UNITED STATES PATENT OFFICE

RUDOLPH BUSCH, SR., OF SHELLTOWN, MARYLAND

CLEANING PAD

Application filed March 6, 1929. Serial No. 344,840.

The object of my invention is to provide a novel cleaning pad for use in the cleaning of silver and other metal objects, and for like purposes.

I attain the objects of my invention by the device shown in the accompanying drawings, in which:—

Figure 1 is a perspective view of my cleaning pad; and

Fig. 2 is a section on line 2—2 of Fig. 1.

Like characters of reference are used on both views.

Referring to the accompanying drawings, I provide a fabric container 1 made of a single strip of fabric, bent at 3 into U-shape and with its edged portions 4 on two sides turned in and sewed together with a line of stitching at 5 while the bag is turned inside out; the bag is then reversed. The bag is filled with my cleaning compound "G" and the line of stitching 5 is then sewed, closing the bag.

My cleaning compound "G" comprises the following ingredients: 90% calcium carbonate, 8% sodium carbonate, 2% sodium chlorid.

What I claim is:

In a cleaning pad, a fabric container stitched together on all sides and containing a powdered cleaning compound comprising approximately 90% calcium carbonate, approximately 8% sodium carbonate and approximately 2% sodium chlorid.

RUDOLPH BUSCH, SR.
