenylbenzoquinone was carried out following the method described by E. Siegmund *et al.* (Proc. Soc. Exp. Biol. Med. 95 : 729-731, 1957). In this assay the mice received the product orally or sub-cutaneously (s.c.) and after 60 minutes (after oral administration) or after 30 minutes (after s.c. administration) they received an intraperitoneal (i.p.) injection of an 0.02% aqueous solution of phenylbenzoquinone, at a dosage of 10 ml/kg. The degree of analgesic was expressed as a percentage of the contortions with respect to the control group at each one of the dosages assayed. Using the results obtained the effective dose-50 (ED-50) was calculated, that is to say the dose able to inhibit by 50% the contortions induced by phenylbenzoquinone.

The hot-plate assay was carried out following the method described by M. Ocaña *et al.* (Europ.J.Pharmacol. 186 : 377-378, 1990). The product under study was administered s.c. or i.p. and 30 minutes later the analgesic effect was registered. For this the animals were placed on a metallic surface kept at 50° C or 55° C and the time registered (latency) until the licked their hind legs and a jump. The analgesic activity was calculated at each dose, comparing the potency of the treated group with the control group. Using the results obtained the ED-50 was calculated.

The assay of withdrawal of the tail from a hot spot (tail flick) was carried out following the method described by M. Ocaña *et al.* (Br. J. Pharmacol. 110 : 1049-1054, 1993). The mice were introduced into an immobiliser and placed on the tail-flick apparatus (LI7100, Letica, S.A). A beam of light was focussed on the tail, at 4 cm from the tip, and the latency

for withdrawal of the tail automatically registered. Ten minutes before administering the product of the study the basal latency was registered. After the product had been administered s.c. the tail withdrawal latencies at 10, 20, 30, 40, 45, 60, 90 and 120 minutes were registered. For each
5 animal the area below curve of the latency was calculated during the time period following the method described by R.J. Tallarida and R.B. Murray (Manual of pharmacologic calculations with computer programs, Springer-Verlag, Berlin, p. 297, 1987). The degree of analgesic of each dosage was calculated comparing the area under curve of latency of the group treated
10 with the medicament with the control group. Using these data the ED-50 was calculated.

The products object of the invention have a notable analgesic activity in the assay of contortions induced by phenylbenzoquinone. Several products have activity of the same order as morphine and clearly
15 better than the products that inhibit biosynthesis of prostaglandins, such as aspirin and dipirone (see table 3).

The analgesic activity has also been demonstrated in the hot-plate assay, considered as a demonstration of analgesic action at the central nervous system level (see table 4).

20 The analgesic activity has also been demonstrated in the hot-beam assay applied to the mouse's tail, finding a good correspondence between the results obtained in the assay of the hot-plate and the assay of the calorific beam (see table 5).

Furthermore, the capacity of the products object of the invention for
25 exhibiting synergistic analgesic activity with other analgesics, for example, pentazocine, has also been demonstrated. This has been shown for the compound of example 47a (see table 6). Effectively, the latency time in responding licking of the paws when the mice were placed on the hot-plate at 55° C, is much greater after the combined treatment with the compound
30 of example 47a and pentazocine than the sum of the latencies of each one of the treatments carried out separately.

In summary, the products object of the invention have shown a clear analgesic activity in different assays, such as phenylbenzoquinone, hot-

plate and calorific beam applied to the tail of the mouse. The activity of these products has been clearly superior to that of the inhibitors of the biosynthesis of prostaglandins such as aspirin and dipirone, and the activity has been shown to be of the order of that of morphine. Furthermore, the capacity for forming synergistic combinations with other analgesics has been demonstrated, as can be seen for the case of the compound of example 47a administered along with pentazocine in the hot-plate assay for mice.

CLAIMS

1. Use of a derivative of tetrahydropyridine (or 4-hydroxypiperidine)butylazole of general formula (I)

5

where

R_1 , R_2 and R_3 are either identical or different and represent a hydrogen atom, a C_1 - C_4 alkyl group, a trifluoromethyl radical, a hydroxyl or alkoxy radical, and furthermore, two adjacent radicals can form part of an six-member aromatic ring;

10

A represents a carbon atom and the dotted line represents an additional bond, or A represents a carbon atom bound to a hydroxyl group (C-OH) and the dotted line represents the lack of an additional bond;

15

Z_1 represents a nitrogen atom or a substituted carbon atom that can be represented by C- R_4 ;

Z_2 represents a nitrogen atom or a substituted carbon atom that can be represented by C- R_5 ;

20

Z_4 represents a nitrogen atom or a substituted carbon atom that can be represented by C- R_7 ;

with the condition that Z_1 , Z_2 and Z_4 taken together can represent, at most, two nitrogen atoms; and

25

R_4 , R_5 , R_6 and R_7 , are identical or different and represent a hydrogen atom, a halogen atom, a C_1 - C_4 alkyl group, an aryl or substituted aryl group, or two adjacent radicals can form part of a six-member aromatic ring;

or physiologically acceptable salts thereof,

in the preparation of a medicament for the treatment of acute pain, neuropathic pain or nociceptive pain in mammals, including man.

2. Use according to claim 1, of a compound of general formula (I), wherein
5 R₁, R₂ and R₃ are chosen from a hydrogen atom, a fluorine atom, a chlorine atom, a bromine atom, a trifluoromethyl radical, a hydroxyl radical, a methoxyl radical, a methyl radical, an ethyl radical, a propyl radical, an *isopropyl* radical, a *sec*-butyl radical and a *terc*-butyl radical, or a physiologically acceptable salt thereof, in the
10 preparation of a medicament for the treatment of acute pain, neuropathic pain or nociceptive pain in mammals, including man.

3. Use according to claim 1, of a compound of general formula (I), wherein
R₁, R₂ and R₃ are chosen in such a way that two adjacent radicals can form part of
a six-member aromatic ring, or a physiologically acceptable salt thereof, in the
15 preparation of a medicament for the treatment of acute pain, neuropathic pain or nociceptive pain in mammals, including man.

4. Use according to claim 1, of a compound of general formula (I), wherein
R₄, R₅, R₆ and R₇ are chosen from a hydrogen atom, a fluorine atom, a chlorine
20 atom, a bromine atom, a trifluoromethyl radical, a hydroxyl radical, a methoxyl radical, a methyl radical, an ethyl radical, a propyl radical, an *isopropyl* radical, a *sec*-butyl radical and a *terc*-butyl radical, a phenyl radical, a phenyl radical substituted by a halogen atom, or a physiologically acceptable salt thereof, in the
preparation of a medicament for the treatment of acute pain, neuropathic pain or
25 nociceptive pain in mammals, including man.

5. Use according to claim 1, of a compound of general formula (I), wherein
R₄, R₅, R₆ and R₇ are chosen in such a way that two adjacent radicals can form
part of a six-member aromatic ring, or a physiologically acceptable salt thereof, in
30 the preparation of a medicament for the treatment of acute pain, neuropathic pain or nociceptive pain in mammals, including man.

6. Use according to claim 1, of a compound of general formula (I), chosen from the group formed by:

- [1] 4-chloro-1-[4-(4-hydroxy-4-phenyl-1-piperdiny]butyl]-1*H*-pirazole
- [2] 4,5-dichloro-1-[4-(4-hydroxy-4-phenyl-1-piperdiny]butyl]-2-methyl-

- [73] 1-{4-[4-phenyl-1-(1,2,3,6-tetrahydropyridinyl)]butyl}-1*H*-pyrrol.
- [74] 4-(4-chlorophenyl)-1-[4-(4-hydroxy-4-phenyl-1-piperdiny)]butyl}-1*H*-pirazole.
- [75] 1-{4-[4-(4-fluorophenyl)-4-hydroxy-1-piperdiny)]butyl}-1*H*-benzimidazole.
- 30 [76] 4-chloro-1-{4-[4-hydroxy-4-(3-trifluoromethylphenyl)-1-piperdiny)]butyl}-1*H*-pirazole.
- [77] 1-{4-[4-(4-fluorophenyl)-4-hydroxy-1-piperdiny)]butyl}-1*H*-indazole.
- [78] 2-{4-[4-(4-fluorophenyl)-4-hydroxy-1-piperdiny)]butyl}-2*H*-indazole.

- [79] 2-{4-[4-(4-fluorophenyl)-4-hydroxy-1-piperdiny]butyl}-2*H* -benzotriazole.
- [80] 1-{4-[4-(4-fluorophenyl)-4-hydroxy-1-piperdiny]butyl}-1*H*-benzotriazole.
- [81] 3-chloro-1-{4-[4-phenyl-1-(1,2,3,6-tetrahydropyridiny)]butyl}-1*H*-indazole.
- [82] 3-chloro-1-{4-[4-phenyl-1-(1,2,3,6-tetrahydropyridiny)]butyl}-1*H*-indazole
5 hydrochloride.
- [83] 1-{4-[4-hydroxy-4-(4-fluorophenyl)-1-piperdiny]butyl}-1*H*-triazole.
- [84] 1-{4-[4-hydroxy-4-(4-chlorophenyl)-1-piperdiny]butyl}-1*H*-triazole.
- [85] 4,5-dichloro-1-{4-[4-(4-hydroxyphenyl)-1-(1,2,3,6-tetrahydropyridiny)]-butyl}-
2-methyl-1*H*-imidazole hydrochloride.
- 10 [86] 4,5-dichloro-1-{4-[4-phenyl-1-(1,2,3,6-tetrahydropyridiny)]-butyl}-1*H*-
imidazole hydrochloride.
- [87] 1-{4-[4-(4-fluorophenyl)-1-(1,2,3,6-tetrahydropyridiny)]butyl}-1*H*-triazole
citrate.
- [88] 1-{4-[4-(4-bromophenyl)-1-(1,2,3,6-tetrahydropyridiny)]butyl}-1*H*-triazole.
- 15 [89] 1-{4-[4-(4-bromophenyl)-1-(1,2,3,6-tetrahydropyridiny)]butyl}-1*H*-triazole
hydrochloride.
- [90] 1-{4-[4-(4-chlorophenyl)-1-(1,2,3,6-tetrahydropyridiny)]butyl}-1*H*-triazole.
- [91] 1-{4-[4-(4-chlorophenyl)-1-(1,2,3,6-tetrahydropyridiny)]butyl}-1*H*-triazole
hydrochloride.
- 20 [92] 2-phenyl-1-{4-[4-(4-chlorophenyl)-1-(1,2,3,6-tetrahydropyridiny)]-butyl}-1*H*-
imidazole.
- [93] 2-phenyl-1-{4-[4-(4-chlorophenyl)-1-(1,2,3,6-tetrahydropyridiny)]-butyl}-1*H*-
imidazole hydrochloride.
- [94] 2,5-dimethyl-1-{4-[4-phenyl-1-(1,2,3,6-tetrahydropyridiny)]butyl}-1*H*-pyrrol.
- 25 [95] 2,5-dimethyl-1-{4-[4-phenyl-1-(1,2,3,6-tetrahydropyridiny)]butyl}-1*H*-pyrrol
hydrochloride.
- [96] 2,5-dimethyl-1-{4-[4-(4-chlorophenyl)-1-(1,2,3,6-tetrahydropyridiny)]butyl}-
1*H*-pyrrol.
- [97] 2,5-dimethyl-1-{4-[4-(4-chlorophenyl)-1-(1,2,3,6-tetrahydropyridiny)]butyl}-
30 1*H*-pyrrol hydrochloride.
- [98] 1-{4-[4-(4-chlorophenyl)-1-(1,2,3,6-tetrahydropyridiny)]butyl}-1*H*-pyrrol.
- [99] 1-{4-[4-(4-chlorophenyl)-1-(1,2,3,6-tetrahydropyridiny)]butyl}-1*H*-pyrrol
hydrochloride.

[100] 1-{4-[4-(4-chlorophenyl)-1-(1,2,3,6-tetrahydropyridinyl)]butyl}-1H-triazole hydrochloride.

in the preparation of a medicament for the treatment of acute pain, neuropathic pain or nociceptive pain in mammals, including man.

5

7. Use according to claim 1, of a compound of general formula (I), or a physiologically acceptable salt thereof, along with another analgesic of those normally used in the treatment of pain, in the preparation of a medicament for the treatment of acute pain, neuropathic pain or nociceptive pain in mammals, including man.
