(54) Title: ROUTINE ESTIMATION

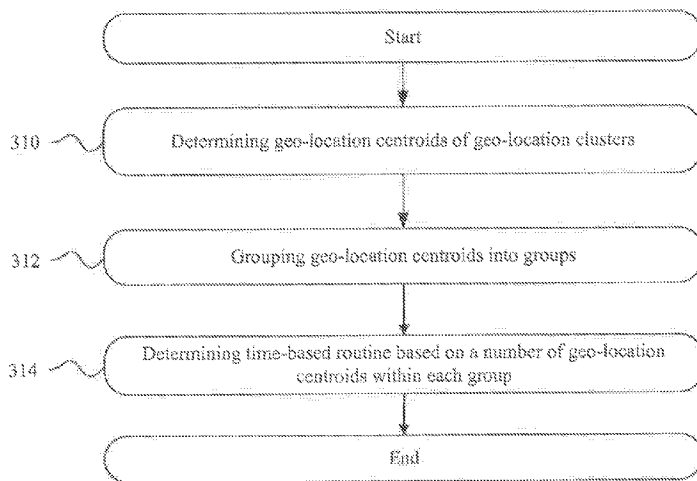

Figure 6 of 11

(57) Abstract: In one embodiment, a method includes determining a geo-location centroid of each of one or more geo-location clusters. The geo-location centroid corresponds to one or more geo-location data points within its geo-location cluster. The geo-location data points represent one or more location readings from a mobile computing device associated with a user. The geo-location centroids are based at least in part on location readings obtained during a particular time of day of a particular day of a week. The method also includes grouping one or more geo-location centroids into one or more groups; and determining a time-based routine based at least in part on a number of geo-location centroids within each group.

* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
