Title: OSTOMY GAS ELIMINATOR

Abstract: An ostomy device (10) including a bag (22), a lid (24), and a vent (26). The lid (24) is replaceably attached to the bag (22), attaches to a site of a stoma (14) of a patient (16), and self-seals to the stoma (14) of the patient (16). The vent (26) is operatively connected to the bag (22), and vents gas (18) emanating from the stoma (14) of the patient (16) to prevent build-up of the gas (18) that could detach the ostomy device (10) from the site of the stoma (14) of the patient (16) and require reattachments that could irritate skin (20) of the patient (16) at the site of the stoma (14) of the patient (16).
