(54) Title: OXADIAZOLE AND THIADIAZOLE COMPOUNDS AND THEIR USE AS NICOTINIC ACETYLCHOLINE RECEPTOR MODULATORS

(I)

termination of abuse of chemical substances.

(57) Abstract: This invention relates to oxadiazolyl and thiadiazolyl derivatives, which are found to be modulators of the nicotinic acetylcholine receptors. Due to their pharmacological profile the compounds of the invention may be useful for the treatment of diseases or disorders as diverse as those related to the cholinergic system of the central nervous system (CNS), the peripheral nervous system (PNS), diseases or disorders related to smooth muscle contraction, endocrine diseases or disorders, diseases or disorders related to neuro-degeneration, diseases or disorders related to inflammation, pain, and withdrawal symptoms caused by the

## OXADIAZOLE AND THIADIAZOLE COMPOUNDS AND THEIR USE AS NICOTINIC ACETYLCHOLINE RECEPTOR MODULATORS

5

### TECHNICAL FIELD

This invention relates to oxadiazolyl and thiadiazolyl derivatives, which are found to be modulators of the nicotinic acetylcholine receptors. Due to their pharmacological profile the compounds of the invention may be useful for the  
10 treatment of diseases or disorders as diverse as those related to the cholinergic system of the central nervous system (CNS), the peripheral nervous system (PNS), diseases or disorders related to smooth muscle contraction, endocrine diseases or disorders, diseases or disorders related to neuro-degeneration, diseases or disorders related to inflammation, pain, and withdrawal symptoms caused by the termination of  
15 abuse of chemical substances.

### BACKGROUND ART

20 The endogenous cholinergic neurotransmitter, acetylcholine, exerts its biological effect via two types of cholinergic receptors, the muscarinic Acetyl Choline Receptors (mAChR) and the nicotinic Acetyl Choline Receptors (nAChR).

Nicotinic acetylcholine receptors (nAChRs) are pentameric ligand gated ion channels and widely distributed throughout the central (CNS) and peripheral (PNS)  
25 nervous systems. At least 12 subunit proteins, i.e.  $\alpha 2$ - $\alpha 10$  and  $\beta 2$ - $\beta 4$ , have been identified in neuronal tissue. These subunits provide for a great variety of homomeric and heteromeric combinations that account for the diverse receptor subtypes. For example, the predominant receptor that is responsible for high affinity binding of nicotine in brain tissue has composition  $\alpha 4\beta 2$ , while another major population of  
30 receptors is comprised of the homomeric  $\alpha 7$ .

Discovery of the important role played by nAChRs in several CNS disorders has called attention to these membrane proteins and to ligands able to modulate their functions. The existence of different subtypes at multiple levels has complicated the understanding of this receptor's physiological role, but at the same time has increased  
35 the efforts to discover selective compounds in order to improve the pharmacological characterization of this kind of receptor and to make safer the possible therapeutic use of its modulators.

Oxadiazolyl derivatives have been described for use as e.g. plant growth regulators, see e.g. US 3,947,263, for use as herbicides, see e.g. US 3,964,896, and

for use as pesticides, see e.g. WO 98/57969. However, the oxadiazolyl and thiadiazolyl derivatives of the present invention have never been described, or their activity as modulators of the nicotinic receptors certainly never suggested.

5

## SUMMARY OF THE INVENTION

The present invention is devoted to the provision modulators of the nicotinic receptors, which modulators are useful for the treatment of diseases or disorders related to the nicotinic acetylcholine receptor (nAChR).

10

Due to their pharmacological profile the compounds of the invention may be useful for the treatment of diseases or disorders as diverse as those related to the cholinergic system of the central nervous system (CNS), the peripheral nervous system (PNS), diseases or disorders related to smooth muscle contraction, endocrine diseases or disorders, diseases or disorders related to neuro-degeneration, diseases or disorders related to inflammation, pain, and abuse liability and withdrawal symptoms caused by the termination of abuse of chemical substances, in particular nicotine.

15

The compounds of the invention may also be useful as diagnostic tools or monitoring agents in various diagnostic methods, and in particular for *in vivo* receptor imaging (neuroimaging), and they may be used in labelled or unlabelled form.

20

In its first aspect the invention provides an oxadiazole or a thiadiazole derivative of Formula I

any of its isomers or any mixture of its isomers, an N-oxide, a prodrug, or a pharmaceutically-acceptable addition salt thereof, wherein

25

Ar<sup>1</sup> represents a phenyl, pyridinyl, pyridazinyl, pyrimidinyl or pyrazinyl group, which phenyl, pyridinyl, pyridazinyl, pyrimidinyl and pyrazinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, hydroxy, alkoxy, halo, haloalkyl, haloalkoxy, nitro, cyano, acetonitrile, amino-carbonyl (carbamoyl) and methylenedioxy;

30

Ar<sup>2</sup> represents alkyl-carbonyl-amino (acetamido), or a phenyl, furanyl, thienyl, isoxazolyl, thiazolyl or pyridinyl group, which phenyl, furanyl, thienyl, isoxazolyl, thiazolyl and pyridinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, halo, haloalkyl, haloalkoxy, nitro and cyano;

35

L may be absent (i.e. represents a single covalent bond) or present, and if present represents a linking group selected from CH<sub>2</sub>, CH<sub>2</sub>CH<sub>2</sub>, S, S-CH<sub>2</sub>, O, O-CH<sub>2</sub>, SO<sub>2</sub> and SO<sub>2</sub>CH<sub>2</sub>; and

X represents O or S.

5 In a second aspect the invention provides pharmaceutical compositions comprising a therapeutically effective amount of the oxadiazole derivative of the invention, or a pharmaceutically-acceptable addition salt thereof, together with at least one pharmaceutically-acceptable carrier or diluent.

10 Viewed from another aspect the invention relates to the use of the oxadiazole derivative of the invention, or a pharmaceutically-acceptable addition salt thereof, for the manufacture of pharmaceutical compositions/medicaments for the treatment, prevention or alleviation of a disease or a disorder or a condition of a mammal, including a human, which disease, disorder or condition is responsive to modulation of cholinergic receptors.

15 In yet another aspect the invention provides a method for treatment, prevention or alleviation of diseases, disorders or conditions of a living animal body, including a human, which disorder, disease or condition is responsive to modulation of cholinergic receptors, and which method comprises the step of administering to such a living animal body in need thereof a therapeutically effective amount of the oxadiazole  
20 derivative of the invention.

Other objects of the invention will be apparent to the person skilled in the art from the following detailed description and examples.

## DETAILED DISCLOSURE OF THE INVENTION

25

### Oxadiazole derivatives

In its first aspect the invention provides an oxadiazole or a thiadiazole derivative of Formula I

30

any of its isomers or any mixture of its isomers, an N-oxide, a prodrug, or a pharmaceutically-acceptable addition salt thereof, wherein

Ar<sup>1</sup> represents a phenyl, pyridinyl, pyridazinyl, pyrimidinyl or pyrazinyl group, which phenyl, pyridinyl, pyridazinyl, pyrimidinyl and pyrazinyl groups may optionally be substituted one or more times with substituents selected from the group  
35 consisting of alkyl, hydroxy, alkoxy, halo, haloalkyl, haloalkoxy, nitro, cyano, acetonitrile, amino-carbonyl (carbamoyl) and methylenedioxy;

Ar<sup>2</sup> represents alkyl-carbonyl-amino (acetamido), or a phenyl, furanyl, thienyl, isoxazolyl, thiazolyl or pyridinyl group, which phenyl, furanyl, thienyl, isoxazolyl, thiazolyl and pyridinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, halo, haloalkyl, haloalkoxy, nitro and cyano;

L may be absent (i.e. represents a single covalent bond) or present, and if present represents a linking group selected from CH<sub>2</sub>, CH<sub>2</sub>CH<sub>2</sub>, S, S-CH<sub>2</sub>, O, O-CH<sub>2</sub>, SO<sub>2</sub> and SO<sub>2</sub>CH<sub>2</sub>; and

X represents O or S;

provided, however, that the compound is not

*N*-(5-Benzylsulfanyl-[1,3,4]thiadiazol-2-yl)-acetamide;

3-(5-(5-Nitro-furan-2-yl)-[1,2,4]oxadiazol-3-yl)-pyridine;

3-(5-(3-Nitro-phenyl)-[1,2,4]oxadiazol-3-yl)-pyridine; or

2-Acetamido-5-benzylthio-[1,3,4]thiadiazole.

In a preferred embodiment the compound of the invention is represented by Formula I, wherein Ar<sup>1</sup> represents a phenyl, pyridinyl, pyridazinyl, pyrimidinyl or pyrazinyl group, which phenyl, pyridinyl, pyridazinyl, pyrimidinyl and pyrazinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, hydroxy, alkoxy, halo, haloalkyl, haloalkoxy, nitro, cyano, acetonitrile, amino-carbonyl (carbamoyl) and methylenedioxy.

In a more preferred embodiment Ar<sup>1</sup> represents a phenyl, pyridinyl, pyridazinyl, pyrimidinyl or pyrazinyl group, which phenyl, pyridinyl, pyridazinyl, pyrimidinyl and pyrazinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, hydroxy, alkoxy, halo, nitro, cyano, acetonitrile, amino-carbonyl (carbamoyl) and methylenedioxy.

In an even more preferred embodiment Ar<sup>1</sup> represents a pyridinyl, pyridazinyl, pyrimidinyl or pyrazinyl group, which pyridinyl, pyridazinyl, pyrimidinyl and pyrazinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, hydroxy, alkoxy, halo, nitro, cyano, acetonitrile, amino-carbonyl (carbamoyl) and methylenedioxy.

In a still more preferred embodiment Ar<sup>1</sup> represents a pyridinyl, pyridazinyl, pyrimidinyl or pyrazinyl group, which phenyl, pyridinyl, pyridazinyl, pyrimidinyl and pyrazinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, in particular methyl, and halo, in particular fluoro or chloro.

In another more preferred embodiment Ar<sup>1</sup> represents a phenyl, pyridinyl, pyridazinyl or pyrazinyl group, which phenyl, pyridinyl, pyridazinyl and pyrazinyl groups may optionally be substituted one or more times with substituents selected

from the group consisting of alkyl, hydroxy, alkoxy, halo, haloalkyl, haloalkoxy, nitro, cyano, acetonitrile and amino-carbonyl (carbamoyl).

In an even more preferred embodiment Ar<sup>1</sup> represents a phenyl, pyridinyl, pyridazinyl or pyrazinyl group, which phenyl, pyridinyl, pyridazinyl and pyrazinyl  
5 groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, hydroxy, alkoxy, halo, nitro, cyano, acetonitrile and amino-carbonyl (carbamoyl).

In a still more preferred embodiment Ar<sup>1</sup> represents phenyl, optionally substituted one or more times with substituents selected from the group consisting of  
10 alkyl, hydroxy, alkoxy, halo, nitro, cyano, acetonitrile, amino-carbonyl (carbamoyl) and methylenedioxy.

In a yet more preferred embodiment Ar<sup>1</sup> represents phenyl, optionally substituted one or more times with substituents selected from the group consisting of alkyl, hydroxy, alkoxy, halo, nitro, cyano, acetonitrile and amino-carbonyl (carbamoyl).

15 In a further more preferred embodiment Ar<sup>1</sup> represents phenyl, optionally substituted with nitro, cyano, acetonitrile or amino-carbonyl (carbamoyl).

In a still further more preferred embodiment Ar<sup>1</sup> represents phenyl, optionally substituted two times with substituents selected from the group consisting of alkyl, hydroxy, halo, and cyano.

20 In a still further more preferred embodiment Ar<sup>1</sup> represents phenyl, optionally substituted three times with substituents selected from the group consisting of alkoxy, and halo.

In a still further more preferred embodiment Ar<sup>1</sup> represents phenyl, 3-fluoro-phenyl, 3-nitro-phenyl, 3-cyano-phenyl, 4-chloro-phenyl, 4-cyano-phenyl, 4-cyano-3-  
25 alkyl-phenyl, 3-cyano-4-alkyl-phenyl, 3-acetonitrile-phenyl, 5-chloro-2-hydroxy-phenyl, 5-trifluoromethyl-2-chloro-phenyl, 3-carbamoyl-phenyl, 4,6-dimethoxy-3-chloro-phenyl or 3,4-ethylenedioxy-phenyl.

In a still further more preferred embodiment Ar<sup>1</sup> represents phenyl, 3-nitro-phenyl, 3-cyano-phenyl, 4-cyano-3-alkyl-phenyl, 3-cyano-4-alkyl-phenyl, 3-  
30 acetonitrile-phenyl, 5-chloro-2-hydroxy-phenyl, 5-trifluoromethyl-2-chloro-phenyl, 3-carbamoyl-phenyl, 4,6-dimethoxy-3-chloro-phenyl, pyridin-3-yl, pyridazin-3-yl, 6-chloro-pyridazin-3-yl or pyrazin-2-yl.

In a still further more preferred embodiment Ar<sup>1</sup> represents a phenyl group.

In a still further more preferred embodiment Ar<sup>1</sup> represents a pyridinyl  
35 group, in particular pyridin-3-yl, optionally substituted one or more times with alkyl, in particular methyl, and/or halo, in particular fluoro or chloro.

In a still further more preferred embodiment Ar<sup>1</sup> represents pyridin-3-yl, 6-fluoro-pyridin-3-yl, 2-fluoro-pyridin-3-yl, 6-chloro-pyridin-3-yl, 6-methyl-pyridin-3-yl, 2,5-difluoro-pyridin-3-yl, 2,6-difluoro-pyridin-3-yl or 2,5,6-trifluoro-pyridin-3-yl.

In a still further more preferred embodiment Ar<sup>1</sup> represents a pyridinyl group, in particular pyridin-3-yl.

In a still further more preferred embodiment Ar<sup>1</sup> represents 6-fluoro-pyridin-3-yl, 2-fluoro-pyridin-3-yl, 6-chloro-pyridin-3-yl or 6-methyl-pyridin-3-yl.

5 In a still further more preferred embodiment Ar<sup>1</sup> represents 2,5-difluoro-pyridin-3-yl, 2,6-difluoro-pyridin-3-yl or 2,5,6-trifluoro-pyridin-3-yl.

In a still further more preferred embodiment Ar<sup>1</sup> represents a pyridazinyl group, in particular pyridazin-3-yl, optionally substituted with halo, in particular chloro.

In a still further more preferred embodiment Ar<sup>1</sup> represents 6-chloro-  
10 pyridazin-3-yl.

In a still further more preferred embodiment Ar<sup>1</sup> represents a pyrimidinyl group, in particular pyrimidin-5-yl.

In a still further more preferred embodiment Ar<sup>1</sup> represents a pyrazinyl group, in particular pyridazin-3-yl.

15 In another preferred embodiment the compound of the invention is represented by Formula I, wherein Ar<sup>2</sup> represents alkyl-carbonyl-amino (acetamido), or a phenyl, furanyl, thienyl, isoxazolyl, thiazolyl or pyridinyl group, which phenyl, furanyl, thienyl, isoxazolyl, thiazolyl and pyridinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, halo,  
20 haloalkyl, haloalkoxy, nitro and cyano.

In a more preferred embodiment Ar<sup>2</sup> represents alkyl-carbonyl-amino (acetamido), or a phenyl, furanyl, thienyl, isoxazolyl, thiazolyl or pyridinyl group, which phenyl, furanyl, thienyl, isoxazolyl, thiazolyl and pyridinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of  
25 alkyl, in particular methyl, halo, in particular fluoro, chloro or bromo, haloalkyl, in particular trifluoromethyl, nitro and cyano.

In another more preferred embodiment Ar<sup>2</sup> represents a phenyl, furanyl, thienyl, isoxazolyl, thiazolyl or pyridinyl group, which phenyl, furanyl, thienyl, isoxazolyl, thiazolyl and pyridinyl groups may optionally be substituted one or more  
30 times with substituents selected from the group consisting of alkyl, in particular methyl, halo, in particular fluoro, chloro or bromo, haloalkyl, in particular trifluoromethyl, nitro and cyano.

In an even more preferred embodiment Ar<sup>2</sup> represents alkyl-carbonyl-amino (acetamido), or a phenyl, furanyl, thienyl, isoxazolyl or pyridinyl group, which phenyl, furanyl, thienyl, isoxazolyl and pyridinyl groups may optionally be substituted one or  
35 more times with substituents selected from the group consisting of alkyl, halo, trifluoromethyl, trifluoromethoxy, nitro and cyano.

In a still more preferred embodiment Ar<sup>2</sup> represents alkyl-carbonyl-amino.

In a yet more preferred embodiment Ar<sup>2</sup> represents acetamido.

In another more preferred embodiment  $Ar^2$  represents a phenyl, furanyl, thienyl, isoxazolyl or pyridinyl group, which phenyl, furanyl, thienyl, isoxazolyl and pyridinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, halo, trifluoromethyl, trifluoromethoxy, nitro  
5 and cyano.

In an even more preferred embodiment  $Ar^2$  represents phenyl, optionally substituted one or two times with substituents selected from the group consisting of alkyl, halo, trifluoromethyl, nitro and cyano.

In a further more preferred embodiment  $Ar^2$  represents acetamido, phenyl,  
10 3-cyano-phenyl, 5-chloro-2-hydroxy-phenyl, 5-trifluoromethyl-2-chloro-phenyl, isoxazolyl, 5-methyl-isoxazol-3-yl or pyridinyl.

In a still further more preferred embodiment  $Ar^2$  represents phenyl, 3-cyano-phenyl, 5-chloro-2-hydroxy-phenyl, 5-trifluoromethyl-2-chloro-phenyl, isoxazolyl, 5-methyl-isoxazol-3-yl or pyridinyl.

15 In a still further more preferred embodiment  $Ar^2$  represents 3-cyano-phenyl, 4-methyl-3-bromo-phenyl, 5-chloro-2-hydroxy-phenyl, 5-trifluoromethyl-2-chloro-phenyl, 5-methyl-isoxazol-3-yl or pyridinyl.

In a still further more preferred embodiment  $Ar^2$  represents furanyl or thienyl, optionally substituted with nitro, cyano or halo, in particular fluoro or bromo.

20 In a still further more preferred embodiment  $Ar^2$  represents furanyl or thienyl, optionally substituted with nitro or cyano.

In a still further more preferred embodiment  $Ar^2$  represents furanyl, 5-nitro-furan-2-yl; 5-nitro-furan-2-yl, 5-fluoro-furan-2-yl, 5-chloro-furan-2-yl or 5-bromo-furan-2-yl.

25 In a still further more preferred embodiment  $Ar^2$  represents or thienyl, 5-cyano-thien-2-yl, 5-nitro-thien-2-yl, 5-bromo-thien-2-yl.

In a still further more preferred embodiment  $Ar^2$  represents furanyl, in particular furan-2-yl or furan-3-yl, or thienyl, in particular thien-2-yl.

In a still further more preferred embodiment  $Ar^2$  represents isoxazolyl, in  
30 particular isoxazol-3-yl or isoxazol-5-yl, optionally substituted with alkyl, in particular methyl.

In a still further more preferred embodiment  $Ar^2$  represents isoxazol-3-yl, isoxazol-5-yl or 5-methyl-isoxazol-3-yl.

In a still further more preferred embodiment  $Ar^2$  represents pyridinyl, in  
35 particular pyridin-3-yl, optionally substituted one or more times with halo, in particular fluoro or chloro.

In a still further more preferred embodiment  $Ar^2$  represents pyridin-3-yl, 6-fluoro-pyridin-3-yl, 2-fluoro-pyridin-3-yl, 6-chloro-pyridin-3-yl, 6-methyl-pyridin-3-yl, 2,5-difluoro-pyridin-3-yl, 2,6-difluoro-pyridin-3-yl or 2,5,6-trifluoro-pyridin-3-yl.

In a still further more preferred embodiment  $Ar^2$  represents thiazolyl, in particular thiazol-4-yl, optionally substituted with halo, in particular bromo.

In a still further more preferred embodiment  $Ar^2$  represents pyridinyl, in particular pyridin-3-yl.

5 In a still further more preferred embodiment  $Ar^2$  represents acetamido, phenyl, 3-nitro-phenyl, 3-cyano-phenyl, 5-chloro-2-hydroxy-phenyl, 5-trifluoromethyl-2-chloro-phenyl, 4-cyano-3-methyl-phenyl, 3-cyano-4-methyl-phenyl, 3-acetonitrile-phenyl, 3-carbamoyl-phenyl, furan-2-yl, 5-nitro-furan-2-yl, thien-2-yl, 5-cyano-thien-2-yl, isoxazol-3-yl, 5-methyl-isoxazol-3-yl or pyridine-3-yl.

10 In a still further more preferred embodiment  $Ar^2$  represents phenyl, 3-nitro-phenyl, 3-cyano-phenyl, 5-chloro-2-hydroxy-phenyl, 5-trifluoromethyl-2-chloro-phenyl, 4-cyano-3-methyl-phenyl, 3-cyano-4-methyl-phenyl, 3-acetonitrile-phenyl, 3-carbamoyl-phenyl, furan-2-yl, 5-nitro-furan-2-yl, thien-2-yl, 5-cyano-thien-2-yl, isoxazol-3-yl, 5-methyl-isoxazol-3-yl or pyridine-3-yl.

15 In a still further more preferred embodiment  $Ar^2$  represents pyrimidinyl, in particular pyrimidin-5-yl.

In a third preferred embodiment the compound of the invention is represented by Formula I, wherein  $L_1$  and may be absent (i.e. represents a single covalent bond) or present, and if present represents a linking group selected from  
20  $CH_2$ ,  $CH_2CH_2$ , S, S- $CH_2$ , O, O- $CH_2$ ,  $SO_2$  and  $SO_2CH_2$ .

In a more preferred embodiment  $L_1$  is absent (i.e. represents a single covalent bond).

In another more preferred embodiment  $L_1$  is present, and represents a linking group selected from  $CH_2$ ,  $CH_2CH_2$ , S, S- $CH_2$ , O, O- $CH_2$ ,  $SO_2$  and  $SO_2CH_2$ .

25 In an even more preferred embodiment  $L_1$  is present, and represents a linking group selected from S, S- $CH_2$ , and  $SO_2CH_2$ .

In a still more preferred embodiment  $L_1$  represents S.

In a still further more preferred embodiment  $L_1$  represents S- $CH_2$ .

In a still further more preferred embodiment  $L_1$  represents  $SO_2CH_2$ .

30 In a fourth preferred embodiment the compound of the invention is represented by Formula I, wherein X represents O or S.

In a more preferred embodiment X represents O.

In another more preferred embodiment X represents S.

In a fifth preferred embodiment the compound of the invention is  
35 represented by Formula I, wherein  $Ar^1$  represents phenyl, optionally substituted one or more times with substituents selected from the group consisting of alkyl, hydroxy, alkoxy, halo, nitro, cyano, acetonitrile and amino-carbonyl (carbamoyl); and  $Ar^2$  represents acetamido, phenyl, isoxazolyl or pyridinyl substituted once or twice with alkyl, halo, trifluoromethyl and/or cyano.

In a more preferred embodiment Ar<sup>1</sup> represents phenyl, optionally substituted one or more times with substituents selected from the group consisting of alkyl, hydroxy, alkoxy, halo, nitro, cyano, acetonitrile and amino-carbonyl (carbamoyl); and Ar<sup>2</sup> represents phenyl, isoxazolyl or pyridinyl substituted once or twice with alkyl, halo, trifluoromethyl and/or cyano.

In an even more preferred embodiment Ar<sup>1</sup> represents phenyl, 3-nitro-phenyl, 3-cyano-phenyl, 4-cyano-3-alkyl-phenyl, 3-cyano-4-alkyl-phenyl, 3-acetonitrile-phenyl, 5-chloro-2-hydroxy-phenyl, 5-trifluoromethyl-2-chloro-phenyl, 3-carbamoyl-phenyl or 4,6-dimethoxy-3-chloro-phenyl; and Ar<sup>2</sup> represents acetamido, phenyl, 3-cyano-phenyl, 5-chloro-2-hydroxy-phenyl, 5-trifluoromethyl-2-chloro-phenyl, isoxazolyl, 5-methyl-isoxazol-3-yl or pyridinyl.

In a still more preferred embodiment Ar<sup>1</sup> represents phenyl, 3-nitro-phenyl, 3-cyano-phenyl, 4-cyano-3-alkyl-phenyl, 3-cyano-4-alkyl-phenyl, 3-acetonitrile-phenyl, 5-chloro-2-hydroxy-phenyl, 5-trifluoromethyl-2-chloro-phenyl, 3-carbamoyl-phenyl or 4,6-dimethoxy-3-chloro-phenyl; and Ar<sup>2</sup> represents phenyl, 3-cyano-phenyl, 5-chloro-2-hydroxy-phenyl, 5-trifluoromethyl-2-chloro-phenyl, isoxazolyl, 5-methyl-isoxazol-3-yl or pyridinyl.

In a sixth preferred embodiment the compound of the invention is represented by Formula I, wherein Ar<sup>1</sup> represents a pyridinyl group; and Ar<sup>2</sup> represents phenyl, furanyl, thienyl or pyridinyl, which phenyl, furanyl, thienyl and pyridinyl are optionally substituted once or twice with alkyl, nitro and/or cyano.

In a more preferred embodiment Ar<sup>1</sup> represents a pyridinyl group; and Ar<sup>2</sup> represents phenyl, 3-nitro-phenyl, 3-cyano-phenyl, 4-cyano-3-methyl-phenyl, 3-cyano-4-methyl-phenyl, 3-acetonitrile-phenyl, 3-carbamoyl-phenyl, furanyl, 5-nitro-furan-2-yl, thienyl, 5-cyano-thien-2-yl or pyridinyl.

In an even more preferred embodiment Ar<sup>1</sup> represents a pyridinyl group; and Ar<sup>2</sup> represents phenyl or thienyl, which phenyl and thienyl are optionally substituted with alkyl, nitro and/or cyano.

In a still more preferred embodiment Ar<sup>1</sup> represents a pyridin-3-yl group; and Ar<sup>2</sup> represents phenyl or thienyl, which phenyl or thienyl is substituted with cyano.

In a seventh preferred embodiment the compound of the invention is represented by Formula I, wherein Ar<sup>1</sup> represents a pyridazinyl group, optionally substituted with halo; and Ar<sup>2</sup> represents a furanyl group.

In a more preferred embodiment Ar<sup>1</sup> represents 6-chloro-pyridazin-3-yl group; and Ar<sup>2</sup> represents a furan-2-yl group.

In an eight preferred embodiment the compound of the invention is represented by Formula I, wherein Ar<sup>1</sup> represents a pyrazinyl group; and Ar<sup>2</sup> represents a furanyl group.

In a more preferred embodiment Ar<sup>1</sup> represents a pyrazin-2-yl group; and

Ar<sup>2</sup> represents a furan-2-yl group.

In a most preferred embodiment the compound of the invention is

2-(5-Furan-2-yl-[1,3,4]oxadiazol-2-ylsulfanyl)-pyrazine;

3-(5-Benzylsulfanyl-[1,3,4]oxadiazol-2-yl)-pyridine;

5 3-Chloro-6-(5-furan-2-yl-[1,3,4]oxadiazol-2-ylsulfanyl)-pyridazine;

N-(5-Phenylmethanesulfonyl-[1,3,4]thiadiazol-2-yl)-acetamide;

3-[5-(5-Nitro-furan-2-yl)-[1,3,4]oxadiazol-2-yl]-pyridine;

3-[5-(3-Nitro-phenyl)-[1,3,4]oxadiazol-2-yl]-pyridine;

3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile;

10 5-[5-(3-Cyano-phenyl)-[1,3,4]oxadiazol-2-yl]-benzonitrile;

5-[5-(3-Cyano-phenyl)-[1,3,4]thiadiazol-2-yl]-benzonitrile;

5-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-pyridine;

3-(5-Pyridin-3-yl-[1,3,4]thiadiazol-2-yl)-benzonitrile;

5-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-thiophene-2-carbonitrile;

15 2-Methyl-4-(5-pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile;

2-Methyl-5-(5-pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile;

[3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-phenyl]-acetonitrile;

5-(5-Pyridin-3-yl-[1,3,4]thiadiazol-2-yl)-thiophene-2-carbonitrile;

4-Chloro-2-[5-(2-chloro-5-trifluoromethyl-phenyl)-[1,3,4]oxadiazol-2-yl]-

20 phenol;

4-Chloro-2-[5-(2-chloro-5-trifluoromethyl-phenyl)-[1,3,4]thiadiazol-2-yl]-

phenol;

3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzamide;

2-(5-Chloro-2,4-dimethoxy-phenyl)-5-(5-methyl-isoxazol-3-yl)-

25 [1,3,4]oxadiazole;

3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile;

3-(5-{6-Chloro-pyridin-3-yl}-[1,3,4]oxadiazol-2-yl)-benzonitrile;

(3-[5-{6-Chloro-pyridin-3-yl}-[1,3,4]oxadiazol-2-yl]-phenyl)-acetonitrile;

3-(5-{6-Fluoro-pyridin-3-yl}-[1,3,4]oxadiazol-2-yl)-benzonitrile;

30 (3-[5-{6-Fluoro-pyridin-3-yl}-[1,3,4]oxadiazol-2-yl]-phenyl)-acetonitrile;

3-(5-Benzo[1,3]dioxol-5-yl-[1,3,4]oxadiazol-2-yl)-pyridine;

3-(5-[5-Nitro-thiophen-2-yl]-[1,3,4]oxadiazol-2-yl)-pyridine;

3-(5-{5-Nitro-thiophen-2-yl}-[1,3,4]oxadiazole-2-yl)-pyridine;

3-(5-{5-Bromo-furan-2-yl}-[1,3,4]-oxadiazol-2-yl)-pyridine;

35 3-(5-{Furan-2-yl}-[1,3,4]oxadiazole-2-yl)-pyridine;

3-(5-Isioxazol-5-yl-[1,3,4]oxadiazole-2-yl)-pyridine;

3-(5-{2-Bromo-thiazol-4-yl}-[1,3,4]oxadiazole-2-yl)-pyridine;

3-(5-Furan-3-yl-[1,3,4]oxadiazole-2-yl)-pyridine;

5-(5-{5-Bromo-thiophen-2-yl}-[1,3,4]oxadiazole-2-yl)-2-chloro-pyridine;

- 5- (5- {5-Bromo-thiophen-2-yl}-[1,3,4]oxadiazole-2-yl)-2-fluoro-pyridine;  
 4- (5- {2,6-Difluoro-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 4- (5- {2,5,6-Trifluoro-pyridin-2-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 3- (5- {2,6-Difluoro-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 5 3- (5- {1,5,6-Trifluoro-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 3- (5- {4-Chloro-phenyl}-[1,3,4]oxadiazole-2-yl)-2,6-difluoro-pyridine;  
 3- (5- {4-Chloro-phenyl}-[1,3,4]oxadiazole-2-yl)-2,5,6-trifluoro-pyridine;  
 3- (5- {5-Bromo-thiophen-2-yl}-[1,3,4]oxadiazole-2-yl)-2-fluoro-pyridine;  
 3- (5- {2-Fluoro-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 10 2,3,6-Trifluoro-5- (5- {3-fluoro-phenyl}-[1,3,4]oxadiazole-2-yl)-pyridine;  
 2,5-Difluoro-3- (5- {3-fluoro-phenyl}-[1,3,4]oxadiazole-2-yl)-pyridine;  
 3- (5- {4-Chlorophenyl}-[1,3,4]oxadiazole-2-yl)-2,5-difluoropyridine;  
 4- (5- {2,5-Difluoro-pyridine-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 2- (3-Bromo-4-methyl-phenyl)-5- (4-chloro-phenyl)-[1,3,4]oxadiazole;  
 15 4- (5- {3-Bromo-4-methyl-phenyl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 2- (3-Bromo-4-methyl-phenyl)-5- (3-fluoro-phenyl)-[1,3,4]oxadiazole;  
 3- (5- {3-Bromo-4-methyl-phenyl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 4- (5- {2-Fluoro-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 2-Fluoro-3- (5- {3-fluoro-phenyl}-[1,3,4]oxadiazole-2-yl)-pyridine;  
 20 3- (5- {4-Chloro-phenyl}-[1,3,4]oxadiazole-2-yl)-2-fluoro-pyridine;  
 4- (5- {6-Fluoro-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 5- (5- {4-Chloro-phenyl}-[1,3,4]oxadiazole-2-yl)-2-fluoro-pyridine;  
 2-Fluoro-5- (5- {3-fluoro-phenyl}-[1,3,4]oxadiazole-2-yl)-pyridine;  
 (3- {5- {2,5,6-Trifluoro-pyridine-3-yl}-[1,3,4]oxadiazole-2-yl}-phenyl)-  
 25 acetonitrile;  
 2- (2-Fluoro-phenyl)-5-isoxazol-5-yl-[1,3,4]oxadiazole;  
 3- (5- {6-Methyl-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 3- (5-Pyrimidin-5-yl)-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 5- (5- {3-Fluorophenyl}-[1,3,4]oxadiazole-2-yl)-pyrimidine;  
 30 3- (5- {2,3-Dihydrobenzo-[1,4]dioxin-6-yl}-[1,3,4]oxadiazole-2-yl)-pyridine;  
 3- (5-Isioxazol-5-yl)-[1,3,4]oxadiazole-2-yl)-benzonitrile; or  
 2-Fluoro-3- (5-furan-3-yl)-[1,3,4]oxadiazole-2-yl)-pyridine;  
 any of its isomers or any mixture of isomers, or a pharmaceutically-  
 acceptable addition salt thereof.
- 35 Any combination of two or more of the embodiments described herein is  
 considered within the scope of the present invention.

### Definition of substituents

In the context of this invention an alkyl group designates a univalent saturated, straight or branched hydrocarbon chain. The hydrocarbon chain preferably contain of from one to eighteen carbon atoms (C<sub>1-18</sub>-alkyl), more preferred of from one to six carbon atoms (C<sub>1-6</sub>-alkyl; lower alkyl), including pentyl, isopentyl, neopentyl, tertiary pentyl, hexyl and isohexyl. In a preferred embodiment alkyl represents a C<sub>1-4</sub>-alkyl group, including butyl, isobutyl, secondary butyl, and tertiary butyl. In another preferred embodiment of this invention alkyl represents a C<sub>1-3</sub>-alkyl group, which may in particular be methyl, ethyl, propyl or isopropyl.

In the context of this invention an alkoxy group designates an "alkyl-O-" group, wherein alkyl is as defined above. Examples of preferred alkoxy groups of the invention include methoxy and ethoxy.

In the context of this invention halo represents fluoro, chloro, bromo or iodo, and haloalkyl group designates an alkyl group as defined herein, which alkyl group is substituted one or more times with halo. Thus a trihalomethyl group represents e.g. a trifluoromethyl group, a trichloromethyl group, and similar trihalo-substituted methyl groups. Preferred haloalkyl groups of the invention include trihalogenmethyl, preferably -CF<sub>3</sub>.

In the context of this invention a haloalkoxy group designates an alkoxy group as defined herein, which alkoxy group is substituted one or more times with halo. Preferred haloalkoxy groups of the invention include trihalogenmethoxy, preferably -OCF<sub>3</sub>.

### Pharmaceutically acceptable salts

The oxadiazole derivative of the invention may be provided in any form suitable for the intended administration. Suitable forms include pharmaceutically (i.e. physiologically) acceptable salts, and pre- or prodrug forms of the compound of the invention.

Examples of pharmaceutically acceptable addition salts include, without limitation, the non-toxic inorganic and organic acid addition salts such as the hydrochloride, the hydrobromide, the nitrate, the perchlorate, the phosphate, the sulphate, the formate, the acetate, the aconate, the ascorbate, the benzenesulphonate, the benzoate, the cinnamate, the citrate, the embonate, the enantate, the fumarate, the glutamate, the glycolate, the lactate, the maleate, the malonate, the mandelate, the methanesulphonate, the naphthalene-2-sulphonate derived, the phthalate, the salicylate, the sorbate, the stearate, the succinate, the tartrate, the toluene-p-sulphonate, and the like. Such salts may be formed by procedures well known and described in the art.

Metal salts of a compound of the invention include alkali metal salts, such as the sodium salt of a compound of the invention containing a carboxy group.

In the context of this invention the “onium salts” of N-containing compounds may also be contemplated as pharmaceutically acceptable salts. Preferred “onium salts” include the alkyl-onium salts, the cycloalkyl-onium salts, and the cycloalkylalkyl-onium salts. Particularly preferred onium salts of the invention include those created at the N-position according to the following Formula I'

#### 10 Steric isomers

It will be appreciated by those skilled in the art that the compounds of the present invention may exist in different stereoisomeric forms, including enantiomers, diastereomers, as well as geometric isomers (cis-trans isomers). The invention includes all such stereoisomers and any mixtures thereof including racemic mixtures.

15 Racemic forms can be resolved into the optical antipodes by known methods and techniques. One way of separating the enantiomeric compounds (including enantiomeric intermediates) is by use of an optically active amine, and liberating the diastereomeric, resolved salt by treatment with an acid. Another method for resolving racemates into the optical antipodes is based upon chromatography on  
 20 an optical active matrix. Racemic compounds of the present invention can thus be resolved into their optical antipodes, e.g., by fractional crystallisation of D- or L- (tartrates, mandelates or camphorsulphonate) salts for example.

Additional methods for the resolving the optical isomers are known in the art. Such methods include those described by *Jaques J, Collet A, & Wilen S* in  
 25 “Enantiomers, Racemates, and Resolutions”, John Wiley and Sons, New York (1981).

Optical active compounds can also be prepared from optical active starting materials or intermediates.

#### **Methods of producing oxadiazole derivatives**

30 The oxadiazole derivative of the invention may be prepared by conventional methods for chemical synthesis, e.g. those described in the working examples. The starting materials for the processes described in the present application are known or may readily be prepared by conventional methods from commercially available chemicals.

35 Also one compound of the invention can be converted to another compound of the invention using conventional methods.

The end products of the reactions described herein may be isolated by conventional techniques, e.g. by extraction, crystallisation, distillation, chromatography, etc.

## 5 Biological activity

The present invention is devoted to the provision modulators of the nicotinic receptors, which modulators are useful for the treatment of diseases or disorders related to the nicotinic acetylcholine receptor (nAChR). Preferred compounds of the invention show a positive allosteric modulation of the nicotinic acetylcholine  $\alpha 4\beta 2$  receptor subtypes.

Due to their pharmacological profile the compounds of the invention may be useful for the treatment of diseases or disorders as diverse as those related to the cholinergic system of the central nervous system (CNS), the peripheral nervous system (PNS), diseases or disorders related to smooth muscle contraction, endocrine diseases or disorders, diseases or disorders related to neuro-degeneration, diseases or disorders related to inflammation, pain, and abuse liability and withdrawal symptoms caused by the termination of abuse of chemical substances, in particular nicotine.

In a preferred embodiment the disease, disorder or condition relates to the central nervous system.

The compounds of the invention may also be useful as diagnostic tools or monitoring agents in various diagnostic methods, and in particular for *in vivo* receptor imaging (neuroimaging), and they may be used in labelled or unlabelled form.

In another preferred embodiment the disease, disorder or condition is a cognitive disorder, learning deficit, memory deficits and dysfunction, Down's syndrome, Alzheimer's disease, attention deficit, attention deficit hyperactivity disorder (ADHD), Tourette's syndrome, psychosis, depression, bipolar disorder, mania, manic depression, schizophrenia, cognitive or attention deficits related to schizophrenia, obsessive compulsive disorders (OCD), panic disorders, eating disorders such as anorexia nervosa, bulimia and obesity, narcolepsy, nociception, AIDS-dementia, senile dementia, autism, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis (ALS), anxiety, non-OCD anxiety disorders, convulsive disorders, convulsions, epilepsy, neurodegenerative disorders, transient anoxia, induced neuro-degeneration, neuropathy, diabetic neuropathy, periferic dyslexia, tardive dyskinesia, hyperkinesia, pain, mild pain, moderate or severe pain, pain of acute, chronic or recurrent character, pain caused by migraine, postoperative pain, phantom limb pain, inflammatory pain, neuropathic pain, chronic headache, central pain, pain related to diabetic neuropathy, to post therapeutic neuralgia, or to peripheral nerve injury, bulimia, post-traumatic syndrome, social phobia, sleeping disorders, pseudodementia,

Ganser's syndrome, pre-menstrual syndrome, late luteal phase syndrome, chronic fatigue syndrome, mutism, trichotillomania, jet-lag, arrhythmias, smooth muscle contractions, angina pectoris, premature labour, diarrhoea, asthma, tardive dyskinesia, hyperkinesia, premature ejaculation, erectile difficulty, hypertension, inflammatory disorders, inflammatory skin disorders, acne, rosacea, Chron's disease, inflammatory bowel disease, ulcerative colitis, diarrhoea, or abuse liability and withdrawal symptoms caused by termination of use of addictive substances, including nicotine containing products such as tobacco, opioids such as heroin, cocaine and morphine, benzodiazepines and benzodiazepine-like drugs, and alcohol.

10 In a more preferred embodiment the compounds of the invention are used for the treatment, prevention or alleviation of pain, mild or moderate or severe pain, pain of acute, chronic or recurrent character, pain caused by migraine, postoperative pain, phantom limb pain, inflammatory pain, neuropathic pain, chronic headache, central pain, pain related to diabetic neuropathy, to post therapeutic neuralgia, or to  
15 peripheral nerve injury.

In another more preferred embodiment the compounds of the invention are used for the treatment, prevention or alleviation of smooth muscle contractions, convulsive disorders, angina pectoris, premature labour, convulsions, diarrhoea, asthma, epilepsy, tardive dyskinesia, hyperkinesia, premature ejaculation, or erectile  
20 difficulty.

In a third more preferred embodiment the compounds of the invention are used for the treatment, prevention or alleviation of a neurodegenerative disorder, transient anoxia, or induced neuro-degeneration.

In a fourth more preferred embodiment the compounds of the invention are  
25 used for the treatment, prevention or alleviation of an inflammatory disorder, inflammatory skin disorder, acne, rosacea, Chron's disease, inflammatory bowel disease, ulcerative colitis, or diarrhoea.

In a fifth more preferred embodiment the compounds of the invention are used for the treatment, prevention or alleviation of diabetic neuropathy, schizophrenia,  
30 cognitive or attentional deficits related to schizophrenia, or depression.

In a sixth more preferred embodiment the compounds of the invention are used for the treatment, prevention or alleviation of pain, in particular neuropathic pain, diabetic neuropathy, schizophrenia and cognitive or attentional deficits related to schizophrenia, depression, and for assisting in obtaining smoking cessation.

35 In a seventh more preferred embodiment the compounds of the invention are used the treatment of abuse liability and withdrawal symptoms caused by termination of use of addictive substances, in particular nicotine containing products such as tobacco, opioids such as heroin, cocaine and morphine, cannabis, benzodiazepines, benzodiazepine-like drugs, and alcohol.

In an eighth more preferred embodiment the compounds of the invention are used for the treatment of anxiety, cognitive disorders, learning deficit, memory deficits and dysfunction, Down's syndrome, Alzheimer's disease, attention deficit, attention deficit hyperactivity disorder (ADHD), Parkinson's disease, Huntington's disease, 5 Amyotrophic Lateral Sclerosis, Gilles de la Tourette's syndrome, psychosis, depression, mania, manic depression, schizophrenia, obsessive compulsive disorders (OCD), panic disorders, eating disorders such as anorexia nervosa, bulimia and obesity, narcolepsy, nociception, AIDS-dementia, senile dementia, periferic neuropathy, autism, dyslexia, tardive dyskinesia, hyperkinesia, epilepsy, bulimia, post- 10 traumatic syndrome, social phobia, sleeping disorders, pseudodementia, Ganser's syndrome, pre-menstrual syndrome, late luteal phase syndrome, chronic fatigue syndrome, mutism, trichotillomania, and jet-lag.

In a ninth more preferred embodiment the compounds of the invention are used for the treatment of cognitive disorders, psychosis, schizophrenia and/or 15 depression.

In a tenth more preferred embodiment the compounds of the invention are used for the treatment of diseases, disorders, or conditions associated with smooth muscle contractions, including convulsive disorders, angina pectoris, premature labour, convulsions, diarrhoea, asthma, epilepsy, tardive dyskinesia, hyperkinesia, 20 premature ejaculation, and erectile difficulty.

In an eleventh more preferred embodiment the compounds of the invention are used for the treatment of endocrine disorders, such as thyrotoxicosis, pheochromocytoma, hypertension and arrhythmias.

In a twelfth more preferred embodiment the compounds of the invention are 25 used for the treatment of neurodegenerative disorders, including transient anoxia and induced neuro-degeneration.

In a thirteenth more preferred embodiment the compounds of the invention are used for the treatment of inflammatory diseases, disorders, or conditions, including inflammatory skin disorders such as acne and rosacea, Chron's disease, 30 inflammatory bowel disease, ulcerative colitis, and diarrhoea.

In a fourteenth more preferred embodiment the compounds of the invention are used for the treatment of pain, mild, moderate or severe pain, or pain of acute, chronic or recurrent character, as well as pain caused by migraine, postoperative pain, and phantom limb pain. The pain may in particular be neuropathic pain, chronic 35 headache, central pain, pain related to diabetic neuropathy, to post therapeutic neuralgia, or to peripheral nerve injury.

Finally, in a most preferred embodiment, the compounds of the invention may be useful for the treatment of depression, cognition, dementia, obesity, or associated with abuse liability and withdrawal symptoms caused by nicotine addiction.

In this context "treatment" covers treatment, prevention, prophylactics and alleviation of abuse liability and withdrawal symptoms and abstinence as well as treatment resulting in a voluntary diminished intake of the addictive substance.

In another aspect, the compounds of the invention are used as diagnostic agents, e.g. for the identification and localisation of nicotinic receptors in various tissues.

### Pharmaceutical compositions

In another aspect the invention provides novel pharmaceutical compositions comprising a therapeutically effective amount of a oxadiazole or thiadiazole derivative of the invention.

In a preferred embodiment the pharmaceutical composition of the invention comprises a therapeutically effective amount of

*N*-(5-Benzylsulfanyl-[1,3,4]thiadiazol-2-yl)-acetamide;  
3-(5-(5-Nitro-furan-2-yl)-[1,2,4]oxadiazol-3-yl)-pyridine;  
3-(5-(3-Nitro-phenyl)-[1,2,4]oxadiazol-3-yl)-pyridine; or  
2-Acetamido-5-benzylthio-[1,3,4]thiadiazole;

any of its isomers or any mixture of isomers, or a pharmaceutically-acceptable addition salt thereof.

While a compound of the invention for use in therapy may be administered in the form of the raw compound, it is preferred to introduce the active ingredient, optionally in the form of a physiologically acceptable salt, in a pharmaceutical composition together with one or more adjuvants, excipients, carriers, buffers, diluents, and/or other customary pharmaceutical auxiliaries.

In a preferred embodiment, the invention provides pharmaceutical compositions comprising the oxadiazole derivative of the invention, or a pharmaceutically acceptable salt or derivative thereof, together with one or more pharmaceutically acceptable carriers therefore, and, optionally, other therapeutic and/or prophylactic ingredients, known and used in the art. The carrier(s) must be "acceptable" in the sense of being compatible with the other ingredients of the formulation and not harmful to the recipient thereof.

The pharmaceutical composition of the invention may be administered by any convenient route, which suits the desired therapy. Preferred routes of administration include oral administration, in particular in tablet, in capsule, in dragée, in powder, or in liquid form, and parenteral administration, in particular cutaneous, subcutaneous, intramuscular, or intravenous injection. The pharmaceutical composition of the invention can be manufactured by the skilled person by use of standard methods and conventional techniques appropriate to the desired formulation.

When desired, compositions adapted to give sustained release of the active ingredient may be employed.

In a preferred embodiment, when the pharmaceutical composition of the invention is intended for treating patients with abuse liability and withdrawal symptoms caused by nicotine addiction, formulations such as gums, patches, sprays, inhalers, aerosols, etc., are contemplated.

Further details on techniques for formulation and administration may be found in the latest edition of Remington's Pharmaceutical Sciences (Maack Publishing Co., Easton, PA).

The actual dosage depends on the nature and severity of the disease being treated, and is within the discretion of the physician, and may be varied by titration of the dosage to the particular circumstances of this invention to produce the desired therapeutic effect. However, it is presently contemplated that pharmaceutical compositions containing of from about 0.1 to about 500 mg of active ingredient per individual dose, preferably of from about 1 to about 100 mg, most preferred of from about 1 to about 10 mg, are suitable for therapeutic treatments.

The active ingredient may be administered in one or several doses per day. A satisfactory result can, in certain instances, be obtained at a dosage as low as 0.1 µg/kg i.v. and 1 µg/kg p.o. The upper limit of the dosage range is presently considered to be about 10 mg/kg i.v. and 100 mg/kg p.o. Preferred ranges are from about 0.1 µg/kg to about 10 mg/kg/day i.v., and from about 1 µg/kg to about 100 mg/kg/day p.o.

### Methods of therapy

The oxadiazole derivatives of the present invention are valuable nicotinic and monoamine receptor modulators, and therefore useful for the treatment of a range of ailments involving cholinergic dysfunction as well as a range of disorders responsive to the action of nAChR modulators.

In another aspect the invention provides a method for the treatment, prevention or alleviation of a disease or a disorder or a condition of a living animal body, including a human, which disease, disorder or condition is responsive to modulation of cholinergic receptors and/or monoamine receptors, and which method comprises administering to such a living animal body, including a human, in need thereof an effective amount of an oxadiazole derivative of the invention.

In the context of this invention the term "treatment" covers treatment, prevention, prophylaxis or alleviation, and the term "disease" covers illnesses, diseases, disorders and conditions related to the disease in question.

The preferred indications contemplated according to the invention are those stated above.

It is at present contemplated that suitable dosage ranges are 0.1 to 1000 milligrams daily, 10-500 milligrams daily, and especially 30-100 milligrams daily, dependent as usual upon the exact mode of administration, form in which administered, the indication toward which the administration is directed, the subject  
5 involved and the body weight of the subject involved, and further the preference and experience of the physician or veterinarian in charge.

A satisfactory result can, in certain instances, be obtained at a dosage as low as 0.005 mg/kg i.v. and 0.01 mg/kg p.o. The upper limit of the dosage range is about 10 mg/kg i.v. and 100 mg/kg p.o. Preferred ranges are from about 0.001 to  
10 about 1 mg/kg i.v. and from about 0.1 to about 10 mg/kg p.o.

## EXAMPLES

The invention is further illustrated with reference to the following examples,  
15 which are not intended to be in any way limiting to the scope of the invention as claimed.

### Preparatory examples

#### Example 1

20 5-Furan-2-yl-[1,3,4]oxadiazole-2-thiol (Intermediate compound)

Potassium hydroxide 6.7 g (0.12 mole) was dissolved in 125 ml of methanol, 13.7 g (0.11 mole) of 2-furanoic hydrazide was added keeping the temperature at 25°C for  
25 half an hour, then was 16.5 g (0.22 mole) of carbon disulfide added. The reaction mixture was heated to reflux and stirred for 8 hours, then evaporated to an oil. The residue was added water, concentrated hydrochloric acid was added until pH = 4. The precipitate was isolated by filtration and dried. Yield 12.9 g (77 mmol, 70%).

30 In analogy herewith the following intermediate compound was made:

5-Pyridine-3-yl-[1,3,4]oxadiazole-2-thiol.

**Example 2**2-(5-Furan-2-yl-[1,3,4]oxadiazol-2-ylsulfanyl)-pyrazine (Compound 2.1)

- 5 5-Furan-2-yl-[1,3,4]oxadiazole-2-thiol (1.8 g, 11 mmole) was dissolved in 50 ml of dry dioxane, to the solution was added 1.3 g (11 mmole) of chloropyrazine and 1.4 g (11 mmole) of ethyldiisopropyl amine. The reaction mixture was heated at reflux for 3 days and evaporated to an oil. The oil was added 1 N (aq.) sodium hydroxide, the product was isolated by filtration and purified by column chromatography. Yield 1.1 g (4.5  
10 mmole, 41%); Mp. 92-93°C.

In analogy herewith the following compounds were made:

3-(5-Benzylsufanyl-[1,3,4]oxadiazol-2-yl)-pyridine (Compound 2.2)

Mp. 209-210°C; and

- 15 3-Chloro-6-(5-furan-2-yl-[1,3,4]oxadiazol-2-ylsulfanyl)-pyridazine (Compound 2.3)

Mp. 132-133°C.

**Example 3**N-(5-Phenylmethanesulfonyl-[1,3,4]oxadiazol-2-yl)-acetamide (Compound 3.1)

20

- 2-Acetamido-5-benzylthio-[1,3,4]thiadiazole (3 g, 11 mmole) in dichloromethane was added 8.6 g (50 mmole) of 3-chloroperbenzoic acid. The reaction mixture was stirred at room temperature for 90 minutes and filtrated. The  
25 filtrate was evaporated to an oil. The oil was triturated with water and a white precipitate was formed, which was isolated by filtration, the precipitate was washed with water and dried. Yield 2.6 g (8.7 mmole, 79%); Mp. 245-248°C.

**Example 4**5-Chloro-2,4-dimethoxy-benzoic acid ethyl ester (Intermediate compound)

5 5-Chloro-2,4-dimethoxy-benzoic acid (1g, 4.6 mmole) in 50 ml of ethanol (99%) was added 1.7 g (14 mmole) of thionyl chloride. The reaction mixture was stirred at 90°C overnight and evaporated to an oil. The residue was added 100 ml of water and 300 ml of ethyl acetate. The organic phase was washed twice with 100 ml 10% sodium bicarbonate and twice with 100 ml of brine. The organic phase was dried  
10 and evaporated to dryness. Yield 1.1g (4.5 mmole, 98%).

**Example 5**2-Chloro-2,4-dimethoxy-benzoic acid hydrazide (Intermediate compound)

15 5-Chloro-2,4-dimethoxy-benzoic acid ethyl ester (1.1 g, 4.4 mmole) in 10 ml of ethanol (99%) was drop wise added to 3.2 ml (66 mmole) of hydrazine hydrate. The reaction mixture was stirred at room temperature for 15 minutes, then at 90°C overnight. The reaction mixture was cooled to room temperature, added 100 ml of  
20 water and 300 ml of ethyl acetate. The water phase was extracted three times with 200 ml of ethyl acetate. The combined organic phases was washed, twice with 200 ml of 10% sodium bicarbonate, three times with 200 ml of brine, dried with sodium sulfate and evaporated to an oil, that was triturated with diethyl ether, the product was isolated by filtration. 0.72 g (3.1 mmole, 70%).

25

In analogy herewith the following intermediate compounds were made:

Nicotinic acid hydrazide;

3-Cyanobenzoic acid hydrazide;

3-Chloro-2-hydroxy-benzoic acid hydrazide;

30

3-Cyanobenzoic acid hydrazide;

- 3-Cyanomethylbenzoic acid hydrazide;
- 4-Cyanobenzoic acid hydrazide;
- 4-Chlorobenzoic acid hydrazide;
- 3-Fluorobenzoic acid hydrazide;
- 5
- 6-Methylnicotinic acid hydrazide.

**Example 6**3-Cyano-benzoic acid-*N'*-(pyridine-3-carbonyl)-hydrazide (Intermediate compound)

10

3-Cyano-benzoic acid (3.8 g, 25.5 mmole) and 10.7 ml (76.7 mmole) of triethyl amine in dichloromethane. The solution was cooled to 0°C and 22.8 ml (76.7 mmole) of 1-propanephosphonic acid cyclic anhydride was added, stirring was continued for 20 minutes, nicotinic acid hydrazide was added, the reaction mixture  
 15 was stirred at room temperature overnight and added brine. The organic layer was washed with saturated sodium bicarbonate solution, dried with sodium sulfate and evaporated to an oil. The product was purified by column chromatography. The product was used as this in the next step. Yield 2.6 g (9.8 mmole, 38%).

20 In analogy herewith the following intermediate compounds were made:

- Nicotinic acid *N'*-(5-nitro-furan-2-carbonyl)-hydrazide;
- Nicotinic acid *N'*-(3-nitro-benzoyl)-hydrazide;
- Nicotinic acid *N'*-(3-cyano-benzoyl)-hydrazide;
- 3-Cyano-benzoic acid *N'*-(3-cyano-benzoyl)-hydrazide;
- 25 Nicotinic acid *N'*-(pyridine-3-carbonyl)-hydrazide;
- 5-Cyano-thiophene-2-carboxylic acid *N'*-(pyridine-3-carbonyl)-hydrazide;
- 4-Cyano-3-methyl-benzoic acid *N'*-(pyridine-3-carbonyl)-hydrazide;
- 3-Cyano-4-methyl-benzoic acid *N'*-(pyridine-3-carbonyl)-hydrazide;
- 3-Cyanomethyl-benzoic acid *N'*-(pyridine-3-carbonyl)-hydrazide;
- 30 3-[*N'*-(Pyridine-3-carbonyl)-hydrazinocarbonyl]-benzamide;
- 5-Methyl-isoxazole-3-carboxylic acid *N'*-(5-chloro-2,4-dimethoxy-benzoyl)-hydrazide;
- 4-Cyanobenzoic acid *N'*-(pyridine-3-carbonyl)-hydrazide;
- 3-Cyanobenzoic acid *N'*-(6-chloro-pyridine-3-carbonyl)-hydrazide;
- 35 4-Cyanomethylbenzoic acid *N'*-(6-chloropyridine-3-carbonyl)-hydrazide;
- 3-Cyanobenzoic acid *N'*-(6-fluoropyridine-3-carbonyl)-hydrazide;

- 3-Cyanomethylbenzoic acid N'-(6-fluoro-pyridine-3-carbonyl)-hydrazide;  
 Benzo[1,3]dioxole-5-carboxylic acid N'-(pyridine-3-carbonyl)-hydrazide;  
 5-Nitro-thiophene-2-carboxylic acid N'-(pyridine-3-carbonyl)-hydrazide;  
 5-Chlorofuran-2-carboxylic acid N'-(pyridine-3-carbonyl)-hydrazide;  
 5  
 5-Bromofuran-2-carboxylic acid N'-(pyridine-3-carbonyl)-hydrazide;  
 Furan-2-carboxylic acid N'-(pyridine-3-carbonyl)-hydrazide;  
 Isoxazole-5-carboxylic acid N'-(pyridine-3-carbonyl)-hydrazide;  
 2-Bromothiazole-4-carboxylic acid N'-(pyridine-3-carbonyl)-hydrazide;  
 Furan-3-carboxylic acid N'-(pyridine-3-carbonyl)-hydrazide;  
 10  
 5-Bromothiophene-2-carboxylic acid N'-(6-chloro-pyridine-3-carbonyl)-  
 hydrazide;  
 5-Bromothiophene-2-carboxylic acid N'-(6-fluoro-pyridine-3-carbonyl)-  
 hydrazide;  
 4-Cyanobenzoic acid N'-(2,6-difluoropyridine-3-carbonyl)-hydrazide;  
 15  
 4-Cyanobenzoic acid N'-(2,5,6-trifluoropyridine-3-carbonyl)-hydrazide;  
 3-Cyanobenzoic acid N'-(2,6-difluoropyridine-3-carbonyl)-hydrazide;  
 3-Cyanobenzoic acid N'-(2,5,6-trifluoropyridine-3-carbonyl)-hydrazide;  
 4-Chlorobenzoic acid N'-(2,6-difluoropyridine-3-carbonyl)-hydrazide;  
 4-Chlorobenzoic acid N'-(2,5,6-trifluoropyridine-3-carbonyl)-hydrazide;  
 20  
 5-Bromothiophene-carboxylic acid N'-(2-fluoropyridine-3-carbonyl)-  
 hydrazide;  
 3-Cyanobenzoic acid N'-(2-fluoropyridine-3-carbonyl)-hydrazide;  
 3-Bromo-4-methylbenzoic acid n'-(3-cyanobenzoyl)-hydrazide;  
 2-Fluoronicotinic acid N'-(4-cyanobenzoyl)-hydrazide;  
 25  
 2-Fluoromicotinic acid N'-(3-fluorobenzoyl)-hydrazide;  
 2-Fluoronicotinic acid N'-(4-chlorobenzoyl)-hydrazide;  
 6-Fluoronicotinic acid N'-(4-cyanobenzoyl)-hydrazide;  
 6-Fluoronicotinic acid N'-(4-chlorobenzoyl)-hydrazide;  
 6-Fluoronicotinic acid N'-(4-fluorobenzoyl)-hydrazide;  
 30  
 2,5,6-Trifluoronicotinic acid N'-(3-cyanobenzoyl)-hydrazide;  
 Isoxazole-5-carboxylic acid N'-(2-fluorobenzoyl)-hydrazide;  
 3-Cyanobenzoic acid N'-(6-methylpyridine-3-carbonyl)-hydrazide;  
 3-Cyanobenzoic acid N'-(pyrimidine-5-carbonyl)-hydrazide.

**Example 7**3-(5-Pyridine-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile (Compound 7.1)

5            3-Cyano-benzoic acid-*N'*-(pyridine-3-carbonyl)-hydrazide (1.2 g, 4.5 mmole) in 25 ml of dichloromethane and 0.8 ml (9.5 mmole) of pyridine under a nitrogen atmosphere was cooled to -10°C, 2.8 g (9.9 mmole) of trifluoromethanesulfonic anhydride was added drop wise. The reaction mixture was stirred at -10°C for one hour, then at 0°C of one hour and at room temperature  
 10 overnight. The reaction mixture was added 100 ml of 10% (aq.) sodium bicarbonate and 100 ml of dichloromethane. The organic phase was washed with 50 ml brine, dried with sodium sulfate and evaporated to an oil. The crude product was purified by column chromatography. Yield 0.6 g (2.4 mmole, 54%); Mp. 170-174°C.

15 In analogy herewith the following compounds were made:

3-(5-{5-Nitro-furan-2-yl}-[1,3,4]oxadiazol-2-yl)-pyridine (Compound 7.2)

Mp. 165-168°C;

3-(5-{3-Nitro-phenyl}-[1,3,4]oxadiazol-2-yl)-pyridine (Compound 7.3)

Mp. 178-180°C;

20 3-(5-{3-Cyano-phenyl}-[1,3,4]oxadiazol-2-yl)-benzonitrile (Compound 7.4)

Mp. 249-251°C;

3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-pyridine (Compound 7.5)

Mp. 181-186°C;

3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-thiophene-2-carbonitrile (Compound 7.6)

25 Mp. 218-234°C;

2-Methyl-4-(5-pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile (Compound 7.7)

Mp. 231-244°C;

2-Methyl-5-(5-pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile (Compound 7.8)

Mp. 152-167°C;

30 3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-phenyl)-acetonitrile (Compound 7.9)

Mp. 231-238°C;

3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-thiophene-2-carbonitrile (Compound 7.10)

Mp. 237-241°C;

4-Chloro-2-(5-{2-chloro-5-trifluoromethyl-phenyl}-[1,3,4]oxadiazol-2-yl)-phenol  
(Compound 7.11)

Mp. 113-119°C;

3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)benzamide (Compound 7.12)

5 Mp. 233-239°C;

2-(5-Chloro-2,4-dimethoxy-phenyl)-5-(5-methyl-isoxazol-3-yl)-[1,3,4]oxadiazole  
(Compound 7.13)

Mp. 201-205°C;

3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile (Compound 7.14)

10 Mp. 229-238°C;

3-(5-{6-Chloro-pyridin-3-yl}-[1,3,4]oxadiazol-2-yl)-benzonitrile (Compound 7.15)

Mp. 207-209°C;

(3-[5-{6-Chloro-pyridin-3-yl}-[1,3,4]oxadiazol-2-yl]-phenyl)-acetonitrile (Compound  
7.16)

15 Mp. 175-180°C;

3-(5-{6-Fluoro-pyridin-3-yl}-[1,3,4]oxadiazol-2-yl)-benzonitrile (Compound 7.17)

Mp. 198-207°C;

(3-[5-[6-Fluoro-pyridin-3-yl]-[1,3,4]oxadiazol-2-yl]-phenyl)-acetonitrile (Compound  
7.18)

25

**Example 8**

3-(5-Pyridin-3-yl-[1,3,4]thiadiazol-2-yl)-benzonitrile (Compound 8.1)

30 3-Cyano-benzoic acid-*N'*-(pyridine-3-carbonyl)-hydrazide (1.3g, 4.7 mmole) in 40 ml of toluene was added 2.3g (5.6 mmole), in a sealed container was the reaction mixture stirred at 100°C overnight. The reaction mixture was evaporated, the residue was dissolved in 120 ml of ethyl acetate, this was washed with 50 ml of water, 30 ml of saturated brine, the organic phase was dried with sodium sulfate and  
 35 evaporated to dryness. The residue was purified by column chromatography. Yield 1.1 g (4.2 mmole, 89%); Mp. 258-261°C.

In analogy herewith the following compounds were made:

3-(5-{3-Cyano-phenyl}-[1,3,4]thiadiazol-2-yl)-benzonitrile (Compound 8.2)

Mp. 217-223°C; and

5 4-Chloro-2-(5-{2-chloro-5-trifluoromethyl-phenyl}-[1,3,4]thiadiazol-2-yl)-phenol (Compound 8.3);

Mp. 216-220°C.

## Example 9

### 10 Biological activity

#### Characterization of $\alpha 4\beta 2$ positive allosteric modulators using FLIPR

This experiment shows the modulating activity of compounds representative of the invention (i.e. 3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile, Compound 7.1; and 5-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-thiophene-2-carbonitrile, Compound 15 7.6) to positively modulate the response induced by a sub-maximal concentration of nicotine ( $EC_{20-30}$ ) in human HEK-293 cells stably expressing the human nicotinic acetylcholine receptor subtype  $\alpha 4\beta 2$ . The ability is determined relative to a maximal nicotine response (100  $\mu M$ ). The activity is determined as a fluorescence-based assay using a Fluorometric Imaging Plate Reader (FLIPR) as described below in more detail.

20 Full concentration/response curves are generated and  $EC_{50}$  values are calculated based on peak values.  $EC_{50}$  values (Effective Concentration) represent the concentration of the test substance, at which the nicotine-induced  $EC_{20-30}$  response is positively modulated such that the size of the response equals 50% of the maximal response. The maximal positively modulated response (efficacy) is determined relative 25 to the reference (nicotine) response.

Preferred compounds of the invention show an activity determined as  $EC_{50}$  values in the low micro-molar range, preferably below 10  $\mu M$ , more preferred in the sub-micromolar range, i.e. below 1  $\mu M$ , and demonstrating a significant efficacy.

The results of this experiment are presented in Table 1 below.

30

Table 1

FLIPR nAChR  $\alpha 4\beta 2$  positive allosteric modulator activity

Compound	$EC_{50}$ ( $\mu M$ )	Efficacy Response relative to Nicotine (%)
Compound 7.1	0.52	133
Compound 7.6	0.98	153

## CLAIMS

1. A compound represented by Formula I

a stereoisomer or a mixture of its stereoisomers, an N-oxide, a prodrug, or a pharmaceutically-acceptable addition salt thereof, wherein

10  $Ar^1$  represents a phenyl, pyridinyl, pyridazinyl, pyrimidinyl or pyrazinyl group, which phenyl, pyridinyl, pyridazinyl, pyrimidinyl and pyrazinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, hydroxy, alkoxy, halo, haloalkyl, haloalkoxy, nitro, cyano, acetonitrile, amino-carbonyl (carbamoyl) and methylenedioxy;

15  $Ar^2$  represents alkyl-carbonyl-amino (acetamido), or a phenyl, furanyl, thienyl, isoxazolyl, thiazolyl or pyridinyl group, which phenyl, furanyl, thienyl, isoxazolyl, thiazolyl and pyridinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, halo, haloalkyl, 20 haloalkoxy, nitro and cyano;

L may be absent (i.e. represents a single covalent bond) or present, and if present represents a linking group selected from  $CH_2$ ,  $CH_2CH_2$ , S, S- $CH_2$ , O, O- $CH_2$ ,  $SO_2$  and  $SO_2CH_2$ ; and

25

X represents O or S.

2. The compound of claim 1, a stereoisomer or a mixture of its stereoisomers, or a pharmaceutically-acceptable addition salt thereof, wherein  $Ar^1$  30 represents a phenyl, pyridinyl, pyridazinyl, pyrimidinyl or pyrazinyl group, which phenyl, pyridinyl, pyridazinyl, pyrimidinyl and pyrazinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, hydroxy, alkoxy, halo, haloalkyl, haloalkoxy, nitro, cyano, acetonitrile, amino-carbonyl (carbamoyl) and methylenedioxy.

35

3. The compound of claim 1, a stereoisomer or a mixture of its stereoisomers, or a pharmaceutically-acceptable addition salt thereof, wherein  $Ar^2$  represents alkyl-carbonyl-amino (acetamido), or a phenyl, furanyl, thienyl, isoxazolyl,

thiazolyl or pyridinyl group, which phenyl, furanyl, thienyl, isoxazolyl, thiazolyl and pyridinyl groups may optionally be substituted one or more times with substituents selected from the group consisting of alkyl, halo, haloalkyl, haloalkoxy, nitro and cyano.

5

4. The compound of claim 1, a stereoisomer or a mixture of its stereoisomers, or a pharmaceutically-acceptable addition salt thereof, wherein  $L_1$  and may be absent (i.e. represents a single covalent bond) or present, and if present represents a linking group selected from  $CH_2$ ,  $CH_2CH_2$ , S, S- $CH_2$ , O, O- $CH_2$ ,  $SO_2$  and  
10  $SO_2CH_2$ .

15

5. The compound of claim 1, a stereoisomer or a mixture of its stereoisomers, or a pharmaceutically-acceptable addition salt thereof, wherein X represents O or S.

15

6. The compound of claim 1, a stereoisomer or a mixture of its stereoisomers, or a pharmaceutically-acceptable addition salt thereof, wherein

$Ar^1$  represents phenyl, optionally substituted one or more times with substituents selected from the group consisting of alkyl, hydroxy, alkoxy, halo, nitro,  
20 cyano, acetonitrile and amino-carbonyl (carbamoyl); and

$Ar^2$  represents acetamido, phenyl, isoxazolyl or pyridinyl, substituted once or twice with alkyl, halo, trifluoromethyl and/or cyano.

7. The compound of claim 1, a stereoisomer or a mixture of its  
25 stereoisomers, or a pharmaceutically-acceptable addition salt thereof, wherein

$Ar^1$  represents a pyridinyl group; and

$Ar^2$  represents phenyl, furanyl, thienyl or pyridinyl, which phenyl, furanyl, thienyl and pyridinyl groups are optionally substituted once or twice with alkyl, nitro and/or cyano.

30

8. The compound of claim 1, a stereoisomer or a mixture of its stereoisomers, or a pharmaceutically-acceptable addition salt thereof, wherein

$Ar^1$  represents a pyridazinyl group, optionally substituted with halo; and

$Ar^2$  represents a furanyl group.

35

9. The compound of claim 1, a stereoisomer or a mixture of its stereoisomers, or a pharmaceutically-acceptable addition salt thereof, wherein

$Ar^1$  represents a pyrazinyl group; and

$Ar^2$  represents a furanyl group.

10. The compound of claim 1, which is
- 2-(5-Furan-2-yl-[1,3,4]oxadiazol-2-ylsulfanyl)-pyrazine;
- 3-(5-Benzylsulfanyl-[1,3,4]oxadiazol-2-yl)-pyridine;
- 5 3-Chloro-6-(5-furan-2-yl-[1,3,4]oxadiazol-2-ylsulfanyl)-pyridazine;
- N*-(5-Phenylmethanesulfonyl-[1,3,4]thiadiazol-2-yl)-acetamide;
- 3-[5-(5-Nitro-furan-2-yl)-[1,3,4]oxadiazol-2-yl]-pyridine;
- 3-[5-(3-Nitro-phenyl)-[1,3,4]oxadiazol-2-yl]-pyridine;
- 3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile;
- 10 5-[5-(3-Cyano-phenyl)-[1,3,4]oxadiazol-2-yl]-benzonitrile;
- 5-[5-(3-Cyano-phenyl)-[1,3,4]thiadiazol-2-yl]-benzonitrile;
- 5-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-pyridine;
- 3-(5-Pyridin-3-yl-[1,3,4]thiadiazol-2-yl)-benzonitrile;
- 5-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-thiophene-2-carbonitrile;
- 15 2-Methyl-4-(5-pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile;
- 2-Methyl-5-(5-pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile;
- [3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-phenyl]-acetonitrile;
- 5-(5-Pyridin-3-yl-[1,3,4]thiadiazol-2-yl)-thiophene-2-carbonitrile;
- 4-Chloro-2-[5-(2-chloro-5-trifluoromethyl-phenyl)-[1,3,4]oxadiazol-2-yl]-
- 20 phenol;
- 4-Chloro-2-[5-(2-chloro-5-trifluoromethyl-phenyl)-[1,3,4]thiadiazol-2-yl]-
- phenol;
- 3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzamide;
- 2-(5-Chloro-2,4-dimethoxy-phenyl)-5-(5-methyl-isoxazol-3-yl)-
- 25 [1,3,4]oxadiazole;
- 3-(5-Pyridin-3-yl-[1,3,4]oxadiazol-2-yl)-benzonitrile;
- 3-(5-{6-Chloro-pyridin-3-yl}-[1,3,4]oxadiazol-2-yl)-benzonitrile;
- (3-[5-{6-Chloro-pyridin-3-yl}-[1,3,4]oxadiazol-2-yl]-phenyl)-acetonitrile;
- 3-(5-{6-Fluoro-pyridin-3-yl}-[1,3,4]oxadiazol-2-yl)-benzonitrile;
- 30 (3-[5-{6-Fluoro-pyridin-3-yl}-[1,3,4]oxadiazol-2-yl]-phenyl)-acetonitrile;
- 3-(5-Benzo[1,3]dioxol-5-yl-[1,3,4]oxadiazol-2-yl)-pyridine;
- 3-(5-[5-Nitro-thiophen-2-yl]-[1,3,4]oxadiazol-2-yl)-pyridine;
- 3-(5-[5-Nitro-thiophen-2-yl]-[1,3,4]oxadiazole-2-yl)-pyridine;
- 3-(5-[5-Bromo-furan-2-yl]-[1,3,4]-oxadiazol-2-yl)-pyridine;
- 35 3-(5-{Furan-2-yl}-[1,3,4]oxadiazole-2-yl)-pyridine;
- 3-(5-Isloxazol-5-yl-[1,3,4]oxadiazole-2-yl)-pyridine;
- 3-(5-{2-Bromo-thiazol-4-yl}-[1,3,4]oxadiazole-2-yl)-pyridine;
- 3-(5-Furan-3-yl-[1,3,4]oxadiazole-2-yl)-pyridine;
- 5-(5-[5-Bromo-thiophen-2-yl]-[1,3,4]oxadiazole-2-yl)-2-chloro-pyridine;

- 5-(5-{5-Bromo-thiophen-2-yl}-[1,3,4]oxadiazole-2-yl)-2-fluoro-pyridine;  
 4-(5-{2,6-Difluoro-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 4-(5-{2,5,6-Trifluoro-pyridin-2-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 3-(5-{2,6-Difluoro-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 5 3-(5-{1,5,6-Trifluoro-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 3-(5-{4-Chloro-phenyl}-[1,3,4]oxadiazole-2-yl)-2,6-difluoro-pyridine;  
 3-(5-{4-Chloro-phenyl}-[1,3,4]oxadiazole-2-yl)-2,5,6-trifluoro-pyridine;  
 3-(5-{5-Bromo-thiophen-2-yl}-[1,3,4]oxadiazole-2-yl)-2-fluoro-pyridine;  
 3-(5-{2-Fluoro-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 10 2,3,6-Trifluoro-5-(5-{3-fluoro-phenyl}-[1,3,4]oxadiazole-2-yl)-pyridine;  
 2,5-Difluoro-3-(5-{3-fluoro-phenyl}-[1,3,4]oxadiazole-2-yl)-pyridine;  
 3-(5-{4-Chlorophenyl}-[1,3,4]oxadiazole-2-yl)-2,5-difluoropyridine;  
 4-(5-{2,5-Difluoro-pyridine-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 2-(3-Bromo-4-methyl-phenyl)-5-(4-chloro-phenyl)-[1,3,4]oxadiazole;  
 15 4-(5-{3-Bromo-4-methyl-phenyl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 2-(3-Bromo-4-methyl-phenyl)-5-(3-fluoro-phenyl)-[1,3,4]oxadiazole;  
 3-(5-{3-Bromo-4-methyl-phenyl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 4-(5-{2-Fluoro-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 2-Fluoro-3-(5-{3-fluoro-phenyl}-[1,3,4]oxadiazole-2-yl)-pyridine;  
 20 3-(5-{4-Chloro-phenyl}-[1,3,4]oxadiazole-2-yl)-2-fluoro-pyridine;  
 4-(5-{6-Fluoro-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 5-(5-{4-Chloro-phenyl}-[1,3,4]oxadiazole-2-yl)-2-fluoro-pyridine;  
 2-Fluoro-5-(5-{3-fluoro-phenyl}-[1,3,4]oxadiazole-2-yl)-pyridine;  
 (3-{5-[2,5,6-Trifluoro-pyridine-3-yl]-[1,3,4]oxadiazole-2-yl}-phenyl)-  
 25 acetonitrile;  
 2-(2-Fluoro-phenyl)-5-isoxazol-5-yl-[1,3,4]oxadiazole;  
 3-(5-{6-Methyl-pyridin-3-yl}-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 3-(5-Pyrimidin-5-yl-[1,3,4]oxadiazole-2-yl)-benzonitrile;  
 5-(5-{3-Fluorophenyl}-[1,3,4]oxadiazole-2-yl)-pyrimidine;  
 30 3-(5-{2,3-Dihydrobenzo-[1,4]dioxin-6-yl-[1,3,4]oxadiazole-2-yl)-pyridine;  
 3-(5-Isioxazol-5-yl-[1,3,4]oxadiazole-2-yl)-benzonitrile; or  
 2-Fluoro-3-(5-furan-3-yl-[1,3,4]oxadiazole-2-yl)-pyridine;  
 a stereoisomer or a mixture of its stereoisomers, or a pharmaceutically-  
 acceptable addition salt thereof.

35

11. A pharmaceutical composition comprising a therapeutically effective amount of a compound of any one of claims 1-10, or a pharmaceutically-acceptable addition salt thereof, together with at least one pharmaceutically-acceptable carrier or diluent.

12. The compound of any one of claims 1-10, or a pharmaceutically acceptable salt thereof, or a prodrug thereof, for use as a medicament.

5 13. Use of a compound of any one of claims 1-10, or a pharmaceutically-acceptable addition salt thereof, for the manufacture of a pharmaceutical composition/medicament for the treatment, prevention or alleviation of a disease or a disorder or a condition of a mammal, including a human, which disease, disorder or condition is responsive to modulation of cholinergic receptors.

10

14. The use according to claim 13, wherein the disease, disorder or condition is a cognitive disorder, learning deficit, memory deficits and dysfunction, Down's syndrome, Alzheimer's disease, attention deficit, attention deficit hyperactivity disorder (ADHD), Tourette's syndrome, psychosis, depression, bipolar disorder, 15 mania, manic depression, schizophrenia, cognitive or attention deficits related to schizophrenia, obsessive compulsive disorders (OCD), panic disorders, eating disorders such as anorexia nervosa, bulimia and obesity, narcolepsy, nociception, AIDS-dementia, senile dementia, autism, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis (ALS), anxiety, non-OCD anxiety disorders, convulsive 20 disorders, convulsions, epilepsy, neurodegenerative disorders, transient anoxia, induced neuro-degeneration, neuropathy, diabetic neuropathy, periferic dyslexia, tardive dyskinesia, hyperkinesia, pain, mild pain, moderate or severe pain, pain of acute, chronic or recurrent character, pain caused by migraine, postoperative pain, phantom limb pain, inflammatory pain, neuropathic pain, chronic headache, central 25 pain, pain related to diabetic neuropathy, to post therapeutic neuralgia, or to peripheral nerve injury, bulimia, post-traumatic syndrome, social phobia, sleeping disorders, pseudodementia, Ganser's syndrome, pre-menstrual syndrome, late luteal phase syndrome, chronic fatigue syndrome, mutism, trichotillomania, jet-lag, arrhythmias, smooth muscle contractions, angina pectoris, premature labour, 30 diarrhoea, asthma, tardive dyskinesia, hyperkinesia, premature ejaculation, erectile difficulty, hypertension, inflammatory disorders, inflammatory skin disorders, acne, rosacea, Chron's disease, inflammatory bowel disease, ulcerative colitis, diarrhoea, or abuse liability and withdrawal symptoms caused by termination of use of addictive substances, including nicotine containing products such as tobacco, opioids such as 35 heroin, cocaine and morphine, cannabis, benzodiazepines and benzodiazepine-like drugs, and alcohol.

15. A method of treatment, prevention or alleviation of a disease or a disorder or a condition of a living animal body, including a human, which disorder,

disease or condition is responsive to modulation of cholinergic receptors, which method comprises the step of administering to such a living animal body in need thereof a therapeutically effective amount of a compound of any one of claims 1-10.

# INTERNATIONAL SEARCH REPORT

International application No  
PCT/EP2007/061433

## A. CLASSIFICATION OF SUBJECT MATTER

INV. C07D413/04 C07D413/14 C07D417/14 C07D285/135 A61K31/4245  
A61K31/433 A61P25/00

According to International Patent Classification (IPC) or to both national classification and IPC

## B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

C07D A61K A61P

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

EPO-Internal, WPI Data, BEILSTEIN Data, CHEM ABS Data

## C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
E	WO 2007/149395 A (AMPHORA DISCOVERY CORP [US]; MENDOZA JOSE S [US]; DICKSON JR JOHN K [U] 27 December 2007 (2007-12-27) examples -----	1-15
X	WO 02/064135 A (TELIK INC [US]) 22 August 2002 (2002-08-22) page 15 - page 23; examples -----	1-15

### \* Special categories of cited documents :

- \*A\* document defining the general state of the art which is not considered to be of particular relevance
- \*E\* earlier document but published on or after the international filing date
- \*L\* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- \*O\* document referring to an oral disclosure, use, exhibition or other means
- \*P\* document published prior to the international filing date but later than the priority date claimed

- \*T\* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- \*X\* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- \*Y\* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- \*G\* document member of the same patent family

## INTERNATIONAL SEARCH REPORT

International application No.  
PCT/EP2007/061433

### Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.:  
because they relate to subject matter not required to be searched by this Authority, namely:  
  
Although claim 15 is directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.
2. ☐ Claims Nos.:  
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3. ☐ Claims Nos.:  
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

### Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers allsearchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fees, this Authority did not invite payment of additional fees.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search reportcovers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

#### Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest and, where applicable, the payment of a protest fee.
- ☐ The additional search fees were accompanied by the applicant's protest but the applicable protest fee was not paid within the time limit specified in the invitation.
- ☐ No protest accompanied the payment of additional search fees.
