(54) **Title:** INTERFACE FOR ASSISTING IN THE CONSTRUCTION OF SEARCH QUERIES

(57) **Abstract:** A method of assisting a user in their search of the internet or other network. The user selects content from a set of search results at which time a graphical interface is presented to the user. By interacting with the presented interface the user relays their intent regarding the selected content, which is then appended to their current search allowing a new set of results to be returned. The user may repeat this process as many times as may be necessary.
