Novel Cysteine Protease Inhibitors

Abstract: Substituted heteroaryl nitrile derivatives of Formula (I), processes for their preparation, pharmaceutical compositions comprising such compounds and use of the compounds as cysteine protease inhibitors are provided.
NOVEL CYSTEINE PROTEASE INHIBITORS

FIELD OF THE INVENTION

The invention is directed to certain substituted heteroaryl nitrile derivatives, which are protease inhibitors. More specifically, the compounds are inhibitors of cysteine proteases. In particular, the compounds inhibit cysteine proteases of the papain superfamily, more specifically those of the falcipain family, which are cysteine proteases found in the malaria parasite *Plasmodium falciparum*, and also cysteine proteases of the cathepsin family such as cathepsins K, L, S and B.

BACKGROUND OF THE INVENTION

Malaria is one of the major disease problems of the developing world. The most virulent malaria-causing parasite in humans is *Plasmodium falciparum*, which is the cause of hundreds of millions of cases of malaria per annum, and is thought to cause over 1 million deaths each year, Breman, J. G., et al., (2001) Am. Trop. Med. Hyg. 64, 1-11. One problem encountered in the treatment of malaria is the build-up of resistance by the parasite to available drugs. Thus there is a need to develop new antimalarial drugs.

Importantly, cysteine protease inhibitors that inhibit falcipain-2 consistently block haemoglobin hydrolysis and parasite development. These data suggest that falcipain-2 is a key target enzyme, but it is likely that the other two falcipains are also appropriate targets and that, in many cases, they are inhibited by the same compounds that are active against falcipain-2. Like falcipain-2, falcipain-3 readily hydrolyzes native haemoglobin under mildly reducing conditions that are similar to those found in physiological systems, Shenai B.R. et al., (2000) J. Biol. Chem. 275, 29000-10. Importantly, cysteine protease inhibitors that inhibit falcipain-2 consistently block haemoglobin hydrolysis and parasite development. These data suggest that falcipain-2 is a key target enzyme, but it is likely that the other two falcipains are also appropriate targets and that, in many cases, they are inhibited by the same compounds that are active against falcipain-2. Like falcipain-2, falcipain-3 readily hydrolyzes native haemoglobin under mildly reducing conditions that are similar to those found in physiological systems, Shenai B.R. et al., (2000) J. Biol. Chem. 275, 29000-10; Sijwali P.S. et al., (2001) Biochem. J. 360, 481-9; Shenai B.R. and Rosenthal P.J., (2002) Mol. Biochem. Parasitol. 122, 99-104. Falcipain-2 and falcipain-3 are similar in structure but falcipain-1 is a more distant relative; it is thought that this enzyme plays a key role in the invasion of erythrocytes by *Plasmodium falciparum* merozoites but that it is not essential for normal development during the erythrocytic stage, Sijwali, P. S., et al., Proceedings of the National Academy of Sciences of the United States of America 101, 8721-8726. Whether falcipain-1 also plays a role in haemoglobin processing is unknown. Very recently, a fourth papain-family cysteine protease has been found, now known as falcipain-2'. Falcipain-2'1 is nearly identical in sequence to falcipain-2, differing by only 3 amino acids, none of which are located at the active site. The structure of falcipain-2'1 is not known, but is likely to be very similar to that of falcipain-2. The biological role of falcipain-2'1 is also expected to be very similar, although probably not identical, to that of falcipain-2. In any event, cysteine protease inhibition, in particular the inhibition of falcipain-2, blocks parasite development. Falcipain-2 and related plasmodial cysteine proteases are thus logical targets for antimalarial chemotherapy and therefore there is a need for compounds which are inhibitors of these targets.

*P. vivax* is the second most important human malaria parasite, after *P. falciparum*. Although less virulent than *P. falciparum, P. vivax* is the most widely distributed human malaria parasite, and it causes extensive morbidity (Mendis, K., Sina, B. J., Marchesini, P. and Carter, R. (2001) "The neglected burden of *Plasmodium vivax* malaria" Am. J. Trop. Med. Hyg. 64, 97-106). These two parasites are responsible for more than 90% of episodes of human malaria, totalling several hundred million cases annually. However, comprehensive studies of *P. vivax* have been limited due to technical shortcomings. Notably, unlike the case with *P. falciparum*, routine *in vitro* culture of *P. vivax* is not available, and animal models are limited to primates. Very recently (Na, B.K., Shenai, B. R., Sijwali, P. S., Choe, Y., Pandey, K. C., Singh, A., Craik, C. S., Rosenthal, P. J. (2004) identification and biochemical characterization of vivapains, cysteine proteases of the malaria parasite *Plasmodium vivax*. Biochem. J. 378, 529-538), two cysteine protease genes (vivapain-2 and vivapain-3) from *P. vivax* have been identified and cloned and the heterologously expressed gene products have been characterized biochemically. It was found that these cysteine proteases are apparent orthologues of falcipain-2 and falcipain-3, but key differences in the biochemical properties of the plasmodial proteases warrant
attention to the inhibition of each enzyme in the evaluation of antimalarial protease inhibitors.

Cathepsins are a family of enzymes which are part of the papain superfamily of cysteine proteases. Certain cathepsins, for example cathepsins K, B, L, and S have been described in the literature. Cathepsin K polypeptide and the cDNA encoding such polypeptide were disclosed in U.S. Patent No. 5,501,969. Cathepsin K has also been variously denoted as cathepsin O or cathepsin 0.2 in the literature. The designation cathepsin K is considered to be the most appropriate and is used herein. Cathepsin K has been expressed, purified, and characterised, Bossard, M. J., et al., (1996) J. Biol. Chem. 271, 12517-12524; Drake, F.H., et al., (1996) J. Biol. Chem. 271, 12511-12516; Bromme, D., et al., (1996) J. Biol. Chem. 271, 2126-2132.

Cathepsins function in the normal physiological process of protein degradation in animals, including humans, e.g. in the degradation of connective tissue. However, elevated levels of these enzymes in the body can result in pathological conditions leading to disease. Thus, cathepsins have been implicated as causative agents in various disease states, including but not limited to, infections by Pneumocystis Carinii, Trypanosoma cruzi, Trypsanoma brucei, and Crithidia fusciculata; as well as in schistosomiasis, malaria, cancer, for example pancreatic cancer (see Joyce J. A. et al., Cancer Cell (2004) 5, 443-453 and Gocheva V., Genes & Development (2006) 20, 543-556), tumour invasion and tumour metastasis, metachromatic leukodystrophy, muscular dystrophy, amyotrophy, inflammation, rheumatoid arthritis, osteoarthritis, osteoporosis, coronary disease, atherosclerosis, autoimmune diseases, respiratory diseases such as obstructive pulmonary disorder (COPD), immunologically mediated diseases (for example, transplant rejection), and other related diseases, see: International Publication Number WO 94/04172, published on March 3, 1994, and references cited therein; see also: European Patent Application EP 0 603 873 A1, and references cited therein. Two bacterial cysteine proteases from P. gingivalis, called gingipains, have been implicated in the pathogenesis of gingivitis, Potempa, J., et al., (1994) Perspectives in Drug Discovery and Design 2, 445-458.

Cathepsin K is believed to play a causative role in diseases of excessive bone or cartilage loss. Bone is composed of a protein matrix in which spindle- or plate-shaped crystals of hydroxyapatite are incorporated. Type I collagen represents the major structural protein of bone comprising approximately 90% of the protein matrix. The remaining 10% of matrix is composed of a number of non-collagenous proteins, including osteocalcin, proteoglycans, osteopontin, osteonectin, thrombospondin, fibronectin, and bone sialoprotein. Skeletal bone undergoes remodeling at discrete foci throughout life. These foci, or remodeling units, undergo a cycle consisting of a bone resorption phase followed by a phase of bone replacement.
Bone resorption is carried out by osteoclasts, which are multinuclear cells of haematopoietic lineage. In several disease states, such as osteoporosis and Paget's disease, the normal balance between bone resorption and formation is disrupted, and there is a net loss of bone at each cycle of resorption and formation. Ultimately, this leads to weakening of the bone and may result in increased fracture risk with minimal trauma. Several published studies have demonstrated that inhibitors of cysteine proteases are effective at inhibiting osteoclast-mediated bone resorption, thus indicating an essential role for cysteine proteases in bone resorption. For example, Delaisse, et al., (1980) Biochem. J., 192, 365, suggests that inhibitors of cysteine proteases (e.g., leupeptin, Z-Phle-Ala-CHN₂) prevent bone resorption, while serine protease inhibitors were ineffective. Delaisse et. al., (1984) Biochem. Biophys. Res. Commun. 125, 441, discloses that E-64 (L-trans-epoxysuccinyl-leucinamido-(4-guanidino)butane) and leupeptin are also effective at preventing bone resorption in vivo in rats. Lerner, et al., (1992) J. Bone Min. Res. 7, 433, discloses that cystatin, an endogenous cysteine protease inhibitor, inhibits PTH stimulated bone resorption in mouse calvariae. Other studies report a correlation between inhibition of cysteine protease activity and bone resorption. Tezuka, et al., (1994) J. Biol. Chem. 269, 1106; Inaoka, et al., (1995) Biochem. Biophys. Res. Commun., 206, 89 and Shi, et al., (1995) FEBS Lett. 357, 129 disclose that under normal conditions cathepsin K is abundantly expressed in osteoclasts and may be the major cysteine protease present in these cells.

The abundant selective expression of cathepsin K in osteoclasts strongly suggests that this enzyme is essential for bone resorption. Thus, inhibition of cathepsin K may provide an effective treatment for diseases of excessive bone loss, including but not limited to, osteoporosis, gingival diseases such as gingivitis and periodontitis, Paget's disease, hypercalcemia of malignancy, and metabolic bone disease. Cathepsin K levels have also been demonstrated to be elevated in chondroclasts of osteoarthritic synovium. Cathepsin K is also expressed in synovial giant cells taken from osteoarthritic patients (Dodds, et al., (1999) Arthritis & Rheumatism, 42, 1588, and Hou, et al., (2002), American Journal of Pathology 159, 2167). Cathepsin K staining is observed in osteoarthritic as well as rheumatoid arthritic samples (Hou, et al., (2002), American Journal of Pathology 159, 2167). The expression of cathepsin K has also been localized to cartilage tissue and a decrease in pH in cartilage correlated with severity of damage (Konttinen, et al., (2002), Arthritis & Rheumatism, 46, 953). This observation, combined with the fact that cathepsin K is an acidic lysosomal protease, strongly suggests a physiological role of cathepsin K in cartilage turnover in addition to bone resorption. These researchers also demonstrated that cathepsin K can degrade aggrecan and type II collagen, the two major protein components of the cartilage matrix. Thus, inhibition of cathepsin K may also be useful for treating diseases of excessive cartilage or matrix degradation, including but not limited to, osteoarthritis and rheumatoid arthritis. Cathepsin K has been shown to be abnormally or
overexpressed in numerous tumors and in prostate cancer (Littlewood-Evans, et al., (1997), Cancer Res., 57, 5386 and Brubaker, et al., (2003), J. Bone Miner. Res., 18, 222). Furthermore, increased levels of bone resorption marker have been detected in bone metastases of prostate cancer suggesting that cathepsin K inhibitor may have utility in preventing metastasis of tumors to bone (Ishikawa, et al., (2001), Mol. Carcinog., 32, 84 and Brubaker, et al., (2003), J. Bone Miner. Res., 18, 222). Metastatic neoplastic cells also typically express high levels of other proteolytic enzymes such as cathepsin B, S and L that degrade the surrounding matrix. Thus, inhibition of cathepsin K may also be useful for treating certain tumors and neoplastic diseases.

Cathepsin S has been implicated in several diseases including immune and auto-immune disorders, rheumatoid arthritis, inflammation, inflammatory bowel disease, myasthenia gravis, atherosclerosis, lymphoproliferative diseases, cancer, for example pancreatic cancer, metastasis (Lecaille, et al., (2002) Chem. Rev. 102, 4459 and Liu, et al., (2004), Arterioscler Throm Vase Biol. 24, 1359). Cathepsin S is thought to play a role in invariant chain degradation and antigen presentation and cathepsin S null mice have been shown to have a diminished collagen-induced arthritis (Nakagawa, et al., (1999) Immunity, 10, 207) suggesting its potential role in rheumatoid arthritis.

Cathepsin B has been implicated in immune and auto-immune disorders, rheumatoid arthritis, inflammation, inflammatory bowel disease, myasthenia gravis, osteoarthritis, lymphoproliferative diseases, cancer, for example pancreatic cancer, metastasis (Lecaille, et al., (2002) Chem. Rev. 102, 4459 and Lang, et al., (2000), J. Rheumatol. 27, 1970). Cathepsin B has been implicated in the processing of invariant chain (Zhang, et al., (2000) Immunology, 100, 13) suggesting its role in immune disorders such as those listed above. Cathepsin B is one of the most highly expressed cysteine protease in cartilage and inhibitors of cathepsin B has been shown to inhibit cartilage degradation. Cathepsin B may contribute to matrix degradation through cleavage of aggrecan and collagen, two components of cartilage matrix (Mort et al., (1998), Biochem. J., 335, 491). Additionally,
cathepsin B could contribute to the mechanical loading component of osteoarthritis by cleaving lubricin, an abundant lubricating protein in synovial fluid. Cleavage of lubricin by cathepsin B has been shown to increase the coefficient of friction in synovial fluid and intact joints (Elsaid, K.A. et al. (2005), Transactions of the Orthopedic Research Society, 51st Annual Meeting, Abstract 924). These data suggest potential for cathepsin B inhibitors in osteoarthritis.

In view of the number of pathological responses and conditions that are mediated by cathepsins K, L, S and B, there is a need for inhibitors of these cathepsins which can be used in the treatment of a variety of conditions.

WO 2005/085210 A1 discloses certain fused bicyclic pyrimidine compounds as inhibitors of cathepsin K, useful in the treatment of bone diseases such as osteoporosis and the like. WO 2005/103012 A1 discloses certain hydrazine-heterocyclic nitrile compounds as inhibitors of cathepsin K, useful in the treatment of bone diseases such as osteoporosis and the like.

**SUMMARY OF THE INVENTION**

The invention is directed to novel heteroaryl nitrile derivatives and their use as protease inhibitors, more specifically inhibitors of cysteine protease, even more specifically inhibitors of cysteine proteases of the papain superfamily. In one aspect of the invention the cysteine proteases are those of the falcipain family, for example falcipain-2 and falcipain-3, which are examples of cysteine proteases indicated in malaria. In another aspect of the invention the cysteine proteases are those of the cathepsin family for example cathepsins K, L, S and B, which is a cysteine protease indicated for example in conditions characterised by excessive bone loss such as osteoporosis and bone metastasis, and other bone and joint diseases such as osteoarthritis. The compounds of the invention may also have utility as serine protease inhibitors.

The invention involves the compounds represented hereinbelow, pharmaceutical compositions comprising such compounds and use of the compounds as protease inhibitors.

**DETAILED DESCRIPTION OF THE INVENTION**

The present invention provides at least one chemical entity selected from compounds of Formula I:
Wherein:

$R^4$ represents halogen;

$R^2$ represents -phenyl-$C^a$alkylene-$X$, -pyridyl-phenyl-$d$-alkylene-$X$ or -phenyl-$d$-$3$alkylene-$X$-$R^J$,

wherein phenyl is optionally substituted with one group selected from halogen or $CF_3$;

$R^J$ represents $Z$, -$C_{1-3}$alkylene-$Z$ or -$C(O)Z$;

$X$ and $Z$ independently represent a monocyclic 6-membered, saturated hydrocarbon group containing one or two nitrogen atoms and optionally an oxygen atom, which is optionally substituted with a group selected from: $C_{1-4}$alkyl, $C_{1-4}$alkylOH, OH and $NR^ER^F$;

$R^E$ and $R^F$ independently represent hydrogen or $C_{1-4}$alkyl;

and pharmaceutically acceptable derivatives thereof.

In respect of compounds of Formula I and pharmaceutically acceptable derivatives thereof: in one embodiment of the invention, $R^4$ represents chlorine, bromine or iodine. In another embodiment, $R^4$ represents chlorine or bromine. In a further embodiment, $R^4$ represents bromine.

In respect of compounds of Formula I and pharmaceutically acceptable derivatives thereof: in one embodiment of the invention $R^2$ represents -pyridyl-phenyl-$d$-$3$alkylene-$X$ or -phenyl-$C_{1-3}$alkylene-$X$-$R^J$, wherein phenyl is optionally substituted with one group selected from halogen or $CF_3$. In another embodiment, $R^2$ represents -phenyl-$d$-$3$alkylene-$X$-$R^J$, wherein phenyl is optionally substituted with one group selected from halogen or $CF_3$. In a further embodiment, $R^2$ represents -pyridyl-phenyl-$C_{1-3}$alkylene-$X$, wherein phenyl is optionally substituted with one group selected from halogen or $CF_3$. In a yet further embodiment, $R^2$ represents -phenyl-$C_{1-3}$alkylene-$X$, wherein phenyl is optionally substituted with one group selected from halogen or $CF_3$. In one embodiment, the alkylene group or groups in $R^2$ is methylene. In one embodiment, wherein a phenyl group in $R^2$ is optionally substituted, the optional substituent is fluorine. In another embodiment, wherein the phenyl group in $R^2$ is unsubstituted. In one embodiment, the groups directly
bonded to the phenyl group in \( R^2 \) (excluding optional substituents) are in *para* orientation relative to one another. In another embodiment, the groups directly bonded to the phenyl group in \( R^2 \) (excluding optional substituents) are in *meta* orientation relative to one another. In one embodiment, where \( R^2 \) contains a pyridyl group, the groups directly bonded to the pyridyl group (excluding optional substituents) are in *para* orientation relative to one another. In another embodiment, where \( R^2 \) contains a pyridyl group, the groups directly bonded to the pyridyl group (excluding optional substituents) are in *meta* orientation relative to one another.

In respect of compounds of Formula I and pharmaceutically acceptable derivatives thereof: in one embodiment of the invention, \( R^1 \) represents \( Z \). In another aspect, \( R^1 \) represents \(-C_{1,3}\)alkylene-\( Z \). In a further aspect, \( R^1 \) represents \(-C(O)Z\).

In respect of compounds of Formula I and pharmaceutically acceptable derivatives thereof: in one embodiment of the invention, \( X \) represents piperidine, piperazine or morpholine, each of which is optionally substituted. In another embodiment, \( X \) represents piperidine or piperazine, each of which is optionally substituted. In a further embodiment, \( X \) represents piperidine which is optionally substituted. In one embodiment, \( X \) is unsubstituted.

In respect of compounds of Formula I and pharmaceutically acceptable derivatives thereof: in one embodiment of the invention, \( Z \) represents piperidine, piperazine or morpholine, each of which is optionally substituted. In another embodiment, \( Z \) represents piperidine or piperazine, each of which is optionally substituted. In a further embodiment, \( Z \) represents piperazine which is optionally substituted. In one embodiment, \( Z \) is unsubstituted.

In respect of compounds of Formula I and pharmaceutically acceptable derivatives thereof: in one embodiment of the invention, \( X \) is optionally substituted with \( C_{1,4} \)alkyl (for example, methyl), \( C_{1,4} \)alkylOH, OH or \( NR^E \)R^F. In another embodiment, \( X \) is optionally substituted with \( NR^E \)R^F. In another embodiment, \( Z \) is optionally substituted with \( C_{1,4} \)alkyl. In a further embodiment, \( Z \) is optionally substituted with methyl.

In respect of compounds of Formula I and pharmaceutically acceptable derivatives thereof: in one embodiment of the invention, \( R^E \) and \( R^F \) represent \( C_{1,4} \)alkyl. In another embodiment, \( R^E \) and \( R^F \) represent ethyl.

The meaning of any functional group or substituent thereon at any one occurrence in Formula I or any subformula thereof, is independent of its meaning, or any other functional group’s or substituent’s meaning, at any other occurrence, unless stated otherwise.
It is to be understood that the present invention covers all combinations of the groups according to different aspects of the invention as described hereinabove.

In an alternative embodiment the invention provides at least one chemical entity chosen from compounds of Formula IA:

Wherein:

\[ \text{R}^1 \text{ represents } \mathrm{C}_{1-8} \text{alkyl, } \mathrm{C}_{1-8} \text{alkyleneNR}^F, \mathrm{C}_{1-8} \text{alkyleneNR}^G \text{C(O)OCi}^\text{alkyl, } \mathrm{C}_{1-8} \text{alkyleneNR}^G \text{C(O)C}_{1-6} \text{alkyl or } \mathrm{C}_{1-8} \text{alkylene-cycloalkyl; } \]

\[ \text{R}^3 \text{ represents hydrogen, } \mathrm{C}_{1-3} \text{alkyl, alkoxy, or } \text{-C(O)Oalkyl; } \]

\[ \text{R}^4 \text{ represents hydrogen, halogen, alkoxy, } \text{-CΞC-aryl, } \text{-NHC}_{1-3} \text{alkylene-aryl, } \text{NO}_2, \text{CF}_3, \text{or OCF}_3; \]

provided that \( \text{R}^3 \) and \( \text{R}^4 \) are not both hydrogen, and when \( \text{R}^3 \) is \( \mathrm{C}_{1-3} \text{alkyl} \) then \( \text{R}^4 \) is other than hydrogen;

\[ \text{and } \]

a) \( \text{A represents } \text{C(O) and } \]

\[ \text{i) } \text{R}^2 \text{ represents } \text{R}^{2a} \text{ or } \text{R}^{2b} \text{ wherein } \]

\[ \text{R}^{2a} \text{ represents } \text{-NR}^H \text{-aryl, } \text{-NR}^H \text{-heteroaryl, } \text{-NR}^H \text{-aryl-heteroaryl or } \text{-NR}^H \text{-heteroaryl-aryl; and } \]

\[ \text{R}^{2b} \text{ represents } \text{-C}_{1-8} \text{alkyleneR}^A, \text{aryl, biaryl, -aryl-heteroaryl, -heteroaryl-aryl, -aryl-heterocyclyl, -aryl-C^\text{alkylene-heterocyclyl, -aryl-O-Ci}_2 \text{alkylene-heterocyclyl, -aryl-Ci-salkylene-heteroaryl, -aryl-heteroaryl-d-salkylene-heterocyclyl, -heteroaryl-aryl-C^\text{alkylene-heterocyclyl, aryloxy, heteroaryl, cycloalkyl, -cycloalkyl-aryl, cycloalkyloxy, heterocyclyl, -NR}^H \text{-aryl-heterocyclyl, } } \]
NR^1^2-cycloalkyl, -N(R^B_)C_1^6^6alkyleneR^c_, -NH-N(C_1^3^3alkyl)-heteroaryl,
-OC_1^6^6alkyleneR^D_, -OCvzalkenyl, -aryl-Ci.alkylene-heterocyclyl-R^j_,
-aryl-C_1^3^3alkylene-heteroaryl-R^K_, C_1^3^3alkylene(NH_2_)-aryl or -aryl-Ci.alkylene-
NH-Ci.alkylene-OH;

and

R^5_ represents hydrogen, C_1^6^6alkyl, C_1^6^6alkenyl, -C(O)R^2_2_, -Ci.alkylene-
heterocyclyl, -C_1^2^2alkyleneNR^GOC(O)C_1^6^6alkyl, -C_1^3^3alkyleneNR^GOC(O)OC_1^6^6alkyl,
-C_1^2^2alkyleneNR^F_ R^F_, N-phthalidimido-C_1^6^6alkylene- or -C(O)C_1^6^6alkyl;

or

ii) R^2_ and R^5_ together with the carbon and nitrogen atoms to which they are
respectively attached form a group selected from

\[ \text{or} \]

b) A represents -SO^2_2_ and

R^2_ represents Ci.alkyl, aryl, C_1^6^6aralkyl or -C^alkyleneheterocyclyl;

and

R^5_ represents hydrogen, C_1^6^6alkyl, C_1^6^6alkenyl, -d_i.alkylene-heterocyclyl,
-C^alkylenertNC(O)Cvzalkenyl, -Ci.alkyleneNR^GOC(O)OC_1^6^6alkyl, -C_1^3^3alkyleneNR^EF_F_, N-
phthalidimido-C_1^6^6alkylene- or -C(O)C_1^6^6alkyl;

R^A_, R^c_ and R^D_ independently represent hydrogen, halogen, -NR^EF_F_, cyano, CCl_3_,
-C(O)C_1^6^6alkyl, C_1^3^3alkyl, cycloalkyl, heterocyclyl, aryl, biaryl, -aryl-heteroaryl, -aryl-Ci.
_3alkylene-heterocyclyl, -aryl-O-C_1^3^3alkylene-heterocyclyl, -Cl_3^3alkenylnary, heteroaryl,
C_1^6^6aralkyl, -NHC(O)C_1^6^6alkyl, -NHC(O)OC_1^6^6alkyl, -NHC(O)C_1^6^6aralkyl or
-NHC(O)OCi.6aralkyl;

R^B_ represents hydrogen or d_i.alkyl;
R\text{E} and R\text{F} independently represent hydrogen or \text{d-3} alkyl; or R\text{E} represents cycloalkyl and R\text{F} represents hydrogen; or R\text{E} and R\text{F} together with the nitrogen atom to which they are attached form a 5- or 6-membered heterocyclic ring;

5 \text{R}\text{G} represents hydrogen or C\text{1-3} alkyl;

\text{R}\text{H} represents hydrogen, C\text{1-8} alkyl, -C\text{1-8} alkylenne\text{R}\text{E}\text{R}\text{F}, -C\text{1-8} alkylenne\text{NHC(O)C}_{\text{1-6}}\text{alkyl}, or -C\text{1-8} alkylenne\text{NHC(O)OC}_{\text{1-4}}\text{alkyl};

10 \text{R}\text{J} represents aryl, heteroaryl, heterocycl, -C\text{1-3} alkylenne(aryl)\text{2}, -C\text{1-3} alkylenne-heteroaryl, -C\text{1-3} aralkyl, -C\text{1-3} alkylenne-C(O)-heterocycl, -O-C\text{1-6}\text{alkyl}-salkylene-aryl, or -0-C(O)C\text{1-3} alkylenne-aryl;

\text{R}\text{K} represents one or two aryl substituents;

15 and salts and solvates thereof.

In another alternative embodiment the invention provides at least one chemical entity chosen from compounds of Formula I/8

20

Wherein:

25 \text{R}\text{1} represents C\text{1-alkyl}, -C\text{1-8} alkylenne\text{R}\text{E}\text{R}\text{F}, -C\text{1-8} alkylenne\text{NHC(O)C}_{\text{1-6}}\text{alkyl}, -C\text{1-8} alkylenne\text{NHC(O)OC}_{\text{1-4}}\text{alkyl} or -C\text{1-8} alkylenne-cycloalkyl;

\text{R}\text{3} represents hydrogen, C\text{1-3} alkyl, alkoxy, or -C(O)Oalkyl;

30 \text{R}\text{4} represents hydrogen, halogen, alkoxy, -C\text{1-8} aryl, -NHC\text{1-3} salkylene-aryl, NO\text{2}, CF\text{3}, or OCF\text{3};

provided that \text{R}\text{3} and \text{R}\text{4} are not both hydrogen, and when \text{R}\text{3} is C\text{1-3} alkyl then \text{R}\text{4} is other than hydrogen;
and

a) A represents C(O) and

i) $R^2$ represents $R^{2a}$ or $R^{2b}$ wherein

$R^{2a}$ represents -NRH-aryl, -NRH-heteroaryl, -NRH-aryl-heteroaryl or -NRH-heteroaryl-aryl; and

$R^{2b}$ represents -d-alkylene$A$, aryl, biaryl, -aryl-heteroaryl, -heteroaryl-aryl, -aryl-heterocyclyl, -aryl-d-alkylene-heterocyclyl, -heteroaryl-d-salkylene-heterocyclyl, -aryl-O-d-salkylene-heterocyclyl, -aryl-$C_{1-3}$alkylene-heteroaryl, -aryl-heteroaryl-$d$-alkylene-heterocyclyl, -heteroaryl-aryl-d-salkylene-heterocyclyl, aryloxy, heteroaryl, cycloalkyl, -cycloalkyl-aryl, cycloalkyloxy, heterocyclyl, -NRH-aryl-heterocyclyl, -NRH-cycloalkyl, -N(RB)$C_6$alkylene$R^c$, -NH-N($C_1-3$alkyl)-heteroaryl, -OC$_1$-alkylene$R^D$, -OC$_i$-$\alpha$alkenyln, -aryl-d-salkylene-heterocyclyl-$R^J$, -aryl-$C_{1-3}$alkylene-heteroaryl-$R^K$, $C_{1-3}$alkylene(NH$_2$)-aryl, or -aryl-d-3alkylene-NH-d-3alkylene-OH;

and

$R^5$ represents hydrogen, $C_{1-6}$alkyl, $C_{1-6}$alkenyln, -C(O)$R^{2a}$, -C$^\alpha$alkylene-heterocyclyl, -$C_{1-6}$alkyleneNR$^G$C(O)$C_{1-6}$alkyl, -d-$\alpha$alkyleneNR$^G$C(O)Od-$\alpha$alkyl, -$C_{1-8}$alkyleneNR$^E$R$^F$, N-phthalidimido-$d$-$\alpha$alkylene- or -C(O)Ci$_i$-$\alpha$alkyl;

or

ii) $R^2$ and $R^5$ together with the carbon and nitrogen atoms to which they are respectively attached form a group selected from

or

b) A represents -SO$_2$- and

$R^2$ represents $C_{1-6}$alkyl, aryl, d-$\alpha$aralkyl or -d-$\alpha$alkyleneheterocyclyl;
and

\[ R^5 \text{ represents hydrogen, C}_{1-6} \text{ alkyl, C}_{1-6} \text{ alkenyl, -C}^\text{alkylene-heterocyclyl,} \]
\[-C_{1-8} \text{ alkyleneNR} \text{G} C(O)C_{1-6} \text{ alkyl, -C}_{1-8} \text{ alkyleneNR} \text{G} C(O)OC_{1-6} \text{ alkyl, -C}_{1-6} \text{ alkyleneNR} \text{E} R^F, \text{N-} \]
\[ \text{phthalimidido-C}^\text{ealkylene- or -C(O)C}_{1-6} \text{ alkyl;} \]
\[ R^A, R^C \text{ and } R^D \text{ independently represent hydrogen, halogen, -NR}^E R^F, \text{cyano, CCl}_3, \]
\[-\text{C(O)C}_{1-6} \text{ alkyl, C}^\text{alkyl, cycloalkyl, heterocyclyl, aryl, biaryl, -aryl-heteroaryl, -aryl-C}^\text{3alkylene-heterocyclyl,} \]
\[-\text{aryl-O-C}^\text{vsalkylene-heterocyclyl,} \text{-C}_{1-3} \text{alkenylyaryl, heteroaryl,} \]
\[ C_{1-6} \text{ aralkyl, -NHC(O)C}_{1-6} \text{ alkyl, -NHC(O)OC}_{1-6} \text{ alkyl, -NHC(O)C}_{1-6} \text{ aralkyl or} \]
\[ -\text{NHC(O)OC}_{1-6} \text{ aralkyl;} \]

\[ R^B \text{ represents hydrogen or } C_{1-8} \text{ alkyl;} \]

\[ R^E \text{ and } R^F \text{ independently represent hydrogen or } C_{1-3} \text{ alkyl; or } R^E \text{ represents cycloalkyl and} \]
\[ R^F \text{ represents hydrogen; or } R^E \text{ and } R^F \text{ together with the nitrogen atom to which they are} \]
\[ \text{attached form a 5- or 6-membered heterocyclic ring;} \]

\[ R^G \text{ represents hydrogen or C}_{3 \text{alkyl;}} \]

\[ R^H \text{ represents hydrogen, C}_{1-6} \text{ alkyl, -C}_{1-6} \text{ alkyleneNR}^E R^F, -\text{C}_{1-6} \text{ alkyleneNHC(O)C}_{1-4} \text{ alkyl,} \]

\[-\text{C}_{1-3} \text{ aralkyl, -C}_{1-3} \text{ alkylene-C(O)-heterocyclyl,} \text{-O-C(O)C}_{1-3} \text{ alkylene-aryl,} \text{-C(O)-O-C}_{1-3}; \]
\[ \text{-alkylene-aryl or -C}^\text{alkylene-heterocyclyl} \]

\[ R^K \text{ represents one or two aryl substituents;} \]

\[ \text{and salts and solvates thereof.} \]

In respect of compounds of Formula IA, Formula IB and salts and solvates thereof: in one

\[ \text{embodiment of the invention, } R^1 \text{ represents } C_{1-8} \text{ alkyl,} \text{ or -C}^\text{alkylene-cycloalkyl.} \]
\[ \text{In another embodiment, } R^1 \text{ represents isobutyl (2-methylpropyl).} \]
\[ \text{In an alternative} \]
\[ \text{embodiment, } R^1 \text{ represents -methylenecyclopentyl or -methylenecyclohexyl.} \]
\[ \text{In another} \]
\[ \text{embodiment, } R^1 \text{ represents -methylenecyclopentyl.} \]

In respect of compounds of Formula IA, Formula IB and salts and solvates thereof: in one

\[ \text{embodiment of the invention, } R^3 \text{ represents hydrogen, } C_{1-3} \text{ alkyl or -C(O)Oalkyl;} \]
\[ \text{in another} \]
\[ \text{embodiment } R^3 \text{ represents hydrogen.} \]

In respect of compounds of Formula IA, Formula IB and salts and solvates thereof: in one

\[ \text{embodiment of the invention, } R^3 \text{ represents hydrogen, } C_{1-3} \text{ alkyl or -C(O)Oalkyl;} \]
\[ \text{in another} \]
\[ \text{embodiment } R^3 \text{ represents hydrogen.} \]
In respect of compounds of Formula IA, Formula IB and salts and solvates thereof: in one embodiment of the invention, R^4 represents halogen.

In respect of compounds of Formula IA, Formula IB and salts and solvates thereof: in one embodiment of the invention, A represents C(O) and R^2 represents R^{2a} or R^{2b} wherein R^{2a} represents -NR^1 aryl; and R^{2b} represents -C_1^3 alkyleneR^A, aryl, biaryl, -aryl-heteroaryl, -heteroaryl-aryl, -aryl-heterocyclyl, -aryl-C_1^3 alkylene-heterocyclyl, -aryl-O-C_1^3 alkylenecyclyl, aryl-C_1^3 alkylene-heteroaryl, heteroaryl, -cycloalkyl-aryl, -NR^B C_1^3 alkyleneR^C, -OC_1^3 alkylenecyclyl, -aryl-d^alkyl-heteroaryl-heterocyclyl-R^J, -aryl-C_1^3 alkylene-heteroaryl-R^*, C_1^3 alkylene(NH_2)-aryl; and R^5 represents hydrogen, C_1^6 alkyl, C_1^6 alkenyl, or -C^alkyleneNR^E R^F.

In respect of compounds of Formula IA, Formula IB and salts and solvates thereof: in a further embodiment of the invention A represents C(O) and R^2 and R^5 together with the carbon and nitrogen atoms to which they are respectively attached form the group

```
    aryl   \N\N
    \O
```

In respect of compounds of Formula IA, Formula IB and salts and solvates thereof: in a further embodiment of the invention A represents -SO_2; R^2 represents aryl, C_1^6 alkyl or -C^alkyleneheterocyclyl; and R^5 represents hydrogen, d^alkyl, or d^alkenyl.

In respect of compounds of Formula IA, Formula IB and salts and solvates thereof: in one embodiment of the invention R^A, R^C and R^D independently represent hydrogen, aryl, -aryl-d^alkyl-heterocyclyl, -aryl-O-d^alkylenecyclyl-heterocyclyl, or -NHC(O)OC_1^6 alkyl.

In respect of compounds of Formula IA, Formula IB and salts and solvates thereof: in one embodiment of the invention R^B represents C_1^6 alkyl;

In respect of compounds of Formula IA, Formula IB and salts and solvates thereof: in one embodiment of the invention R^E and R^F independently represent hydrogen or C_1^3 alkyl; or R^E and R^F together with the nitrogen atom to which they are attached form a 5- or 6-membered heterocyclic ring;

In respect of compounds of Formula IA, Formula IB and salts and solvates thereof: in one embodiment of the invention R^H represents hydrogen, C_1^6 alkyl, or -C_1^6 alkylenecyclyl-NR^E R^F.
The meaning of any functional group or substituent thereon at any one occurrence in Formula IA or IB or any subformula thereof, is independent of its meaning, or any other functional group's or substituent's meaning, at any other occurrence, unless stated otherwise.

It is to be understood that the present invention covers all combinations of the groups according to different aspects of the invention as described hereinabove.

Terms and Definitions

As used herein, the term "alkyl" as a group or a part of a group refers to a linear or branched alkyl group containing the indicated number of carbon atoms. Examples of such groups include methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, sec-butyl, t-tert-butyl, n-pentyl, isopentyl, neopentyl or hexyl, 3,3-dimethylbutyl and the like.

As used herein, the term "alkylene" as a group or a part of a group refers to a linear or branched saturated hydrocarbon linker group containing the indicated number of carbon atoms. Examples of such groups include methylene, ethylene and the like. In one embodiment, alkylene is methylene.

As used herein, the term "alkenyl" as a group or a part of a group refers to a linear or branched hydrocarbon group containing one or more carbon-carbon double bonds and containing the indicated number of carbon atoms. Examples of such groups include ethenyl, propenyl, butenyl, pentenyl or hexenyl and the like.

As used herein, the term "alkoxy" as a group or a part of a group refers to an -O-alkyl group wherein alkyl is as herein defined. Examples of such groups include methoxy, ethoxy, propoxy, prop-2-oxy, butoxy, but-2-oxy or methylprop-2-oxy, pentoxy, hexoxy and the like.

As used herein, the term "aralkyl" as a group or a part of a group refers to an alkyl group as herein defined which contains the indicated number of carbon atoms, the alkyl group being substituted with an aryl group as herein defined.

As used herein, the term "aryl" as a group or a part of a group refers to an optionally substituted hydrocarbon aromatic group containing one, two or three conjugated or fused rings with at least one ring having a conjugated pi-electron system. Examples of such groups include optionally substituted phenyl, naphthyl or tetrahydronaphthalenyl and the like. In one embodiment aryl represents phenyl. In another embodiment aryl represents naphthyl. In one embodiment aryl moieties are unsubstituted. In another embodiment aryl moieties are monosubstituted, disubstituted or trisubstituted. In a further embodiment
aryl moieties are monosubstituted or disubstituted. Optional aryl substituents include C\textsubscript{1-4}alkyl, C\textsubscript{1-4}alkoxy, halogen, nitro, trihalomethyl, trihalomethoxy, -C(O)CH\textsubscript{3}, -N(C\textsubscript{1-4}alkyl)\textsubscript{2} and -SO\textsubscript{2}C\textsubscript{1-4}alkyl.

As used herein, the term "aryloxy" as a group or a part of a group refers to an -O-aryl group wherein aryl is as herein defined.

As used herein, the term "biaryl" as a group or a part of a group refers to an aryl group which is directly substituted with a second aryl group, wherein aryl is as herein defined.

As used herein, the term "heteroaryl" as a group or a part of a group refers to an optionally substituted aromatic group comprising one to four heteroatoms selected from N, O and S, the aromatic group containing one, two or three 5- or 6-membered conjugated or fused rings with at least one ring having a conjugated pi-electron system. Examples of monocyclic heteroaryl groups (one ring) include optionally substituted thienyl, furyl, furazanyl, pyrrolyl, triazolyl, tetrazolyl, imidazolyl, oxazolyl, thiazolyl, oxadiazolyl, isothiazolyl, isoxazolyl, thiadiazolyl, pyranyl, pyrazolyl, pyrimidyl, pyridazinyl, pyrazinyl, pyridyl, triazinyl, tetrazinyl and the like. Examples of fused aromatic rings include quinolinyl, isoquinolinyl, quinazolinyl, quinoxalinyl, pteridinyl, cinnolinyl, phthalazinyl, naphthyridinyl, indolyl, isoindolyl, azaindolyl, indolizinyl, indazolyl, purinyl, pyrrolopyridinyl, furopyridinyl, benzofuranyl, isobenzofuranyl, benzothienyl, benzoimidazolyl, benzoazolyl, benzoisoxazolyl, benzothiazolyl, benzoxothiazolyl, benzo[d]thiadiazolyl, benzothiadiazolyl, dibenzofuranyl, tetrahydroquinolinyl, tetrahydroisoquinolinyl, benzo[1,3]-dioxole and the like. In one embodiment heteroaryl moieties are pyridyl, imidazolyl, oxazolyl, benzofuranyl, dibenzofuranyl, benzothiazolyl, indolyl or indazolyl. In a further embodiment heteroaryl moieties are pyridyl, imidazolyl, isoxazolyl, benzofuranyl, dibenzofuranyl, benzothiazolyl, indolyl or indazolyl. In a yet further embodiment optionally substituted heteroaryl moieties are benzofuranyl, pyridyl, dibenzofuranyl, imidazolyl and isoxazolyl. In one embodiment heteroaryl moieties are unsubstituted. In another embodiment heteroaryl moieties are monosubstituted, disubstituted or trisubstituted. In a further embodiment heteroaryl moieties are monosubstituted or disubstituted. Optional heteroaryl substituents include C\textsubscript{1-4}alkyl, C\textsubscript{1-4}alkoxy and halogen.

As used herein, the term "cycloalkyl" as a group or a part of a group refers to a saturated cyclic hydrocarbon group of 3 to 7 carbon atoms. Examples of such groups include optionally substituted cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl or cycloheptyl.

As used herein, the term "cycloalkyloxy" as a group or a part of a group refers to an -O-cycloalkyl group wherein cycloalkyl is as herein defined.
As used herein, the terms "heterocycl" or "heterocyclic ring" as a group or a part of

a group refer to i) an optionally substituted, monocyclic 3- to 7-membered, saturated or

partially saturated hydrocarbon group containing one to four heteroatoms selected from N, 

O and S and also ii) to polycyclic groups, e.g. bicyclic and tricyclic groups, which are fused 

rings of optionally substituted, 3- to 7-membered, saturated or partially saturated 

hydrocarbon groups containing one to four heteroatoms selected from N, O and S. 

Examples of monocyclic groups include include pyrroldinyl, azetidinyl, imidazolidinyl, 

oxoimidazolidinyl, pyrazolidinyl, oxazolidinyl, piperidinyl, piperasinyl, morpholinyl, 

thiomorpholinyl, thiazolidinyl, hydantoinyl, valerolactamyl, oxiranyl, oxetanyl, dioxolanyl, 

dioxanyl, oxathiolanyl, oxathianyl, dithianyl, dihydrofuranyl, tetrahydrofuranyl, 
dihydropyranyl, tetrahydropyranyl, tetrahydropyrindinyl, tetrahydropyrimidinyl, 
tetrahydrothiophenyl, dihydropyranyl, pyridinyl, tetrahydroisoquinolinyl, benzodithiophenyl, 

tetrahydrofuranyl, benzopyranyl, benzothiophenyl, dihydrothiophenyl, diazepanyl, azepanyl and the like. Examples of bicyclic groups include indolinyl, isoindolinyl, benzopyran, quinuclidinyl, 2,3,4,5-

tetrahydro-1H-3-benzazepine, tetrahydroisoquinolinyl, hexahydro[p1,2-]pyrazin-2(1H)-yl and the like. In one embodiment heterocycl is an optionally substituted 5- or 6-

membered monocyclic group, or a 9-membered bicyclic group. In another embodiment 

heterocyclyl is an optionally substituted 5- or 6-membered monocyclic group. In a further 

embodiment heterocyclyl moieties are optionally substituted pyrroldinyl, imidazolidinyl, 

piperidinyl, piperasinyl or morpholinyl. In a yet further embodiment heterocyclyl moieties 

are optionally substituted piperasinyl. In one embodiment heterocyclyl moieties are 

unsubstituted. In another embodiment heterocyclyl moieties are monosubstituted, 

disubstituted or trisubstituted or tetrastubstituted. In a further embodiment heterocyclyl 

moieties are monosubstituted. Optional heterocyclyl substituents include C₈₆alkyl, 

-C(O)C₂₄alkyl, -C(O)OC₂₄alkyl, -NC(O)C₂₄alkyl, -NC(O)OC₂₄alkyl, -C(O)NR²C²alkyl, 

-C₁₈alkyleneOH, -C₁₃alkyleneC(O)OC₈₆alkyl, -C₁₃alkylene-O-C₂₃alkyleneOH, -C₁₈ 

alkylene-NH-C₈₆alkyleneOH, -C₁₈alkyleneNR²RF, cyano, hydroxy, -NR²RF, spiroacetal, 

and oxo.

As used herein, the term "halogen" or "halo" refers to a fluorine (fluro), chlorine (chloro), 
bromine (bromo) or iodine (iodo) atom. In one embodiment halogen substituents are a 

fluorine or chlorine atom.

As used herein, the term "N-phthalimido" refers to a phthalimide group which is bonded 

through the nitrogen atom.

As used herein, the term "proteases" are enzymes that catalyze the cleavage of amide 
bonds of peptides and proteins by nucleophilic substitution at the amide bond, ultimately 
resulting in hydrolysis. Proteases include: cysteine proteases, serine proteases, aspartic 

proteases, and metalloproteases. Protease "inhibitors" bind more strongly to the enzyme 

than the substrate and in general are not subject to cleavage after enzyme catalyzed
attack by the nucleophile. They therefore competitively prevent proteases from recognizing and hydrolysing natural substrates and thereby act as inhibitors.

In one aspect of the invention there is provided at least one chemical entity selected from the list:

and pharmaceutically acceptable derivatives thereof.

As used herein, the term "pharmaceutically acceptable derivative", means any pharmaceutically acceptable salt, solvate, or prodrug e.g. ester or carbamate of a compound of Formula I, IA or IB, which upon administration to the recipient is capable of providing (directly or indirectly) a compound of Formula I, IA or IB, or an active metabolite or residue thereof. Such derivatives are recognizable to those skilled in the art, without undue experimentation. Nevertheless, reference is made to the teaching of Burger's Medicinal Chemistry and Drug Discovery, 5th Edition, Vol 1: Principles and Practice, which is incorporated herein by reference to the extent of teaching such derivatives. In one aspect of the invention pharmaceutically acceptable derivatives are salts, solvates, esters and carbamates. In another aspect of the invention pharmaceutically acceptable derivatives are salts, solvates and esters. In a further aspect, pharmaceutically acceptable derivatives are salts and solvates.

The compounds of the present invention may be in the form of and/or may be administered as a pharmaceutically acceptable salt. Indeed, in certain embodiments of the invention, pharmaceutically acceptable salts of the compounds according to Formula I, IA or IB, IA or IB may be preferred over the respective free base or free acid because such salts impart greater stability or solubility to the molecule thereby facilitating formulation into a dosage form. Accordingly, the invention is further directed to pharmaceutically acceptable salts of the compounds according to Formula I, IA or IB.

As used herein, the term "pharmaceutically acceptable salts" refers to salts that retain the desired biological activity of the subject compound and exhibit minimal undesired toxicological effects. For a review on suitable salts see Berge et al, J. Pharm. ScL, 1977, 66, 1-19. The term "pharmaceutically acceptable salts" includes both pharmaceutically acceptable acid addition salts and pharmaceutically acceptable base addition salts. These pharmaceutically acceptable salts may be prepared in situ during the final isolation and purification of the compound, or by separately reacting the purified compound in its free acid or free base form with a suitable base or acid, respectively. The salt may precipitate from solution and be collected by filtration or may be recovered by evaporation of the solvent.

A pharmaceutically acceptable acid addition salt can be formed by reaction of a compound of Formula I, IA or IB with a suitable inorganic or organic acid (such as hydrobromic, hydrochloric, sulfuric, sulfamic, nitric, phosphoric, succinic, maleic,
hydroxymaleic, acrylic, formic, acetic, hydroxyacetic, phenylacetic, butyric, isobutyric, propionic, fumaric, citric, tartaric, lactic, mandelic, benzoic, o-acetoxybenzoic, chlorobenzoic, methylbenzoic, dinitrobenzoic, hydroxybenzoic, methoxybenzoic salicylic, glutamic, stearic, ascorbic, palmitic, oleic, pyruvic, pamoic, malonic, lauric, glutaric aspartic, p-toluensulfonic, benzenesulfonic, methanesulfonic, ethanesulfonic, 2-hydroxyethanesulfonic, naphthalenesulfonic (e.g. 2-naphthalenesulfonic), p-aminobenzenesulfonic (i.e. sulfanilic), hexanoic, heptanoic, or phthalic acid), optionally in a suitable solvent such as an organic solvent, to give the salt which is usually isolated for example by crystallisation and filtration. A pharmaceutically acceptable acid addition salt of a compound of Formula I, IA or IB can comprise or be for example a hydrobromide, hydrochloride, hydroiodide, sulfate, bisulfate, nitrate, phosphate, hydrogen phosphate, succinate, maleate, malate, formate, acetate, trifluoroacetate, saccharate, propionate, fumarate, citrate, tartrate, lactate, benzoate, salicylate, glutamate, aspartate, p-toluensulfonate, benzenesulfonate, methanesulfonate, ethanesulfonate, naphthalenesulfonate (e.g. 2- naphthalenesulfonate), methanesulphonic, ethanesulphonic, p-toluensulphonic, isethionate or hexanoate salt. In one embodiment there is provided the trifluoroacetic acid salts of the compounds of the invention. In another embodiment there is provided the hydrochloric acid salts of the compounds of the invention.

A pharmaceutically acceptable base addition salt can be formed by reaction of a compound of Formula I, IA or IB with a suitable inorganic or organic base (e.g. ammonia, triethylamine, ethanolamine, triethanolamine, choline, arginine, lysine or histidine), optionally in a suitable solvent such as an organic solvent, to give the base addition salt which is usually isolated for example by crystallisation and filtration. Pharmaceutically acceptable base salts include ammonium salts and salts with organic bases, including salts of primary, secondary and tertiary amines, including aliphatic amines, aromatic amines, aliphatic diamines, and hydroxy alkylamines, such as methylamine, ethylamine, isopropylamine, diethylamine, ethylenediamine, ethanolamine, trimethylamine, dicyclohexyl amine, diethanolamine, cyclohexylamine and N-methyl-D-glucamine. Other suitable pharmaceutically acceptable base salts include pharmaceutically acceptable metal salts, for example pharmaceutically acceptable alkali-metal or alkaline-earth-metal salts such as hydroxides, carbonates and bicarbonates of sodium, potassium, lithium, calcium, magnesium, aluminium, and zinc; in particular pharmaceutically acceptable metal salts of one or more carboxylic acid moieties that may be present in the compound of Formula I, IA or IB.

Other non-pharmacologically acceptable salts, for example oxalates may be used, for example in the isolation of compounds of the invention.
The invention includes within its scope all possible stoichiometric and non-stoichiometric forms of the salts of the compounds of Formula I, IA or IB.

As used herein, the term "compounds of the invention" means the compounds according to Formula I, IA or IB and the pharmaceutically acceptable derivatives thereof. The term "a compound of the invention" means any one of the compounds of the invention as defined above.

As used herein the term "at least one chemical entity" means at least one chemical substance chosen from the group of compounds consisting of compounds of Formula I, IA or IB and pharmaceutically acceptable derivatives thereof.

The compounds of the invention may exist as solids or liquids, both of which are included in the invention. In the solid state, the compounds of the invention may exist as either amorphous material or in crystalline form, or as a mixture thereof. It will be appreciated that solvates of the compounds of the invention may be formed wherein solvent molecules are incorporated into the crystalline lattice during crystallisation. Solvates may involve non-aqueous solvents such as ethanol, isopropanol, DMSO, acetic acid, ethanolamine, and ethyl acetate, or they may involve water as the solvent that is incorporated into the crystalline lattice. Solvates wherein water is the solvent that is incorporated into the crystalline lattice are typically referred to as "hydrates." The invention includes all such solvates.

It will be further appreciated that all crystalline forms, polymorphs, geometric isomers, stereoisomers (including enantiomers and diastereomers) and tautomers of the compounds of the invention, or mixtures thereof, are contemplated to be within the scope of the present invention.

According to another aspect of the invention there is provided at least one chemical entity selected from a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof for use in human or veterinary medical therapy.

The compounds of the invention are cysteine protease inhibitors, such as inhibitors of cysteine proteases of the papain superfamily, for example of the falcipain family, including falcipain-2 or falcipain-3. The compounds of the invention are also inhibitors of cysteine proteases of the papain superfamily, for example those of the cathepsin family such as cathepsins K, L, S and B.

The compounds of the invention may be useful for treating conditions in which cysteine proteases are implicated, including infections by *Plasmodium falciparum* which is the most virulent malaria-causing parasite, and by *Plasmodium vivax, Pneumocystis carinii*,
Trypsanoma cruzi, Trypsanoma brucei, and Crithidia fusiculata; as well as in treating conditions such as schistosomiasis, malaria, cancer, tumour invasion and tumor metastasis, metachromatic leukodystrophy, muscular dystrophy, amyrophy, chronic obstructive pulmonary disorder (COPD), atherosclerosis; and especially conditions in which cathepsin K is implicated, including diseases of excessive bone or cartilage loss and other bone and joint diseases such as osteoporosis, bone metastasis, gingival disease (including gingivitis and periodontitis), arthritis (including osteoarthritis and rheumatoid arthritis), Paget's disease; hypercalcemia of malignancy, and metabolic bone disease. In addition, metastatic neoplastic cells also typically express high levels of proteolytic enzymes that degrade the surrounding matrix, and certain tumors and metastatic neoplasias may be effectively treated with the compounds of the invention. Accordingly, the invention is directed to methods of treating such conditions.

In one aspect of the invention, there is provided at least one chemical entity selected from a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof, for use in the treatment of a condition mediated by inhibition of a cysteine protease, particularly inhibition of a cysteine protease of the papain superfamily such as those of the falcipain family, including falcipain-2 or falcipain-3, for example malaria.

In another aspect of the invention, there is provided at least one chemical entity selected from a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof for use in the treatment of a condition mediated by inhibition of a cysteine protease, particularly inhibition of a cysteine protease of the papain superfamily, such as those of the cathepsin family for example cathepsins K, L, S and B, i) in one embodiment cathepsin K, for example conditions characterised by excessive bone loss such as osteoporosis and bone metastasis, and other bone and joint diseases such as osteoarthritis, or ii) in another embodiment cathepsin L or S, for example pancreatic cancer.

In another aspect of the invention there is provided the use of at least one chemical entity selected from a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof in the manufacture of a medicament for the treatment of a condition mediated by inhibition of a cysteine protease, particularly inhibition of a cysteine protease of the papain superfamily such as those of the falcipain family, including falcipain-2 or falcipain-3, for example malaria.

In a further aspect of the invention there is provided the use of at least one chemical entity selected from a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof in the manufacture of a medicament for the treatment of a condition mediated by inhibition of a cysteine protease, particularly inhibition of a cysteine protease of the papain superfamily, such as those of the cathepsin family, for example cathepsins
K, L, S and B, i) in one embodiment cathepsin K, for example conditions characterised by excessive bone loss such as osteoporosis and bone metastasis, and other bone and joint diseases such as osteoarthritis, or ii) in another embodiment cathepsin L or S, for example pancreatic cancer.

In another aspect of the invention there is provided a method for the treatment of a human or animal subject suffering from a condition mediated by inhibition of a cysteine protease, particularly inhibition of a cysteine protease of the papain superfamily such as those of the falcipain family, including falcipain-2 or falcipain-3, for example malaria, which method comprises administering an effective amount of at least one chemical entity selected from a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof or a pharmaceutical composition comprising at least one chemical entity selected from a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof.

In another aspect of the invention there is provided a method for the treatment of a human or animal subject suffering from a condition mediated by inhibition of a cysteine protease, particularly inhibition of a cysteine protease of the papain superfamily, such as those of the cathepsin family, for example cathepsins K, L, S and B, i) in one embodiment cathepsin K, for example conditions characterised by excessive bone loss such as osteoporosis and bone metastasis, and other bone and joint diseases such as osteoarthritis, or ii) in another embodiment cathepsin L or S, for example pancreatic cancer, which method comprises administering an effective amount of at least one chemical entity selected from a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof or a pharmaceutical composition comprising at least one chemical entity selected from a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof.

The compounds of the invention are cysteine protease inhibitors and can be useful in the treatment of a condition mediated by inhibition of a cysteine protease, particularly inhibition of a cysteine protease of the papain superfamily such as those of the falcipain family, including falcipain-2 or falcipain-3, for example in the treatment of malaria, or those of the cathepsin family for example cathepsins K, L, S and B, i) in one embodiment cathepsin K, for example conditions characterised by excessive bone loss such as osteoporosis and bone metastasis, and other bone and joint diseases such as osteoarthritis, or ii) in another embodiment cathepsin L or S, for example pancreatic cancer. Accordingly, the invention is further directed to pharmaceutical compositions comprising at least one chemical entity selected from a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof.
As used herein "excessive bone loss" is a disease state in which the normal balance between bone resorption and formation is disrupted, and there is a net loss of bone at each cycle. Diseases which are characterised by excessive bone loss include, but are not limited to, osteoporosis and gingival diseases, excessive cartilage or matrix degradation including osteoarthritis and rheumatoid arthritis.

The methods of treatment of the invention comprise administering a safe and effective amount of at least one chemical entity selected from a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof, or a pharmaceutical composition containing at least one chemical entity selected from a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof, to a patient in need thereof.

As used herein, "treatment" means: (1) the amelioration or prevention of the condition being treated or one or more of the biological manifestations of the condition being treated, (2) the interference with (a) one or more points in the biological cascade that leads to or is responsible for the condition being treated or (b) one or more of the biological manifestations of the condition being treated, or (3) the alleviation of one or more of the symptoms or effects associated with the condition being treated. The skilled artisan will appreciate that "prevention" is not an absolute term. In medicine, "prevention" is understood to refer to the prophylactic administration of a drug to substantially diminish the likelihood or severity of a condition or biological manifestation thereof, or to delay the onset of such condition or biological manifestation thereof.

As used herein, "safe and effective amount" means an amount of the compound sufficient to significantly induce a positive modification in the condition to be treated but low enough to avoid serious side effects (at a reasonable benefit/risk ratio) within the scope of sound medical judgment. A safe and effective amount of a compound of the invention will vary with the particular compound chosen (e.g. depending on the potency, efficacy, and half-life of the compound); the route of administration chosen; the condition being treated; the severity of the condition being treated; the age, size, weight, and physical condition of the patient being treated; the medical history of the patient to be treated; the duration of the treatment; the nature of concurrent therapy; the desired therapeutic effect; and like factors, but can nevertheless be routinely determined by the skilled artisan.

As used herein, "patient" refers to a human or other animal.

The compounds of the invention may be administered by any suitable route of administration, including both systemic administration and topical administration. Systemic administration includes oral administration, parenteral administration, transdermal administration, rectal administration, and administration by inhalation. Parenteral administration refers to routes of administration other than enteral,
transdermal, or by inhalation, and is typically by injection or infusion. Parenteral administration includes intravenous, intramuscular, and subcutaneous injection or infusion. Inhalation refers to administration into the patient's lungs whether inhaled through the mouth or through the nasal passages. Topical administration includes application to the skin as well as intraocular, optic, intravaginal, and intranasal administration.

The compounds of the invention may be administered once or according to a dosing regimen wherein a number of doses are administered at varying intervals of time for a given period of time. For example, doses may be administered one, two, three, or four times per day. Doses may be administered until the desired therapeutic effect is achieved or indefinitely to maintain the desired therapeutic effect. Suitable dosing regimens for a compound of the invention depend on the pharmacokinetic properties of that compound, such as absorption, distribution, and half-life, which can be determined by the skilled artisan. In addition, suitable dosing regimens, including the duration such regimens are administered, for a compound of the invention depend on the condition being treated, the severity of the condition being treated, the age and physical condition of the patient being treated, the medical history of the patient to be treated, the nature of concurrent therapy, the desired therapeutic effect, and like factors within the knowledge and expertise of the skilled artisan. It will be further understood by such skilled artisans that suitable dosing regimens may require adjustment given an individual patient's response to the dosing regimen or over time as individual patient needs change.

Typical daily dosages may vary depending upon the particular route of administration chosen. Typical daily dosages for oral administration range from about 0.01 to about 25 mg/kg, in one embodiment from about 0.1 to about 14 mg/kg. Typical daily dosages for parenteral administration range from about 0.001 to about 10 mg/kg; in one embodiment from about 0.01 to about 6 mg/kg. The compounds of Formula I, IA or IB may also be used in combination with other therapeutic agents. The invention thus provides, in a further aspect, a combination comprising a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof together with a further therapeutic agent. When a compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof is used in combination with a second therapeutic agent active against the same disease state the dose of each compound may differ from that when the compound is used alone. Appropriate doses will be readily appreciated by those skilled in the art. It will be appreciated that the amount of a compound of the invention required for use in treatment will vary with the nature of the condition being treated and the age and the condition of the patient and will be ultimately at the discretion of the attendant physician or veterinarian.
The compounds of the present invention may be used alone or in combination with one or more additional active agents, such as other inhibitors of cysteine and serine proteases, antimalarial drugs or drugs to treat excessive bone loss.

Such other active agents include inhibitors of bone resorption or other bone diseases, for example bisphosphonates (i.e., alendronate, risedronate, etidronate, and ibandronate), hormone replacement therapy, anti-estrogens, calcitonin, and anabolic agents such as bone morphogenic protein, iroprofavone, and PTH. In the alternative, such other active agents include antimalarial drugs, such as folates (e.g. chloroquine, mefloquine, primaquine pyrimethamine, quinine artemisinin, halofantrine, doxycycline, amodiquine, atovaquine [atovaquone], tafenoquine) and antifolates (e.g. dapsone, proguanil, sulfadoxine, pyrimethamine, chlorcycloguanil, cycloguanil) or antibacterial drugs such as azithromycin, doxycycline, ciprofloxacin and clindamycin. In another alternative, such other active agents include anti-cancer agents.

The combinations referred to above may conveniently be presented for use in the form of a pharmaceutical formulation and thus pharmaceutical formulations comprising a combination as defined above together with a pharmaceutically acceptable carrier or excipient comprise a further aspect of the invention. The individual components of such combinations may be administered either sequentially or simultaneously in separate or combined pharmaceutical formulations by any convenient route.

When administration is sequential, either the compound of the present invention or the second therapeutic agent may be administered first. When administration is simultaneous, the combination may be administered either in the same or different pharmaceutical composition. When combined in the same formulation it will be appreciated that the two compounds must be stable and compatible with each other and the other components of the formulation. When formulated separately they may be provided in any convenient formulation, conveniently in such manner as are known for such compounds in the art.

**Compositions**

The compounds of the invention will normally, but not necessarily, be formulated into pharmaceutical compositions prior to administration to a patient. In one aspect, the invention is directed to pharmaceutical compositions comprising a compound of the invention. In another aspect the invention is directed to pharmaceutical compositions comprising a compound of the invention and a pharmaceutically acceptable carrier and/or excipient. The carrier and/or excipient must be "acceptable" in the sense of being compatible with the other ingredients of the formulation and not deleterious to the recipient thereof.
The pharmaceutical compositions of the invention may be prepared and packaged in bulk form wherein a safe and effective amount of a compound of the invention can be extracted and then given to the patient such as with powders or syrups. Alternatively, the pharmaceutical compositions of the invention may be prepared and packaged in unit dosage form wherein each physically discrete unit contains a safe and effective amount of a compound of the invention. When prepared in unit dosage form, the pharmaceutical compositions of the invention typically contain from about 0.5 mg to about 1750 mg, e.g. from about 5 mg to about 1000 mg for oral dosage forms and from about 0.05 mg to about 700 mg, e.g. from about 0.5 mg to about 500 mg for parenteral dosage forms.

The pharmaceutical compositions of the invention typically contain one compound of the invention. However, in certain embodiments, the pharmaceutical compositions of the invention contain more than one compound of the invention. For example, in certain embodiments the pharmaceutical compositions of the invention contain two compounds of the invention. In addition, the pharmaceutical compositions of the invention may optionally further comprise one or more additional pharmaceutically active compounds. Conversely, the pharmaceutical compositions of the invention typically contain more than one pharmaceutically acceptable excipient. However, in certain embodiments, the pharmaceutical compositions of the invention contain one pharmaceutically acceptable excipient.

As used herein, the term "pharmaceutically acceptable" means suitable for pharmaceutical use.

The compound of the invention and the pharmaceutically acceptable excipient or excipients will typically be formulated into a dosage form adapted for administration to the patient by the desired route of administration. For example, dosage forms include those adapted for (1) oral administration such as tablets, capsules, caplets, pills, troches, powders, syrups, elixers, suspensions, solutions, emulsions, sachets, and cachets; (2) parenteral administration such as sterile solutions, suspensions, and powders for reconstitution; (3) transdermal administration such as transdermal patches; (4) rectal administration such as suppositories; (5) inhalation such as aerosols and solutions; and (6) topical administration such as creams, ointments, lotions, solutions, pastes, sprays, foams, and gels.

Suitable pharmaceutically acceptable excipients will vary depending upon the particular dosage form chosen. In addition, suitable pharmaceutically acceptable excipients may be chosen for a particular function that they may serve in the composition. For example, certain pharmaceutically acceptable excipients may be chosen for their ability to facilitate the production of uniform dosage forms. Certain pharmaceutically acceptable excipients may be chosen for their ability to facilitate the production of stable dosage forms. Certain
pharmaceutically acceptable excipients may be chosen for their ability to facilitate the carrying or transporting the compound or compounds of the invention once administered to the patient from one organ, or portion of the body, to another organ, or portion of the body. Certain pharmaceutically acceptable excipients may be chosen for their ability to enhance patient compliance.

Suitable pharmaceutically acceptable excipients include the following types of excipients: binders, disintegrants, lubricants, glidants, granulating agents, coating agents, wetting agents, solvents, co-solvents, suspending agents, emulsifiers, sweeteners, flavoring agents, flavor masking agents, coloring agents, anticaking agents, humectants, chelating agents, plasticizers, viscosity increasing agents, antioxidants, preservatives, stabilizers, surfactants, and buffering agents. The skilled artisan will appreciate that certain pharmaceutically acceptable excipients may serve more than one function and may serve alternative functions depending on how much of the excipient is present in the formulation and what other ingredients are present in the formulation.

Skilled artisans possess the knowledge and skill in the art to enable them to select suitable pharmaceutically acceptable excipients in appropriate amounts for use in the invention. In addition, there are a number of resources that are available to the skilled artisan which describe pharmaceutically acceptable excipients and may be useful in selecting suitable pharmaceutically acceptable excipients. Examples include Remington's Pharmaceutical Sciences (Mack Publishing Company), The Handbook of Pharmaceutical Additives (Gower Publishing Limited), and The Handbook of Pharmaceutical Excipients (the American Pharmaceutical Association and the Pharmaceutical Press).

The pharmaceutical compositions of the invention are prepared using techniques and methods known to those skilled in the art. Some of the methods commonly used in the art are described in Remington's Pharmaceutical Sciences (Mack Publishing Company).

In one aspect, the invention is directed to a solid or liquid oral dosage form such as a liquid, tablet, lozenge or a capsule, comprising a safe and effective amount of a compound of the invention and a carrier. The carrier may be in the form of a diluent or filler. Suitable diluents and fillers in general include lactose, sucrose, dextrose, mannitol, sorbitol, starch (e.g. corn starch, potato starch, and pre-gelatinized starch), cellulose and its derivatives (e.g. microcrystalline cellulose), calcium sulfate, and dibasic calcium phosphate. A liquid dosage form will generally consist of a suspension or solution of the compound or salt in a liquid carrier for example, ethanol, olive oil, glycerine, glucose (syrup) or water (e.g. with an added flavouring, suspending, or colouring agent). Where the composition is in the form of a tablet or lozenge, any pharmaceutical carrier routinely used for preparing solid formulations may be used. Examples of such carriers include magnesium stearate, terra alba, talc, gelatin, acacia, stearic acid, starch, lactose and
sucrose. Where the composition is in the form of a capsule, any routine encapsulation is suitable, for example using the aforementioned carriers or a semi solid e.g. mono di-glycerides of capric acid, Gelucire™ and Labrasol™, or a hard capsule shell e.g gelatin. Where the composition is in the form of a soft shell capsule e.g. gelatin, any pharmaceutical carrier routinely used for preparing dispersions or suspensions may be considered, for example aqueous gums or oils, and may be incorporated in a soft capsule shell.

An oral solid dosage form may further comprise an excipient in the form of a binder. Suitable binders include starch (e.g. corn starch, potato starch, and pre-gelatinized starch), gelatin, acacia, sodium alginate, alginic acid, tragacanth, guar gum, povidone, and cellulose and its derivatives (e.g. microcrystalline cellulose). The oral solid dosage form may further comprise an excipient in the form of a disintegrant. Suitable disintegrants include crospovidone, sodium starch glycolate, croscarmelose, alginic acid, and sodium carboxymethyl cellulose. The oral solid dosage form may further comprise an excipient in the form of a lubricant. Suitable lubricants include stearic acid, magnesium stearate, calcium stearate, and talc.

There is further provided by the present invention a process of preparing a pharmaceutical composition, which process comprises mixing at least one compound of Formula I, IA or IB or a pharmaceutically acceptable derivative thereof, together with a pharmaceutically acceptable carrier and/or excipient.

Preparations for oral administration may be suitably formulated to give controlled/extended release of the active compound.

All publications, including but not limited to patents and patent applications cited in this specification are herein incorporated by reference as if each individual publication were specifically and individually indicated to be incorporated by reference as though fully set forth.

**Abbreviations**

In describing the invention, chemical elements are identified in accordance with the Periodic Table of the Elements. Abbreviations and symbols utilized herein are in accordance with the common usage of such abbreviations and symbols by those skilled in the chemical arts. The following abbreviations are used herein:

Compound Preparation
The general procedures used to synthesise the compounds of Formula IA are described in reaction Schemes 1-15 and are illustrated in the Examples. It will be readily apparent to those skilled in the art that compounds of Formula IB and compounds of Formula I may be synthesised according to the same as, or analogous procedures to those described hereinbelow for Formula IA.

Throughout the specification, general formulae are designated by Roman numerals IA, II, III, IV etc. Subsets of compounds of Formula IA are defined as Ia, Ib(i), Ib(ii), Ib(iii), Ib(iv), Ib(v), Ic, Ic(i), and Id.

The semicarbazide compounds of Formula Ia, which are compounds of Formula IA wherein, R^3 and R^4 are as defined above for Formula IA, R^1 is C_{1-8}alkyl, -C\_8alkyleneN(C\_1-3alkyl)_2, -C\_1-8alkyleneNR\_G(C\_O)OC\_6alkyl or -C\_1-8alkyleneNR\_G(C\_O)C\_1-8alkyl, A is C\(\_\)O, R^5 is hydrogen, C\_alkyl, C\_alkenyl, -C\_8alkyleneN(C\_1-3alkyl)_2, -C\_1-8alkyleneNR\_G(C\_O)OC\_1-8alkyl or -C\_1-8alkyleneNR\_G(C\_O)C\_1-8alkyl and R^2 is -NR^H-aryl-heterocycl, -NR^Hcycloalkyl, -NR^BGC\_1-8alkyleneR^c, -NH-N(C\_1-3alkyl)-heteroaryl, -NR^H-aryl, -NR^H-heteroaryl, -NR^H-aryloxy, or -NR^H-heteroaryl-aryl; in which R^H is as defined above for Formula IA, may be prepared from the corresponding hydrazine compounds of Formula II, wherein R^3 and R^4 are as defined above for Formula IA, R^1 is C\_1-8alkyl, -C\_1-8alkyleneN(C\_1-3alkyl)_2, -C\_1-8alkyleneNR\_G(C\_O)OC\_1-8alkyl or -C\_1-8alkyleneNR\_G(C\_O)C\_1-8alkyl and R^5 is hydrogen, C\_alkyl, C\_alkenyl, -C\_8alkyleneN(C\_1-3alkyl)_2, -C\_1-8alkyleneNR\_G(C\_O)OC\_1-8alkyl or -C\_1-8alkyleneNR\_G(C\_O)C\_1-8alkyl, according to Scheme 1. This transformation may be carried out following one of two different procedures, procedure A or procedure B.

Procedure A: Compounds of Formula Ia, which are compounds of Formula II, wherein R^5 is hydrogen, are reacted with one equivalent of the isocyanate, R^2\_NCO, wherein R^2\_N is as defined above for R^2 in Formula Ia, in the presence of a suitable base such as triethylamine in a suitable solvent such as DCM to give compounds of Formula Ia wherein R^5 is hydrogen and R^H is hydrogen.
Procedure B: A primary amine $R^{10} \text{-NH}_2$, or a secondary amine $R^{10} \text{-NH-R}^H$, wherein and $R^H$ is as defined as above for Formula Ia, and $R^{10}$ is aryl, heteroaryl, aryl-heteroaryl, heteroaryl-aryl, aryl-heterocyclyl; $N(C_{1-3} \text{alkyl})$-heteroaryl, cycloalkyl or $C_{1-6} \text{alkyleneR}^C$, wherein $R^C$ is hydrogen, $C_{1-3} \text{alkyl}$, aryl or halogen is dissolved in a suitable solvent such as dry THF and cooled to a suitable temperature, e.g. $-10^\circ C$ to $10^\circ C$, then reacted with triphosgene, and the resulting mixture is added to compounds of Formula II in the presence of a suitable base such as caesium carbonate or triethylamine. This mixture may be stirred at a suitable temperature for a suitable length of time for complete reaction, for example at room temperature for 6 h, to give compounds of Formula Ia wherein $R^5$, $R^{10}$ and $R^H$ are as defined above for Formula Ia.

![Scheme 1](image)

Compounds of Formula Ia wherein $R^1$, $R^3$ and $R^4$ are as defined above for Formula IA, $R^2$ is aryl, $C_{1-8} \text{alkyleneR}^A$, $N(R^H)\text{aryl}$, $R^H$ is $C_{1-6} \text{alkyleneN}^E\text{R}^F$ and $R^E$ and $R^F$ are both hydrogen, $R^5$ is hydrogen, or alkylene-heterocyclyl may be prepared from other compounds of Formula Ia, wherein $R^1$, $R^3$ and $R^4$ are as defined above for Formula IA, $R^2$ is $N(R^H)\text{aryl}$, $R^H$ is $C_{1-6} \text{alkyleneNHC(O)OC}_{1-4} \text{alkyl}$, $R^5$ is hydrogen, or a carbamate derivative of a compound of Formula Ia in which $R^2$ is $C_{1-3} \text{alkylene(NH}_2)-\text{aryl}$, according to Scheme 2 by deprotection in the presence of a suitable acid such as trifluoroacetic acid or p-toluenesulfonic acid.

![Scheme 2](image)

The acylhydrazide compounds of Formula Ib, which are compounds of Formula IA wherein $R^1$, $R^3$, $R^4$ are as hereinbefore defined for Formula IA (for example, $R^1$ represents...
-C<sub>alkylene-cycloalkyl</sub>, e.g. cycloalkylmethyl, R<sub>3</sub> represents hydrogen and R<sub>4</sub> represents halogen), A is C(O), R<sub>5</sub> is hydrogen, C<sub>1</sub>-<sub>8</sub> alkyl, -d-<sub>alkylene-heterocyclyl</sub>, -Ci.<sub>alkyleneN(C<sub>1</sub>-<sub>3</sub> alkyl)<sub>2</sub>, -C<sub>1</sub>-<sub>8</sub> alkyleneNR<sub>G</sub>C(O)OC<sub>1</sub>-<sub>6</sub> alkyl, -d-<sub>alkyleneNR<sub>G</sub>C(O)d</sub>-<sub>alkyl</sub>; (for example, R<sub>5</sub> is hydrogen); and R<sub>2</sub> is aryl, heteroaryl, cycloalkyl, heterocyclyl, -aryl-heterocyclyl, biaryl, aryl-heteroaryl, -heteroaryl-aryl, -aryl-d-salkylene-heterocyclyl, -heteroaryl-aryl-C<sub>alkylene-heterocyclyl</sub>, -aryl-d-aalkylene-heterocyclyl-R<sub>4</sub>, -aryl-O-d.<sub>alkylene-heterocyclyl</sub> or Cl<sub>1</sub>-<sub>alkyleneNR<sub>G</sub></sub>, wherein R<sub>G</sub> is hydrogen, d<sub>-3</sub>alkyl, halogen, -N(C<sub>1</sub>-<sub>3</sub> alkyl)<sub>2</sub>, aryl, biaryl, cycloalkyl, -aryl-d-salkylene-heterocyclyl or -aryl-O-C<sub>1</sub>-<sub>3</sub>alkyleneheterocyclyl; (for example, R<sub>2</sub> is -phenyl-d<sub>-3</sub>alkylene-X, -pyridyl-phenyl-C<sub>1</sub>-<sub>3</sub>alkylene-X or -phenyl-C<sub>1</sub>-<sub>3</sub>alkylene-X-R<sub>4</sub>, wherein phenyl is optionally substituted with one group selected from halogen or CF<sub>3</sub>; may be prepared from the corresponding hydrazine compounds of Formula II, wherein R<sub>1</sub>, R<sub>3</sub> and R<sub>4</sub> are as hereinbefore defined for Formula IA, (for example, R<sub>1</sub> represents -C<sub>alkylene-cycloalkyl</sub>, e.g. cycloalkylmethyl, R<sub>3</sub> represents hydrogen and R<sub>4</sub> represents halogen), and R<sub>5</sub> is hydrogen, C<sub>1</sub>-<sub>8</sub> alkyl, -C<sub>1</sub>-<sub>3</sub> alkylene-heterocyclyl, -C<sub>1</sub>-<sub>8</sub>alkyleneN(C<sub>1</sub>-<sub>3</sub> alkyl)<sub>2</sub>, -C<sub>1</sub>-<sub>8</sub> alkyleneNR<sub>G</sub>C(O)OC<sub>1</sub>-<sub>6</sub> alkyl or -C<sub>1</sub>-<sub>8</sub>alkyleneNR<sub>G</sub>C(O)C<sub>1</sub>-<sub>6</sub>alkyl; (for example, R<sub>5</sub> is hydrogen); according to Scheme 3. Compounds of Formula II are reacted with an acid chloride R<sub>2</sub>COHal, wherein R<sub>2</sub> is as defined above for Formula Ib, and Hal is Cl or Br, in a suitable solvent such as pyridine to give compounds of Formula Ib.

![Scheme 3](image)

The acylhydrazide compounds of Formula Ibi, which are compounds of Formula Ib (and therefore of Formula IA) wherein R<sub>1</sub>, R<sub>3</sub>, R<sub>4</sub> are as hereinbefore defined for Formula IA, (for example, R<sub>1</sub> represents -d<sub>-3</sub>alkylene-cycloalkyl, e.g. cycloalkylmethyl, R<sub>3</sub> represents hydrogen and R<sub>4</sub> represents halogen), A is C(O), R<sub>5</sub> is hydrogen, C<sub>1</sub>-<sub>8</sub> alkyl, -Ci.<sub>alkyleneN(C<sub>1</sub>-<sub>3</sub> alkyl)<sub>2</sub>, -C<sub>1</sub>-<sub>8</sub> alkyleneNR<sub>G</sub>C(O)OC<sub>1</sub>-<sub>6</sub> alkyl, or -C<sub>1</sub>-<sub>8</sub>alkyleneNR<sub>G</sub>C(O)Ci<sub>6</sub>alkyl, (for example, R<sub>5</sub> is hydrogen); and R<sub>2</sub> is -aryl-d-salkylene-heterocyclyl, -aryl-C<sub>1</sub>-<sub>3</sub>alkylene-heterocyclyl-R<sub>4</sub>, -heteroaryl-aryl-d-salkylene-heterocyclyl, (for example, R<sub>2</sub> is -phenyl-d<sub>-3</sub>alkylene-X, -pyridyl-phenyl-C<sub>1</sub>-<sub>3</sub>alkylene-X or -phenyl-C<sub>1</sub>-<sub>3</sub>alkylene-X-R<sub>4</sub>, wherein phenyl is optionally substituted with one group selected from halogen or CF<sub>3</sub>; may be prepared from the corresponding acylhydrazide compounds of Formula XII, wherein R<sub>1</sub>, R<sub>3</sub> and R<sub>4</sub> are as hereinbefore defined for Formula IA, (for example, R<sub>1</sub> represents -C<sub>1</sub>-<sub>8</sub>alkylene-cycloalkyl, e.g. cycloalkylmethyl, R<sub>3</sub> represents hydrogen and R<sub>4</sub> represents halogen), R<sub>5</sub> is hydrogen, Ci<sub>1</sub>-<sub>8</sub> alkyl, -C<sub>1</sub>-<sub>8</sub>alkyleneN(Ci<sub>3</sub> alkyl)<sub>2</sub>, -C<sub>1</sub>-<sub>8</sub>alkyleneNR<sub>G</sub>C(O)OC<sub>1</sub>-<sub>6</sub>alkyl or
-C_{1,8}alkyleneNR^G\text{C}(\text{O})\text{C}_{1,8}alkyl; (for example, R^5 is hydrogen); and R^x is -arylhaloC^alkylene or -heteroaryl-arylhaloC^alkylene, by reaction with compounds of Formula XIII, which compounds are heterocyclyl or heterocyclyl-R^J, for example compounds XIII are "X" or "X-R^J", wherein "X" and "R^J" are as defined hereinabove for Formula I, in the presence of a base, for example an inorganic base such as potassium carbonate, or an organic base such as an amine, e.g. DIPEA, and optionally in the presence of iodide, for example by addition of NaI, according to Scheme 4.

![Scheme 4]

Compounds of Formula XII may be prepared using an analogous procedure to that described for Scheme 3, by a reaction between compounds of Formula II and R^xCHal, wherein R^x is R^x is -arylhaloCvalkylene or -heteroaryl-arylhaloC_{1,8}alkylene, and Hal is Cl or Br, in the presence of a base, for example an inorganic base such as potassium carbonate, or an organic base such as an amine, e.g. DIPEA.

Compounds of Formula IA may be prepared from compounds of Formula III, wherein R^1, R^2, R^3, R^4 and R^5 are as defined above for Formula IA, according to Scheme 5 by cyanation, by displacement of the chloro substituent of compounds of Formula III using a variety of conditions, for example by treatment with potassium or sodium cyanide in the presence of a suitable base such as DABCO in a suitable solvent such as DMSO.

![Scheme 5]

The alkoxy carbonyl hydrazine compounds of Formula Ic, which are compounds of Formula IA wherein R^1, R^3 and R^4 are as defined above for Formula IA, A is C(O), and R^5 is hydrogen, C_{1,8}alkyl, C_{1,8}alkenyl, -Cl_{1,8}alkyleneNR^G(C_{1,8}alkyl)_2, -Cl_{1,8}alkyleneNR^G(\text{O})C_{1,8}alkyl or -C_{1,8}alkyleneNR^G\text{C}(\text{O})C_{1,8}alkyl and R^2 is OR^11 in which R^11 is C_{1,8}alkenyl, or -C_{1,8}alkyleneR^D, wherein R^D is hydrogen, C_{1,8}alkyl, aryl, heteroaryl,
heterocyclyl, cycloalkyl, heterocyclyl, CCl₃, cyano, -NHC(O)C₁₋₆ alkyl, -NHC(O)OC₁₋₆ alkyl, or -C(O)C₁₋₆ alkyl, may be prepared from the corresponding hydrazine compounds of Formula II, wherein R⁵ is hydrogen, C₁₋₆ alkyl, d₉ alkenyl, -C₉ alkenyleneN(C₁₋₆ alkyl)₂, -C₁₋₆ alkyleneNR₂C(O)OC₁₋₆ alkyl or -C₁₋₆ alkyleneNR₂C(O)C₁₋₆ alkyl and R¹, R³ and R⁴ are as defined above for Formula IA, according to Scheme 6. Compounds of Formula II are reacted with a chloroformate R¹OCOCl, wherein R¹ is as defined above for Formula Ic, in a suitable solvent such as DCM in the presence of a suitable base such as a mixture of diisopropylethylamine and DMAP to give compounds of Formula Ic. Chloroformates R¹OCOCl are either commercially available, or they may be obtained by reaction between the corresponding commercially available alcohol R¹OH, wherein R¹ is as defined above for Formula Ic, and triphosgene in a suitable solvent such as THF, which may be directly reacted with compounds of Formula II in the presence of a suitable base such as triethylamine in a suitable solvent, for example pyridine, to give compounds of Formula Ic.

![Scheme 6](image)

Compounds of Formula Ma which are compounds of Formula II wherein R⁵ is hydrogen, may be prepared from compounds of Formula IV, wherein R¹, R³ and R⁴ are as defined above for Formula II (for example, R¹ represents -C₉ alkylene-cycloalkyl, e.g. cycloalkylmethyl, R³ represents hydrogen and R⁴ represents halogen), according to Scheme 7 by deprotection in the presence of a suitable acid such as trifluoroacetic acid.

![Scheme 7](image)

Compounds of Formula IV may be prepared from compounds of Formula V, wherein R¹, R³ and R⁴ are as defined above for Formula IV (for example, R¹ represents -C₉ alkylene-cycloalkyl, e.g. cycloalkylmethyl, R³ represents hydrogen and R⁴ represents halogen), according to Scheme 8 by cyanation, by displacement of the chloro substituent of
compounds of Formula V using a variety of conditions, for example by treatment with potassium or sodium cyanide in the presence of a suitable base such as DABCO in a suitable solvent such as DMSO.

\[ \text{V} \xrightarrow{\text{cyanation}} \text{IV} \]

Scheme 8

Compounds of Formula V may be prepared from compounds of Formula VI, wherein \( R^1 \) is as defined above for Formula V (for example, \( R^1 \) represents \(-\text{alkylene-cycloalkyl}, \) e.g. cycloalkylmethyl), according to Scheme 9 by reaction of compounds of Formula VI with a compound of Formula VII, wherein \( R^3 \) and \( R^4 \) are as described for Formula V, (for example, \( R^3 \) represents hydrogen and \( R^4 \) represents halogen), (commercially available from FLUKA or SIGMA) in a suitable solvent such as EtOH, for example at room temperature for 3-4 days, for example according to the literature procedure given in Bagley J. R. et al., (1989) J. Med. Chem. 32, 663-671.

\[ \text{VI} \xrightarrow{} \text{V} \]

Scheme 9

Compounds of Formula VI may be prepared from the compound of Formula VIII by a reductive amination reaction with an aldehyde IX, wherein \( R^{13} \) is one carbon shorter in chain length than \( R^1 \), wherein \( R^1 \) is \( C^\text{alkyl}, -\text{Cl}, \text{alkyleneNR}_2^E \text{R}_F, -\text{alkyleneNR}_G^\text{C(O)OC}^F \text{alkyl}, -\text{alkyleneNR}_G^\text{C(O)C}^F \text{alkyl} \) or \(-\text{alkylene-cycloalkyl}, \) (for example, \( R^1 \) represents \(-\text{alkylene-cycloalkyl}, \) e.g. cycloalkylmethyl), according to Scheme 10. The compound of Formula VIII, tert-butyl carbazate, is commercially available (ALDRICH). Reductive amination of the compound of Formula VIII with aldehydes of Formula IX is carried out in the presence of a suitable reducing agent such as hydrogen, and a suitable catalyst such as platinum or palladium or platinum oxide, in a suitable solvent such as i-PrOH, EtOH or a mixture thereof, for example.

Scheme 10

Aldehydes of Formula IX are either commercially available, e.g. cyclopentane carbaldehyde, or they may be prepared according to Scheme 11 i) from the corresponding commercially available dimethyl or diethyl acetal compound of Formula X wherein R^{13} is as defined above for compounds of Formula IX, by acid hydrolysis using a suitable acid such as hydrochloric acid, or ii) by oxidation of the commercially available alcohol compound of Formula XI, wherein R^{13} is as defined above for compounds of Formula IX, following standard procedures as the Swern oxidation or Dess-Martin oxidation.

Scheme 11

Compounds of Formula Ib(iii), which are compounds of Formula IA which are compounds of Formula IA wherein R^2, R^3, R^4 and R^5 are as defined above for Formula IA, R^1 is C_{1-8}alkyleneNH_2, and A is CO, may be prepared from a compound of Formula Ib wherein R^2, R^3, R^4 and R^5 are as defined for Formula Ib(iii), and R^1 is C_{1-8}alkyleneOC(O)NC(O)C_{1-8}alkyl, by a deprotection reaction in the presence of a suitable acid such as trifluoroacetic acid, in a suitable solvent such as dichloromethane, or alternatively hydrobromic acid in a suitable solvent such as acetic acid according to Scheme 12.

Scheme 12
Compounds of Formula Ib(iv) which are compounds of Formula IA wherein R2, R3, R4 and R5 are as defined for Formula Ib(Ni). R1 is -C1-alkyleneNC(O)C1-alkyl, and A is C(O), may be prepared from compounds of Formula Ib(iii) as defined above, according to Scheme 13, by treatment of Ib(i) with an anhydride of Formula O[C(O)C1-alkyl]2 in a suitable solvent such as dichloromethane, at a suitable temperature, e.g. -10°C to 10°C.

Scheme 13

Compounds of Formula lc(i), which are compounds of Formula IA wherein R3 and R4 are as defined above for Formula IA, R1 is C1-alkyl, A is C(O), R5 is C1-alkyl, C1-alkenyl, -C1-alkyleneN(C1-alkyl)2, -C1-alkyl-heterocyclyl, -C(O)C1-alkyl, -C(O)R2a, -C1-alkyleneNR2G(O)OC1-alkyl or -C1-alkyleneNR2G(C(O))C1-alkyl wherein R2 is as defined for Formula IA, or N-phthalidimido-Cl-alkylene-, and R2 is OR11 in which R11 is C1-alkenyl or -C1-alkyleneR2D, wherein R2D is hydrogen, C1-alkyl, aryl, heteroaryl, heterocyclyl, cycloalkyl, heterocyclyl, CCl3, cyano, -NHC(O)C1-alkyl, -NHC(O)OC1-alkyl, or -C(O)C1-alkyl, may be prepared from compounds of Formula IMA wherein R3 and R4 are as defined above for Formula IA, R1 is C1-alkyl, and R5 is hydrogen and R2 is OR11 in which R11 is as defined for lc(i), according to Scheme 14 by treatment of IIA with an alkylating agent of Formula R5-Cl, R5-Br or R5-OSO2Y, wherein R5 is as defined for Formula Ic(i) and Y is methyl or p-tolyl, in the presence of a suitable catalyst such as tetrabutylammonium hydrogensulfate and optionally sodium iodide in the presence of a base such as a mixture of potassium carbonate and sodium hydroxide, in a suitable solvent such as toluene, optionally at elevated temperature, e.g. 90-170°C.

Scheme 14
Compounds of Formula Id, which are compounds of Formula IA wherein R₁, R₂, R₃, R⁴ and R⁵ are as defined above for Formula IA, A is -SO₂⁻, may be prepared from compounds of Formula II wherein R¹, R³, R⁴ and R⁵ are as defined above for Formula IA according to Scheme 15, by treatment of compounds II with a sulfonyl chloride R²SO₂Cl, wherein R² is as defined above for Formula I; in a suitable solvent such as pyridine. Sulfonyl chlorides R²SO₂Cl may be commercially available or they may be prepared from the corresponding sulfonic acids R²SO₂OH by treatment of the sulfonic acids with thionyl chloride in a suitable solvent such as toluene at elevated temperatures such as 90-170°C.

![Scheme 15](image)

It will be appreciated by those skilled in the art that R³ and R⁴ groups in compounds of Formula IA may be converted into other R³ and R⁴ groups in order to provide further compounds of Formula IA. For example, when R⁴ is bromo, it may be converted to R⁴ is -C≡C-aryl by reaction with H-C≡C-aryl in the presence of copper (I) iodide and bis(triphenylphosphine)palladium(II) chloride. For example, when R⁴ is bromo, it may be converted to R⁴ is NH₃,salkylene-aryl by reaction with a suitable amine H-NHCl₃ALKYNE-aryl in the presence of palladium acetate and a suitable base, for example a mixture of BINAP and potassium carbonate. For example, when R⁴ is bromo, it may be converted to R⁴ is CF₃ by reaction with 2,2-difluoro-2-(fluorosulfonyl)acetate, hexamethylphosphoramide and copper (I) iodide, optionally heating at a suitable temperature, for example 80°C. Similarly, conversions may be carried out on compounds of Formula III, for example when R³ is chloro, it may be converted to R³ is methoxy by reaction with sodium methoxide in a suitable solvent, for example methanol.

It will be readily apparent to those skilled in the art that other compounds of Formula IA may be prepared using methods analogous to those outlined above, or by reference to the experimental procedures detailed in the Examples provided herein.

Those skilled in the art will also appreciate that in the preparation of the compound of Formula IA or a solvate thereof, it may be necessary and/or desirable to protect one or more sensitive groups in the molecule or the appropriate intermediate to prevent undesirable side reactions. Suitable protecting groups for use according to the present invention are well known to those skilled in the art and may be used in a conventional manner. See, for example, "Protective groups in organic synthesis" by T.W. Greene and P.G.M. Wuts (John Wiley & sons 1991) or "Protecting Groups" by P.J. Kocienski (Georg
Examples of suitable amino protecting groups include acyl type protecting groups (e.g. formyl, trifluoroacetyl, acetyl), aromatic urethane type protecting groups (e.g. benzylxycarbonyl (Cbz) and substituted Cbz), aliphatic urethane protecting groups (e.g. 9-fluorenylmethoxycarbonyl (Fmoc), t-butyloxycarbonyl (Boc), isopropylxycarbonyl, cyclohexyloxycarbonyl) and alkyl or aralkyl type protecting groups (e.g. benzyl, trityl, chlorotriptyl). Examples of suitable oxygen protecting groups may include for example alky silyl groups, such as trimethylsilyl or tert-butylimethylsilyl; alkyl ethers such as tetrahydropyranoyl or tert-butyl; or esters such as acetate.

Examples

The following examples illustrate the invention. These examples are not intended to limit the scope of the invention, but rather to provide guidance to the skilled artisan to prepare and use the compounds, compositions, and methods of the invention. While particular embodiments of the invention are described, the skilled artisan will appreciate that various changes and modifications can be made without departing from the spirit and scope of the invention.

**Intermediates**

**Intermediate 1: 1,1-dimethylethyl (2E)-2-(cyclopentylmethylidene)-hydrazinecarboxylate.**

![Chemical structure](image)

To a solution of tert-butyl hydrazine carboxylate (FLUKA, 4.0 g, 30.2 mmol) in dry MeOH (60 mL) under nitrogen atmosphere, cyclopentane carbaldehyde (ALDRICH, 3.2 mL, 30.2 mmol) was added. The mixture was stirred at room temperature overnight. Solvent was evaporated and the residue was partitioned between DCM and H₂O. The organic phase was washed with brine, dried and the solvent evaporated to give the title compound. ¹H NMR (300 MHz, CDCl₃) δ ppm: 7.59 (s, 1H), 7.06 (m, 1H), 2.85-2.70 (m, 1H), 2.00-1.40 (m, 8H), 1.50 (s, 9H).

**Intermediate 2: 1,1-dimethylethyl 2-(cyclopentylmethyl) hydrazine carboxylate.**

**Method A:** PtO₂ (ALDRICH, 350 mg) and acetic acid (0.6 mL) were added to a solution of Intermediate 1 (6.5 g, 30.2 mmol) dissolved in dry EtOH (70 mL) under nitrogen atmosphere and the mixture was stirred at room temperature under hydrogen atmosphere for 3 days. The reaction mixture was filtered and the filtrate was concentrated under reduced pressure. The residue was dissolved in EtOAc and washed with saturated NaHCO₃ and brine. The organic phase was dried and the solvent evaporated to give the title compound.
**Method B**: To a solution of tert-butyl hydrazine carboxylate (FLUKA, 4.79 g, 36.3 mmol) in dry MeOH (80 mL), cyclopentane carbaldehyde (ALDRICH, 3.56 mg, 36.3 mmol), NaBH₃CN (ALDRICH, 4.55 g, 72.4 mmol) and glacial AcOH (8.2 mL) were added. The mixture was stirred at room temperature overnight, cooled over an ice bath and neutralised with 2N NaOH. Solvent was evaporated and the residue was partitioned between DCM and H₂O. The organic phase was washed with brine, dried and the solvent evaporated. The residue was purified on silica gel (hexane/ EtOAc, 9/1) to yield the title compound. ¹H NMR (300 MHz, CDCl₃) δ ppm: 5.96 (br s, 1H), 3.35 (br s, 1H), 2.77 (d, 2H, J=7.3 Hz), 2.10-1.88 (m, 1H), 1.83-1.69 (m, 2H), 1.69-1.46 (m, 4H), 1.45 (s, 9H), 1.28-1.12 (m, 2H).

Intermediate 3: **1,1-dimethylethyl** 2-(5-bromo-2-chloro-4-pyrimidinyl)-2-(cyclopentylmethyl)hydrazinecarboxylate.

![Intermediate 3](image)

To a solution of Intermediate 2 (3.0 g, 13.99 mmol) in dry EtOH (60 mL) under nitrogen atmosphere, 5-bromo-2,4-dichloropyrimidine (ALDRICH, 3.8 g, 16.8 mmol) and diisopropyl ethylamine (FLUKA, 4.88 mL, 28 mmol) were added and the mixture was stirred at room temperature overnight and, then, refluxed for further 3h. The reaction mixture was concentrated after cooling to room temperature and the residue was dissolved in DCM and washed with saturated NH₄Cl and brine. The organic phase was dried over MgSO₄, filtered and the solvent evaporated to obtain an oil. The oil was stirred with 10 mL of hexane to provide a precipitate which was filtered to yield the title compound. ¹H NMR (300 MHz, d₆-DMSO) δ ppm: 9.92 (s, 1H), 8.37 (s, 1H), 4.05-3.20 (m, 2H), 2.30-2.10 (m, 1H), 1.80-1.10 (m, 8H), 1.43 (s, 9H).

Intermediate 4: **1,1-dimethylethyl** 2-(5-bromo-2-cyano-4-pyrimidinyl)-2-(cyclopentylmethyl)hydrazinecarboxylate.

![Intermediate 4](image)

1,4-diazabicyclo [2.2.2] octane (ALDRICH, 1.13 g, 10.10 mmol) and potassium cyanide (ALDRICH, 790 mg, 12.12 mmol) were added to a solution of Intermediate 3 (4.1 g, 10.10 mmol) in 9/1 v/v DMSO/H₂O (50 mL). The mixture was stirred at room temperature for 6h 30 min. and, then, poured over a mixture of H₂O and ice. The precipitate was filtered off and washed with H₂O. The solid was dissolved in DCM and the organic layer was washed...
with brine, dried and concentrated. The residue was purified on silica gel (hexane to hexane/EtOAc 1:9) to give the title compound. $^1$H NMR (300 MHz, d6-DMSO) δ ppm: 10.00 (s, 1H), 8.61 (s, 1H), 4.05-3.21 (m, 2H), 2.30-2.13 (m, 1H), 1.78-1.37 (m, 6H), 1.42 (s, 9H), 1.29-1.13 (m, 2H). [ES+ MS] m/z 396 (M$^+$).

Intermediate 5: 5-bromo-4-[1-(cyclopentylmethyl)hydrazino]-2-pyrimidine carbonitrile.

To a solution of Intermediate 4 (3.7 g, 9.3 mmol) in dry CH$_2$CN (60 ml), p-toluenesulphonic acid monohydrate (ALDRICH, 4.8 g, 28 mmol) was added and the mixture was stirred at room temperature overnight. The reaction mixture was concentrated and the residue was dissolved in DCM and washed with saturated NaHCO$_3$. The organic phase was dried over MgSO$_4$, filtered and the solvent evaporated. The residue was purified on silica gel (hexane to hexane/EtOAc 2:8) to yield the title compound. $^1$H NMR (300 MHz, d6-DMSO) δ ppm: 8.43 (s, 1H), 4.98 (s, 2H), 3.67 (d, 2H, $J=7.6$ Hz), 2.48-2.36 (m, 1H), 1.73-1.41 (m, 6H), 1.27-1.13 (m, 2H). [ES+ MS] m/z 296 (M$^+$).

Intermediate 6: W-(5-bromo-2-cyano-4-pyrimidinyl)-4-(chloromethyl)-W-(cyclopentylmethyl)benzohydrazide.

To a solution of Intermediate 5 (600 mg, 2.02 mmol) in dry THF (20 mL) under nitrogen atmosphere, K$_2$CO$_3$ (FLUKA, 560 mg, 4.04 mmol) and 4-(chloromethyl) benzoyl chloride (ALDRICH, 460 mg, 2.43 mmol) were added and the mixture was stirred at room temperature overnight. The reaction mixture was filtered, concentrated and the obtained residue was washed with DCM and filtered to yield the title compound. $^1$H NMR (300 MHz, d6-DMSO) δ ppm: 11.36 (s, 1H), 8.63 (s, 1H), 7.92 (d, 2H, $J=8.2$ Hz), 7.59 (d, 2H, $J=8.2$ Hz), 4.83 (s, 2H), 4.16-3.37 (m, 2H), 2.36-2.22 (m, 1H), 1.81-1.68 (m, 2H), 1.67-1.42 (m, 4H), 1.38-1.18 (m, 2H). [ES+ MS] m/z 448 (M$^+$).

Intermediate 7: 1,1-dimethylethyl 2-(cyclopentylmethyl)-2-(2,5-dichloro-4-pyrimidinyl) hydrazinecarboxylate.
To a solution of Intermediate 2 (0.65 g, 3.03 mmol) in dry EtOH (13 mL) under nitrogen atmosphere, 2,4,5-trichloropyrimidine (ALDRICH, 0.67 g, 3.64 mmol) and diisopropyl ethylamine (ALDRICH, 1.1 mL, 6.06 mmol) were added and the mixture was stirred at room temperature overnight. The reaction mixture was concentrated and the residue was dissolved in DCM and washed with saturated NH₄Cl and brine. The organic phase was dried over Na₂SO₄, filtered and the solvent evaporated. The residue was purified on silica gel (hexane/EtOAc, 9:1) to yield the title compound.

1H NMR (300 MHz, CDCl₃) δ ppm: 8.09 (s, 1H), 7.14-6.92 (m, 1H), 4.19-3.15 (m, 2H), 2.36-2.18 (m, 1H), 1.82-1.16 (m, 8H), 1.46 (s, 9H).

Intermediate 8: 1,1-dimethylethyl 2-(5-chloro-2-cyano-4-pyrimidinyl)-2-(cyclopentylmethyl)hydrazinecarboxylate.

1,4-diazabicyclo [2.2.2] octane (ALDRICH, 166 mg, 1.48 mmol) and potassium cyanide (ALDRICH, 115 mg, 1.78 mmol) were added to a solution of Intermediate 7 (537 mg, 1.48 mmol) in 9/1 v/v DMSO/H₂O (7 mL). The mixture was stirred at room temperature for 6 h and then poured over a mixture of H₂O and ice. The precipitated solid was filtered off and washed with H₂O. The solid was dissolved in DCM and the organic layer was successively washed with brine, dried and concentrated. The obtained residue was purified on silica gel (hexane: EtOAc, 9:1) to give the desired compound. 1H NMR (300 MHz, CDCl₃) δ ppm: 8.29 (s, 1H), 6.80 (s, 1H), 4.18-3.24 (m, 2H), 2.38-2.21 (m, 1H), 1.86-1.20 (m, 8H), 1.47 (s, 9H). [ES+ MS] m/z 352 (MH)+.

To a solution of Intermediate 8 (420 mg, 1.19 mmol) in dry CH₃CN (10 mL), p-toluenesulphonic acid monohydrate (ALDRICH, 616 mg, 3.58 mmol) was added and the mixture was stirred at room temperature for 16 h. The reaction mixture was concentrated
and the residue was dissolved in DCM and washed with saturated NaHCO₃ and brine. The organic phase was dried over MgSO₄, filtered and the solvent evaporated. The obtained residue was purified on silica gel (hexane/ EtOAc, 10:1) to yield the title compound. H NMR (300 MHz, CDCl₃) δ ppm: 8.19 (s, 1H), 4.90-3.92 (m, 2H), 3.86 (d, 2H, J= 7.5 Hz), 2.48-2.30 (m, 1H), 1.82-1.48 (m, 6H), 1.35-1.15 (m, 2H).

To a solution of Intermediate 9 (205 mg, 0.81 mmol) in dry THF (6 mL) under nitrogen atmosphere, K₂CO₃ (FLUKA, 224 mg, 1.62 mmol) and 4-(chloromethyl)-benzoyl chloride (ALDRICH, 185 mg, 0.98 mmol) were added and the mixture was stirred at room temperature for 2h. The reaction mixture was filtered, concentrated and the residue was washed with a mixture of DCM/hexane and filtered to yield the title compound. H NMR (300 MHz, CDCl₃) δ ppm: 8.24 (s, 1H), 8.11 (s, 1H), 7.75 (d, 2H, J=8.2 Hz), 7.47 (d, 2H, J=8.2 Hz), 4.57 (s, 2H), 3.91-3.77 (m, 2H), 2.31-2.15 (m, 1H), 1.82-1.45 (m, 6H), 1.33-1.15 (m, 2H).

Intermediate 11: W-(5-bromo-2-cyano-4-pyrimidinyl)-3-(bromomethyl)-W-(cyclopentylmethyl)-4-fluorobenzohydrazide.

The title compound was prepared by a method analogous to that described for Intermediate 6 using 5-bromo-4-[1-(cyclopentylmethyl)hydrazino]-2-pyrimidine carbonitrite (296 mg, 1.0 mmol) as starting material and 3-(bromomethyl)-4-fluorobenzoyl chloride (324 mg, 1.3 mmol, 1.3 eq). H NMR (300 MHz, CDCl₃) δ ppm: 8.47 (s, 1H), 8.15 (s, 1H), 7.91 (dd, 1H, J=7.0, 2.4 Hz), 7.82-7.76 (m, 1H), 7.21 (t, 1H, J=8.8 Hz), 5.76 (s, 2H), 3.98-3.82 (m, 2H), 2.31 (hept, 1H, J=7.6 Hz), 1.90-1.22 (m, 8H).

Intermediate 12: W-(5-bromo-2-cyano-4-pyrimidinyl)-3-(chloromethyl)-W-(cyclopentylmethyl)benzohydrazide.
The title compound was prepared by a method analogous to that described for Intermediate 6 using 5-bromo-4-[1-(cyclopentylmethyl)hydrazino]-2-pyrimidinecarbonitrile (269 mg, 0.91 mmol) as starting material and 3-(chloromethyl)benzoyl chloride (ALDRICH, 0.15 ml, 1.09 mmol, 1.2 eq). \(^1\)H NMR (300 MHz, CDCl\(_3\)) \(\delta\) ppm: 8.46 (s, 1H), 8.23 (s, 1H), 7.86 (s, 1H), 7.78 (d, 1H, J=7.8 Hz), 7.64 (d, 1H, J=7.8 Hz), 7.52 (t, 1H, J=7.8 Hz), 4.61 (s, 2H), 3.99-3.82 (m, 2H), 2.33 (hept, 1H, J=7.5 Hz), 1.89-1.52 (m, 6H), 1.40-1.24 (m, 2H).

Intermediate 13: 5-[4-(hydroxymethyl)phenyl]-3-pyridinecarboxylic acid.

5-Bromonicotinic acid (FLUKA, 2.0 g, 9.9 mmol) was dissolved in 1,2-dimethoxyethane (100 mL) under nitrogen. Palladium tetrakistriphenylphosphine (ALDRICH, 572 mg, 0.49 mmol) was added and the resulting reaction mixture was stirred at rt for 15 min. Sodium carbonate (8.4 g, 79.2 mmol), water (60 mL) and 4-(hydroxymethyl)benzene boronic acid (LANCASTER, 2.1 g, 13.86 mmol) were successively added. The resulting reaction mixture was refluxed at 95 °C for 21 h and then cooled to rt. After filtration over celite, the reaction mixture was acidified (2N HCl, adjusted to pH 3). The white precipitate was filtered off to obtain the title compound. \(^1\)H NMR (300 MHz, DMSO-d6) \(\delta\) ppm: 13.53 (br., 1H), 9.08 (m, 1H), 9.03 (m, 1H), 8.43 (m, 1H), 7.75 (d, 2H), 7.46 (d, 2H), 5.27 (m, 1H), 4.56 (m, 2H).

Intermediate 14: 5-[4-(chloromethyl)phenyl]-3-pyridinecarbonyl chloride.

Intermediate 13 and thionyl chloride (Aldrich, 20 mL) were refluxed together for 210 min. The solvent was evaporated under reduced pressure to obtain the title compound that was used in next step without further purification.

Intermediate 15: 1,1-dimethylethyl 2-(2-methylpropyl)hydrazinecarboxylate.
A solution of 1,1-dimethylethyl hydrazinecarboxylate (ALDRICH, 9.2 g, 70 mmol) in i-PrOH (50 ml) was treated at 0°C with 2-butyraldehyde (ALDRICH; 6.4 ml, 70 mmol) over 15 min and stirring at 0°C for 2 h, then the mixture was stirred 5 h at room temperature. To this solution containing the intermediate hydrazone was added PtO₂ and the suspension was hydrogenated at room temperature and 2.6 bar for 48 h. The suspension was filtered and the solvent was removed under reduced pressure to give the title compound. ¹H NMR (300 MHz, CDCl₃) δ ppm: 6.02 (br.s, 1H), 3.92 (br.s, 1H), 2.66 (d, 2H), 1.73 (m, 1H), 1.46 (s, 9H), 0.93 (d, 6H). [ES+ MS] m/z 189 (MH)⁺.

Intermediate 16: 1,1-dimethylethyl 2-(2,2-dimethylpropyl)hydrazinecarboxylate.

The title compound was prepared by a method analogous to that described for Intermediate 15 replacing 2-butyraldehyde with trimethylacetaldehyde (ALDRICH). ¹H NMR (300 MHz, CDCl₃) δ ppm: 8.19 (s, 1H), 3.34 (br.s, 1H), 2.46 (d, 2H), 1.37 (s, 9H), 0.85 (s, 9H) [ES+ MS] m/z 203 (MH)⁺.

Intermediate 17: 1,1-dimethylethyl 2-(5-bromo-2-chloro-4-pyrimidinyl)-2-(2,2-dimethylpropyl)hydrazinecarboxylate.

To a solution of 5-bromo-2,4-dichloropyrimidine (15.4 g, 68 mmol) and Intermediate 16 (12.5 g, 62 mmol) in /PrOH (150 mL), N,N-diisopropylethylamine (14 mL, 80 mmol) was added and the resulting reaction mixture was refluxed for 2.5 h, then stirred at room temperature overnight and again refluxed for further 3h. The mixture was concentrated under reduced pressure and the residue partitioned between DCM and 1M ammonium chloride. The organic layer was treated with brine and dried over anhydrous MgSO₄. The residue was purified by flash chromatography (elute: Hex/EtOAc mixtures 95:1 to 1:1) to give the title compound. ¹H NMR (300 MHz, CDCl₃) δ ppm: 8.27 (br.s, 1H), 6.85 (br.s, 1H),
4.85-4.63 (br.m, 1H), 2.90-2.65 (br.m, 1H), 1.47 (s, 9H), 0.98 (s, 9H). [ES+ MS] m/z 393 (M)^+.

Intermediate 18: **1,1-dimethylethyl 2-(5-bromo-2-cyano-4-pyrimidinyl)-2-(2,2-dimethylpropyl)hydrazinecarboxylate.**

![Structure of Intermediate 18](image)

Potassium cyanide (1.6 g, 25 mmol) was added to a suspension of Intermediate 17 (9 g, 23 mmol) and DABCO (2.6 g, 23 mmol) in a mixture of DMSO/H₂O 9:1 (100 ml.) at room temperature. The reaction mixture was heated at 80 °C for 1.5 h, and then poured into iced water. After being stirred for 1.5h, the yellow product that precipitated was filtered off and washed abundantly with water. The compound was redissolved in DCM and the resulting solution was washed with water (twice) and brine and the organic layer was dried over MgSO₄. The compound was purified by flash chromatography (eluent: Hex/EtOAC 7:3) to give the title compound. ¹H NMR (300 MHz, CDCl₃) δ ppm: 8.47 (br.s, 1H), 6.86 (br.s, 1H), 4.85-4.65 (br.m, 1H), 2.90-2.70 (br.m, 1H), 1.47 (s, 9H), 0.99 (s, 9H). [ES+ MS] m/z 384 (M)^+.

Intermediate 19: **5-bromo-4-[1-(2,2-dimethylpropyl)hydrazino]-2-pyrimidine carbonitrile.**

![Structure of Intermediate 19](image)

To a solution of Intermediate 18 (2 g, 5.2 mmol) in dry acetonitrile (100 ml.), p-toluenesulfonic acid (13 mmol) was added and the resulting reaction mixture was stirred at room temperature overnight. The mixture was then concentrated in vacuo and the residue partitioned between DCM and a saturated solution of sodium bicarbonate. The organic layer was washed with brine and dried over anhydrous NaHCO₃. The residue was purified by preparative HPLC (X-TERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 10-100%) to give the title compound. ¹H NMR (300 MHz, CDCl₃) δ ppm: 8.39 (s, 1H), 3.85 (s, 2H), 1.00 (s, 9H) [ES+ MS] m/z 284 (M^+).

Intermediate 20: **methyl 4-[(4-methyl-1-piperazinyl)methyl]benzoate.**
A solution of N-methylpiperazine (ALDRICH, 1.46 ml, 13.1 mmol) in dimethylformamide (5 ml) was cooled to 0°C and, then, potassium carbonate (1.61 g, 13.1 mmol) was added. This mixture was stirred at 0°C for 30 min. Then, methyl 4-[(bromomethyl)benzoate (ALDRICH, 3 g, 13.1 mmol) was added. The reaction mixture was allowed to warm up to room temperature and stirred for 17 h. The mixture was concentrated under reduce pressure. The residue was dissolved in DCM and washed with water, the aqueous layer was extracted with DCM. The organic layers were combined, washed with water, dried over MgSO₄, filtered and the solvent removed under reduce pressure to give the title compound. 

\[
{^1}H \text{R MN (300 MHz, CDCl}_3\text{-d}_6): \text{7.97 (d, 2H), 7.40 (d, 2H), 3.90 (s, 3H), 3.55 (s, 2H), 2.47 (br. m, 8H), 2.28 (s, 3H).}
\]

Intermediate 21: 4-[(4-methyl-1-piperazinyl)methyl]benzoic acid.

A solution of lithium hydroxide (ALDRICH, 337 mg, 14.1 mmol) in H₂O (10 ml) was added to a solution of Intermediate 20 (1.4 g, 5.63 mmol) in MeOH (20 ml) and the mixture was heated at reflux for 2 h. The mixture was concentrated under reduced pressure. The residue was dissolved in DCM and 2N hydrochloric acid was added to give pH 5. The aqueous layer was partitioned with n-Butanol (5 times) and the fractions were combined, dried over MgSO₄, filtered and evaporated under reduce pressure to give the title compound as a white solid. 

\[
{^1}H \text{R MN (300 MHz, DMSO-d}_6\): \text{12.83 (br. m, 1H), 11.05 (br. m, 1H), 7.90 (d, 2H), 7.43 (d, 2H), 4.36 (m, 1H), 3.60 (s, 2H), 3.38-2.80 (br. m, 8H), 2.68 (s, 3H). [ES+ MS] m/z 235 (MH)⁺.}
\]

Examples

Example 1: \(\Lambda''\)-3-[5-bromo-2-cyano-4-pyrimidinyl]-\(\Lambda''\)-cyclopentylmethyl)-4-[(4-methyl-1-piperazinyl)methyl]benzohydrazide trifluoroacetate.

\[
\text{Diisopropyl ethylamine (ALDRICH, 0.29 mL, 1.66 mmol) and N-methylpiperazine (ALDRICH, 0.16 mL, 1.45 mmol) were added to a solution of Intermediate 6 (500 mg, 1.11}
\]
mmol) in dry CH$_3$CN (25 mL). The reaction mixture was stirred at room temperature for 8h. The solvent was evaporated under reduced pressure and the crude was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H$_2$O, 0.1%TFA, gradient 20-100%) to give the title compound. $^1$H NMR (300 MHz, d$_6$-DMSO) $\delta$ ppm: 11.33 (s, 1H), 9.51 (br s, 1H), 8.63 (s, 1H), 7.92 (d, 2H, J=8.2 Hz), 7.48 (d, 2H, J=8.2 Hz), 4.17-2.19 (m, 13H), 2.78 (s, 3H), 1.83-1.41 (m, 6H), 1.35-1.17 (m, 2H). [ES+ MS] m/z 512 (M)$^+$. 

Example 2: /\-(S-bromo-2-cyano^-pyrimidinyO-A/\^-cyclopentylmethyO^-^-hydroxy-
1-piperidinyl)methyl]benzohydrazide trifluoroacetate.

Diisopropyl ethylamine (ALDRICH, 60 uL, 0.34 mmol) and 4-hydroxy-piperidine (ALDRICH, 28 mg, 0.28 mmol) were added to a solution of Intermediate 6 (103 mg, 0.23 mmol) in dry CH$_3$CN (3 mL). The reaction mixture was stirred at room temperature for 16h. The solvent was evaporated under reduced pressure and the crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H$_2$O, 0.1%TFA, gradient 30-100%) to give the title compound. $^1$H NMR (300 MHz, d$_6$-DMSO) $\delta$ ppm: 11.43 (s, 1H), 9.58 (br s, 1H), 8.64 (s, 1H), 8.00 (d, 2H, J=8.3 Hz), 7.70-7.60 (m, 2H), 4.47-2.81 (m, 10H), 2.34-2.21 (m, 1H), 2.05-1.19 (m, 12H). [ES+ MS] m/z 513 (M)$^+$. 

Example 3: W-(5-bromo-2-cyano-4-pyrimidinyl)-W-(cyclopentylmethyl)-4-[[4-(2-
hydroxyethyl)-1-piperazinyl methyl] benzohydrazide trifluoroacetate.

Diisopropyl ethylamine (ALDRICH, 57 uL, 0.33 mmol) and 1-(2-hydroxyethyl)piperazine (ALDRICH, 40 mg, 0.26 mmol) were added to a solution of Intermediate 6 (100 mg, 0.22 mmol) in dry CH$_3$CN (4 mL). The reaction mixture was stirred at room temperature for 18h. The solvent was evaporated under reduced pressure and the crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H$_2$O, 0.1%TFA, gradient 30-100%) and the remaining impurities were removed via a second preparative HPLC (XTERRA 19x150 mm, ACN:H$_2$O, 0.1%TFA, gradient 20-100%) to give the title compound. $^1$H NMR (300 MHz, d$_6$-DMSO) $\delta$ ppm: 11.34 (s, 1H), 8.63 (s, 1H), 7.92 (d, 2H, J=8.2 Hz), 7.49 (d, 2H, J=8.2 Hz), 4.31-2.38 (m, 17H), 2.37-2.18 (m, 1H), 1.83-1.41 (m, 6H), 1.35-1.17 (m, 2H). [ES+ MS] m/z 542 (M)$^+$. 

49
Example 4: W-(5-bromo-2-cyano-4-pyrimidinyl)-V-(cyclopentylmethyl)-4-\{4-(1-methyl-4-piperidinyl)-1-piperazinyl\}methyl]benzohydrazide trifluoroacetate.

Diisopropyl ethylamine (ALDRICH, 57 µL, 0.33 mmol) and 1-(N-methyl-4-piperidyl)-piperazine (ALDRICH, 52 mg, 0.26 mmol) were added to a solution of intermediate 6 (100 mg, 0.22 mmol) in dry CH₃CN (4 mL). The reaction mixture was stirred at room temperature for 18h. The solvent was evaporated under reduced pressure and the resulting crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 30-100%) and the remaining impurities were removed via a second preparative HPLC (XTERRA 19x150 mm, ACNiH₂O, 0.1%TFA, gradient 20-100%) to give the title compound. ¹H NMR (300 MHz, d₆-DMSO) δ ppm: 11.39 (s, 1H), 9.68 (br s, 1H), 8.63 (s, 1H), 7.96 (d, 2H, J=8.2 Hz), 7.55 (d, 2H, J=8.2 Hz), 4.37-2.79 (m, 17H), 2.75 (s, 3H), 2.59-2.01 (m, 5H), 1.81-1.22 (m, 8H). [ES+ MS] m/z 595 (M)+.

Diisopropyl ethylamine (ALDRICH, 133 µL, 0.77 mmol) and 1-N-propylpiperazine dihydrobromide (ALDRICH, 78 mg, 0.26 mmol) were added to a solution of Intermediate 6 (100 mg, 0.22 mmol) in dry CH₃CN (4 mL). The reaction mixture was stirred at room temperature for 18h. The solvent was evaporated under reduced pressure and the crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 30-100%) and the remaining impurities were removed via a second preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 20-100%) to give the title compound. ¹H NMR (300 MHz, d₆-DMSO) δ ppm: 11.33 (s, 1H), 9.35 (br s, 1H), 8.63 (s, 1H), 7.92 (d, 2H, J=8.2 Hz), 7.48 (d, 2H, J=8.2 Hz), 4.30-2.76 (m, 14H), 2.37-2.17 (m, 1H), 1.83-1.17 (m, 10H), 0.89 (t, 3H, J=7.4 Hz). [ES+ MS] m/z 540 (M)+.

Diisopropyl ethylamine (ALDRICH, 57 uL, 0.33 mmol) and 1-(N-methyl-3-piperidylmethyl)-piperazine (FLUOROCHEM, 55 mg, 0.26 mmol) were added to a solution of Intermediate 6 (100 mg, 0.22 mmol) in dry CH₃CN (4 mL). The reaction mixture was stirred at room temperature for 18 h. The solvent was evaporated under reduced pressure and the crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 30-100%) and the remaining impurities were removed via a second preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 20-100%) to give the title compound. ¹H NMR (300 MHz, d6-DMSO) δ ppm: 11.40 (s, 1H), 9.46 (br s, 1H), 8.64 (s, 1H), 7.97 (d, 2H, J=8.2 Hz), 7.58 (d, 2H, J=8.2 Hz), 4.39-2.65 (m, 21H), 2.64-1.15 (m, 14H). [ES+ MS] m/z 609 (M)+.

Diisopropyl ethylamine (ALDRICH, 57 uL, 0.33 mmol) and 4-piperidine ethanol (ALDRICH, 36 mg, 0.26 mmol) were added to a solution of Intermediate 6 (102 mg, 0.22 mmol) in dry CH₃CN (4 mL). The reaction mixture was stirred at room temperature for 16 h. The solvent was evaporated under reduced pressure and the crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 30-100%) to give the title compound. ¹H NMR (300 MHz, d6-DMSO) δ ppm: 11.40 (s, 1H), 9.46 (br s, 1H), 8.64 (s, 1H), 8.00 (d, 2H, J=8.2 Hz), 7.64 (d, 2H, J=8.2 Hz), 4.62-2.63 (m, 11H), 2.36-2.18 (m, 1H), 1.93-1.17 (m, 15H). [ES+ MS] m/z 541 (M)+.

Diisopropyl ethylamine (ALDRICH, 57 uL, 0.33 mmol) and 4-(hydroxymethyl)piperidine (ALDRICH, 32 mg, 0.26 mmol) were added to a solution of Intermediate 6 (102 mg, 0.22
mmol) in dry CH₂CN (4 mL). The reaction mixture was stirred at room temperature for 16 h. The solvent was evaporated under reduced pressure and the crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 30-100%) to give the title compound. ¹H NMR (300 MHz, d₆-DMSO) δ ppm: 11.44 (s, 1H), 9.49 (br s, 1H), 8.64 (s, 1H), 8.00 (d, 2H, J=8.2 Hz), 7.63 (d, 2H, J=8.2 Hz), 4.52-2.82 (m, 11H), 2.36-2.20 (m, 1H), 1.89-1.18 (m, 13H). [ES+ MS] m/z 527 (M)⁺.

Example 9: N'-(5-bromo-2-cyano-4-pyrimidinyl)-W-(cyclopentylmethyl)-4-{4-(4-methyl-1-piperazinyl)-1-piperidinyl}methyl]benzohydrazide trifluoroacetate.

Diisopropyl ethylamine (ALDRICH, 57 uL, 0.33 mmol) and 1-methyl-4-(piperidin-4-yl)-piperazine (FLUOROCHEM, 49 mg, 0.26 mmol) were added to a solution of Intermediate 6 (102 mg, 0.22 mmol) in dry CH₂CN (4 mL). The reaction mixture was stirred at room temperature for 16 h. The solvent was evaporated under reduced pressure and the crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 30-100%) to give the title compound. ¹H NMR (300 MHz, d₆-DMSO) δ ppm: 11.45 (s, 1H), 9.95 (br s, 1H), 8.64 (s, 1H), 8.00 (d, 2H, J=8.2 Hz), 7.64 (d, 2H, J=8.2 Hz), 4.54-2.20 (m, 18H), 2.76 (s, 3H), 2.07-1.17 (m, 12H). [ES+ MS] m/z 595 (M)⁺.

Example 10: AT-(5-chloro-2-cyano-4-pyrimidinyl)-W-(cyclopentylmethyl)-4-{4-(methyl-1-piperazinyl)methyl]benzohydrazide trifluoroacetate.

To a solution of Intermediate 10 (115 mg, 0.28 mmol) in dry CH₂CN (4 mL), diisopropyl ethylamine (ALDRICH, 73 uL, 0.42 mmol) and N-methyl-piperazine (ALDRICH, 40 uL, 0.36 mmol) were added and the mixture was stirred at room temperature overnight. The solvent was evaporated under reduced pressure and the crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 25-100%) to give the title compound. ¹H NMR (300 MHz, d₆-DMSO) δ ppm: 11.36 (s, 1H), 8.51 (s, 1H), 7.89 (d, 2H, J=8.2 Hz), 7.49 (d, 2H, J=8.2 Hz), 4.44-2.83 (m, 12H), 2.76 (s, 3H), 2.35-2.21 (m, 1H), 1.85-1.41 (m, 6H), 1.36-1.20 (m, 2H). [ES+ MS] m/z 468 (MH)⁺.

Example 11: V-(5-chloro-2-cyano-4-pyrimidinyl)-V-(cyclopentylmethyl)-4-{4-(4-methyl-1-piperazinyl)-1-piperidinyl}methyl]benzohydrazide trifluoroacetate.
To a solution of Intermediate 10 (120 mg, 0.29 mmol) in dry CH$_3$CN (4 mL), diisopropyl ethylamine (ALDRICH, 76 µL, 0.44 mmol) and 1-methyl-4-(piperidin-4-yl)piperazine (FLUOROCHEM, 70.7 mg, 0.38 mmol) were added and the mixture was stirred at room temperature for 7h 30min. The solvent was evaporated under reduced pressure and the crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H$_2$O, 0.1%TFA, gradient 20-100%) to give the title compound. $^1$H NMR (300 MHz, d$_6$-DMSO) δ ppm: 11.47 (s, 1H), 9.87 (br s, 1H), 8.53 (s, 1H), 7.98 (d, 2H, J=8.2 Hz), 7.65 (d, 2H, J=8.2 Hz), 4.83-2.19 (m, 18H), 2.76 (s, 3H), 2.07-1.15 (m, 12H). [ES+ MS] m/z 551 (MH)$^+$.  

Example 12: $\Lambda$-(5-bromo-2-cyano^-pyrimidinyl)-$\Lambda$-(cyclopentylmethyl)^-fluoro-3-{{[4-(4-morpholinyl)-1-piperidinyl]methyl}benzohydrazide trifluoroacetate.}  

To a solution of Intermediate 11 (110 mg, 0.22 mmol) in dry CH$_3$CN (4 mL) were added diisopropyl ethylamine (FLUKA, 56 µL, 0.32 mmol, 1.5 eq) and 4-(4-piperidinyl)morpholine (ALDRICH, 44 mg, 0.26 mmol, 1.2 eq) and left under stirring at room temperature for 1h 30min. The solvent was evaporated under reduced pressure and the resulting crude product was purified by preparative HPLC (SUNFIRE 19x150 mm, ACN:H$_2$O, 0.1%TFA, gradient 20-50%) to give the title compound. $^1$H NMR (300 MHz, d$_6$-DMSO) δ ppm: 11.49 (s, 1H), 10.28 (br s, 1H), 8.64 (s, 1H), 8.18-8.07 (m, 2H), 7.52 (t, 1H, J=9.3 Hz), 4.59-2.63 (m, 17H), 2.36-1.95 (m, 13H), [ES+ MS] m/z 600 (M)$^+$.  

To a solution of intermediate 6 (180 mg, 0.40 mmol) in dry CH$_3$CN (6 mL) were added diisopropyl ethylamine (FLUKA, 105 µL, 0.60 mmol, 1.5 eq) and $\Lambda$-$\Lambda$-diethyl-4-piperidinamine (ALDRICH, 75.0 mg, 0.48 mmol, 1.2 eq) and left under stirring at room
temperature for 16h. The solvent was evaporated under reduced pressure and the resulting crude product was purified by preparative HPLC (SUNFIRE 19x150 mm, ACN:H₂O, 0.1% TFA, gradient 20-80%) and the remaining impurities were removed via a second preparative HPLC using the same conditions to give the title compound. ¹H NMR (300 MHz, d₆-DMSO) δ ppm: 11.45 (s, 1H), 10.53-9.38 (br m, 1H), 8.64 (s, 1H), 8.01 (d, 2H, J=8.0 Hz), 7.64 (d, 2H, J=7.7 Hz), 4.67-2.76 (m, 13H), 2.34-1.24 (m, 13H), 1.20 (t, 6H, J=1.2 Hz) [ES+ MS] m/z 568 (M)^+.

To a solution of Intermediate 11 (120 mg, 0.23 mmol) in dry CH₃CN (4 mL) were added diisopropyl ethylamine (FLUKA, 60 µL, 0.34 mmol, 1.5 eq) and N-methylpiperazine (ALDRICH, 32 µL, 0.28 mmol, 1.2 eq) and left under stirring at room temperature for 1h.

The solvent was evaporated under reduced pressure and the resulting crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1% TFA, gradient 25-100%) to give the title compound. ¹H NMR (300 MHz, d₆-DMSO) δ ppm: 9.48 (br s, 1H), 8.64 (s, 1H), 8.10-7.92 (m, 2H), 7.39 (t, 1H, J=9.4 Hz), 5.62-3.82 (m, 2H), 3.69 (s, 2H), 3.44-2.86 (m, 6H), 2.77 (s, 3H), 2.45-2.20 (m, 3H), 1.84-1.13 (m, 8H), [ES+ MS] m/z 530 (M)^+.

Example 15: /V-(5-bromo-2-cyano-4-pyrimidinyl)-W-(cyclopentylmethyl)-4-{(4-[1-methyl-4-piperidinyl)methyl]-1-piperazinyl)methyl]benzohydrazide trifluoroacetate.

To a solution of Intermediate 6 (498 mg, 1.11 mmol) in dry CH₃CN (18 mL) were added diisopropyl ethylamine (FLUKA, 0.29 mL, 1.66 mmol, 1.5 eq) and 1-{[(1-methyl-4-piperidinyl)methyl]piperazine (ALDRICH, 263 mg, 1.33 mmol, 1.2 eq) and left under stirring at room temperature for 15h. The solvent was evaporated under reduced pressure and the resulting crude product was purified by preparative HPLC (XTERRA 50x250 mm, ACNiH₂O, 0.1% TFA, gradient 20-100%) to give the title compound. ¹H NMR (300 MHz, d₆-DMSO) δ ppm: 11.36 (s, 1H), 9.63-9.27 (br m, 1H), 8.73 (s, 1H), 7.95 (d, 2H, J=8.0 Hz).
Hz), 7.53 (d, 2H, J=8.0 Hz), 4.41-2.51 (m, 22H), 2.35-1.18 (m, 13H), [ES+ MS] m/z 609 (M)⁺.

Example 16: ΛT^S-bromo-2-cyano^-pyrimidinyO- Λ^cyclopentylmethylO-S^-methyl-
1-piperazinyl)methyl]benzohydrazide trifluoroacetate.

To a solution of Intermediate 12 (114 mg, 0.25 mmol) in dry CH₃CN (4 ml.) were added diisopropyl ethylamine (FLUKA, 66 µL, 0.38 mmol, 1.5 eq) and N-methylpiperazine (ALDRICH, 34 µL, 0.30 mmol, 1.2 eq) and left under stirring at room temperature for 6h. The solvent was evaporated under reduced pressure and the resulting crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 10-100%) and the remaining impurities were removed via a second preparative HPLC (SUNFIRE 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 20-50%) to give the title compound. ¹H NMR (300 MHz, d₆-DMSO) δ ppm: 11.37 (s, 1H), 8.63 (s, 1H), 7.89 (d, 1H, J=7.6 Hz), 7.86 (s, 1H), 7.61-7.49 (m, 2H), 4.18-2.86 (m, 12H), 2.77 (s, 3H), 2.29 (hept, 1H, J=7.5 Hz), 1.82-1.42 (m, 6H), 1.36-1.18 (m, 2H), [ES+ MS] m/z 512 (M)⁺.

Example 17: W-(5-bromo-2-cyano-4-pyrimidinyl)-W-(cyclopentylmethyl)-4-{{4-[(4-
methyl-1-piperazinyl)carbonyl]-1-piperidinyl}methyl}benzohydrazide trifluoroacetate.

To a solution of Intermediate 6 (200 mg, 0.44 mmol) in dry CH₃CN (8 mL) were added diisopropyl ethylamine (FLUKA, 0.26 mL, 1.54 mmol, 3.5 eq) and 1-methyl-4-(4-piperidinyl)carbonyl)piperazine (ALDRICH, 150.6 mg, 0.53 mmol, 1.2 eq) and left under stirring at room temperature for 16h. The solvent was evaporated under reduced pressure and the resulting crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 20-80%) to give the title compound. ¹H NMR (300 MHz, d₆-DMSO) δ ppm: 11.47 (s, 1H), 10.35-9.89 (br m, 1H), 8.63 (s, 1H), 8.01 (d, 2H, J=8.2 Hz), 7.66 (d, 2H, J=8.2 Hz), 4.51-2.82 (m, 17H), 2.78 (s, 3H), 2.34-2.24 (m, 1H), 1.97-1.18 (m, 12H), [ES+ MS] m/z 623 (M)⁺.

Example 18: W-(5-bromo-2-cyano-4-pyrimidinyl)-W-(cyclopentylmethyl)-4-{{4-(4-
morpholinyl)-1-piperidinyl}methyl}benzohydrazide.
To a solution of Intermediate 6 (91.0 mg, 0.20 mmol) in dry CH₂CN (4 mL) were added diisopropyl ethylamine (FLUKA, 53 µL, 0.30 mmol, 1.5 eq) and 4-(4-piperidinyl)morpholine (ALDRICH, 41.4 mg, 0.24 mmol, 1.2 eq) and left under stirring at room temperature for 18h. The solvent was evaporated under reduced pressure and the resulting crude product was purified by preparative HPLC (XTERRA 19x150 mm, ACN:H₂O, 0.1%TFA, gradient 20-80%) and the remaining impurities were removed via a second preparative HPLC using the same conditions to give the title compound. 

1H NMR (300 MHz, d6-DMSO) δ ppm: 11.45 (s, 1H), 10.33 (br s, 1H), 8.64 (s, 1H), 8.01 (d, 2H, J=8.2 Hz), 7.63 (d, 2H, J=8.2 Hz), 5.11-2.76 (m, 17H), 2.36-2.08 (m, 3H), 1.96-1.16 (m, 10H), [ES+ MS] m/z 582 (M)+.

**Example 19:** \(\text{\textsc{A}}^{\text{P}}\text{-fS-bromo-\text{\textsc{A}}^{\text{P}}-cyano-\text{\textsc{A}}^{\text{PyrimidinylO-}}\text{\textsc{A}}^{\text{T}}\text{-cyclopentylmethylO-S-i-\text{\textsc{A}}^{\text{P}}-\text{\textsc{A}}^{\text{4-(methyl-1-piperazinyl)methyl]methyl}benzohydrazide trifluoroacetate.}}\)

To a solution of Intermediate 12 (112 mg, 0.25 mmol) in dry CH₂CN (4 mL) were added diisopropyl ethylamine (FLUKA, 65 µL, 0.37 mmol, 1.5 eq) and 1-(N-methyl-4-piperidyl)-piperazine (ALDRICH, 54.9 mg, 0.30 mmol, 1.2 eq) and left under stirring at room temperature for 16h. The solvent was evaporated under reduced pressure and the resulting crude product was purified by preparative HPLC (SUNFIRE 19x150 mm, ACNiH₂O, 0.1%TFA, gradient 20-80%) to give the title compound. 

1H NMR (300 MHz, d6-DMSO) δ ppm: 11.47 (s, 1H), 9.68 (br s, 1H), 8.64 (s, 1H), 8.06 (d, 2H, J=7.5 Hz), 8.02 (s, 1H), 7.75-7.60 (m, 2H), 4.46-2.82 (m, 17H), 3.56 (s, 3H), 2.39-1.19 (m, 13H), [ES+ MS] m/z 595 (M)+.

**Example 20:** \(\text{\textsc{V-}5\text{-bromo-2-cyano-4-pyrimidinyl}-\text{\textsc{A}}^{\text{T}}\text{-cyclopentylmethyl}-5\text{-\text{\textsc{A}}^{\text{4-[4-(methyl-1-piperazinyl)methyl]phenyl]-3-pyridinecarbohydrazide trifluoroacetate.}}\)
To a solution of Intermediate 5 (259 mg, 0.87 mmol) in dry THF (30 mL), DIPEA (FLUKA, 0.302 mL, 1.74 mmol) and Intermediate 14 (349 mg, 1.31 mmol) were added. The solution was stirred at room temperature overnight. Then, DIPEA (FLUKA, 0.16 mL, 1.04 mmol), N-methylpiperazine (ALDRICH, 0.227 mL, 1.30 mmol) and sodium iodide were added. The reaction mixture was stirred at room temperature for three days. After filtration, the solvent was evaporated under reduced pressure and the residue was purified by preparative HPLC (XTERRA 30x150 mm, ACN:H2O, 0.1%TFA, gradient 30-80%) to give the title compound. 1H NMR (300 MHz, D2O-d6): 8.97 (m, 1H), 8.89 (m, 1H), 8.56 (m, 1H), 8.37 (s, 1H), 7.69 (d, 2H), 7.50 (d, 2H), 4.53 (br. s, 2H), 4.34 (s, 2H), 3.47 (br., 8H), 2.83 (s, 3H), 2.21 (m, 1H), 1.66-1.06 (m, 8H). [ES+ MS] m/z 589 (M)+.

Comparative Example 21: \( \Lambda \)-T-(5-bromo-2-cyano-4-pyrimidinyl)-r-(2,2-dimethylpropyl)-4-[(4-methyl-1-piperazinyl)methyl]benzohydrazide trifluoroacetate.

Intermediate 21 (1 g, 4.3 mmol) was dissolved in thionyl chloride (5 mL). The reaction mixture was stirred at room temperature for 17 hours. The solvent was evaporated in vacuo and the acid chloride was used without any further purification.

To a stirred solution of Intermediate 19 (200 mg, 0.70 mmol) in pyridine (1 mL) and DIPEA (5 mL), potassium carbonate (193 mg, 1.40 mmol) and previously obtained acid chloride (443 mg, 1.75 mmol) were added and the resulting reaction mixture was stirred at room temperature for 17 hours. The solvent was evaporated in vacuo and the crude reaction mixture was purified by flash chromatography (silica gel, dichloromethane:methanol). The solid was repurified by HPLC (H2O:ACN) to give the title compound. 1H NMR (300 MHz, DMSO) δ ppm: 11.33 (s, 1H), 8.64 (s, 1H), 7.91 (d, 2H), 7.49 (d, 2H), 3.72 (s, 2H), 3.37 (m, 2H), 3.25-2.81 (br, 6H), 2.78 (s, 3H) 0.99 (s, 9H). [ES+ MS] m/z 500 (MH+).

**Biological Assays**

The compounds of this invention may be tested in one of several biological assays to determine the concentration of compound which is required to have a given pharmacological effect.

1) **Determination of Falcipain-2, Falcipain-3, Vivapain-2, Cathepsin K Cathepsin S, Cathepsin L, and Cathepsin B proteolytic catalytic activity**

Assays for Falcipain-2, Falcipain-3, and Vivapain-2 are carried out with parasitic recombinant enzymes. Cathepsins K, S, L, and B are carried out with human
recombinant enzymes. Standard assay conditions for the determination of kinetic
constants used a fluorogenic peptide substrate, typically H-D-VLR-AFC (Falcipain-2,
Falcipain-3, Vivapain-2), Z-FR-AFC (Cathepsin K, L, B), or KQKL-AMC (Cathepsin S)
and are determined in 100 mM sodium acetate, pH 5.5, containing 10 mM DTT and 0.5
mM CHAPS (Falcipain-2, Falcipain-3, Vivapain-2), and 100 mM sodium acetate, pH 5.5,
containing 5 mM L-cysteine, 1mM CHAPS and 5mM EDTA (Cathepsin K, L, B), or 50mM
MES, pH 6.5, containing 0.5mM CHAPS, 10mM L-CYS, 5mM EDTA (Cathepsin S). Stock
substrate solutions are prepared at 20 mM in DMSO. The activity assays contained 30
μM substrate (Falcipain-2, Falcipain-3, Vivapain-2), 20 μM substrate (Cathepsin K), 25μM
substrate (Cathepsin B), 5μM substrate (Cathepsin L), and 30μM substrate (Cathepsin S).
All assays contained 1% DMSO. Independent experiments found that this level of DMSO
had no effect on enzyme activity or kinetic constants. All assays are conducted at ambient
temperature as end point assays being quenched after 60 minutes with the exception of
Cathepsin S at 90 minutes, with 16.6 μM E-64 in 1% DMSO. Product formation (AFC or
AMC) is determined from fluorescence (excitation at 405nM; emission at 530nM, AFC, or
excitation at 360 nM; emission at 460 nM, AMC) monitored with a LNL Aquest (Molecular
Devices) fluorescent plate reader. In the case of kinetic reads (used in mechanism of
action studies), the reaction is not quenched but is read in the plate reader every 3
minutes for approximately 90 minutes. In addition, the mechanism of action studies for
Falcipain-2 utilize Z-LR-AMC as the substrate. Product formation is determined from the
fluorescence of AMC, measured with a LNL Acquest (Molecular Devices) fluorescent plate
reader (excitation at 360nM; emission at 460nM).

Inhibition studies

Potential inhibitors are evaluated using the quenched read (endpoint) method. Assays
are carried out in the presence of variable concentrations of test compound. Reactions
are initiated by addition of enzyme and substrate to wells containing inhibitor stamped in
100% DMSO. For endpoint assays, the reaction is quenched with the addition of E64.
Dose response data is fit to an IC₅₀ curve with preset fitting tools according to equation 1:

\[ y = a + \frac{(b-a)}{(1+(10^x/10^p)d)} \]  \hspace{1cm} (1)

where \( y \) is the response at a particular inhibitor concentration \( x \), \( a \) is the minimum
response value, \( b \) is the maximum response value, \( c \) is the IC₅₀, and \( d \) is the slope of the
IC₅₀ curve. Assuming the compound is a competitive inhibitor, the apparent \( K_i \) can be
calculated from IC₅₀, as shown in equation 2:

\[ IC_{50} = \text{app}K_i = \frac{IC_{50}}{1+([S]/K_{M})} \] \hspace{1cm} (2)

where \( \text{app}K_i \) is the apparent \( K_i \), \( S \) is the concentration of substrate, \( K_{M} \) is the Michaelis
binding constant for substrate, and \( K_i \) is the binding constant of a competitive inhibitor for
free enzyme. For a more direct measurement of the $K_i$ and the binding mechanism, we performed mechanism of action studies that included a titration of substrate and inhibitor with a kinetic read. If the progress curves for each of these kinetic assays are linear, the measured rates ($v$) were fit to equation 3:

$$
v = \frac{V_m S}{[K_M (1 + [I] / K_i) + [S] (1 + [I] / aK_i)]}
$$

(3)

where $V_m$ is the maximum velocity, $S$ is the concentration of substrate with Michaelis constant of $K_M$, $[I]$ is the concentration of inhibitor, $K_i$ is the binding constant of inhibitor for free enzyme, and $aK_i$ is the binding constant of inhibitor for a potential enzyme-substrate complex.

For those compounds whose progress curves were nonlinear, with a decrease in enzyme activity over time characteristic of time-dependent inhibition, the progress curves were fit to equation 4 to yield the $k_{o b s}$:

$$
[AMC] = v_s t + (v_o - vss) [1 - \exp(-k_{o b s} t)] / k_{o b s}
$$

(4)

where $[AMC]$ is the concentration of product formed over time $t$, $v_o$ is the initial reaction velocity and $vss$ is the final steady state rate. The $k_{o b s}$ values were fit to equations 5 and 6, describing a one-step and two-step time dependent binding mechanism respectively:

$$
k_{o b s} = k_{o n} (1 + [I]ZaPf3K_i)
$$

(5)

$$
k_{o b s} = k_{o n} (1 + [I]/(appK_i + [I]))
$$

(6)

$$
3PPK_i = K_i (U[S]Z + K_M)
$$

(7)

Equation 7 describes the apparent $K_i$ for competitive compounds and was substituted into equations 5 and 6 to generate the relevant binding constants from the fitting routine. In addition, the initial and final velocities were fit to equation 3 to further define the binding mechanism and potency. A complete discussion of this kinetic treatment has been fully described (Morrison et al., Adv. Enzymol. Relat. Areas Mol. Biol., 1988, 61, 201).

2) Determination of whole cell activity against the Plasmodium falciparum parasite

Compounds can be evaluated for whole cell activity against the Plasmodium falciparum parasite according to the procedure described in Sijwali S. and Rosenthal P. J., (2004) Proceedings of the National Academy of Sciences of the United States of America (PNAS) 101(13), 4384-4389 (see in particular "Measurement of Parasite Growth rates and Inhibitor Sensitivity" on page 4385); IC$_{50}$ values can be calculated as described in Singh A. and Rosenthal P. J., (2001) Antimicrobial Agents and Chemotherapy 45(3), 949-951.
(see in particular page 950, first column); synchronised parasites can be prepared as described in Divo A. A. et al., (1985) Protozool. 32, 59-64.

3) In vitro models to evaluate activity against bone metastasis

3) Comparator compound

One compound was employed as a comparator compound. Comparative Example 21, which is a trifluoroacetate salt, was prepared as described hereinabove. The free base of this compound is disclosed in WO 2005/103012 A1 (page 124, Example 15(2)).

Comparative Example 21: \(N\)-(5-bromo-2-cyano^-pyrimidinyl)- \(\Lambda^*\)-(2,2H-methylpropyl)-4-[(4-methyl-1-piperazinyl)methyl]benzohydrazide trifluoroacetate.

It will be understood by the skilled artisan that under the enzymatic assay conditions described hereinabove, the assay result obtained for the free base of a given compound is expected to be the same as that obtained when a salt of that compound is tested. This is because the buffer used in the assay determines the pH under which the compound is tested; the pH determines the relative amounts of free base to salt of the compound being tested. This has been confirmed by testing in the enzymatic assays the free base, the hydrochloride salt and the trifluoroacetate salt of certain compounds of the type exemplified herein.

Results of assays

Cathepsin K

Examples 1-19 were tested in the enzymatic assay for cathepsin K. Example 20 was not tested in this assay. Examples 1-19 were found to have an IC\(_{50}\) value of less than 1.5 nM in the enzymatic assay for cathepsin K.
Falcipain-2 and falcipain-3 enzymatic assays, and whole cell assay

All exemplified compounds (Examples 1-20 and comparative Example 21) were tested in the enzymatic assays for falcipain-2 and for falcipain-3 according to the procedure described herein above.

Examples 1-19 and comparative Example 21 were tested in the whole cell assay according to the procedure described herein above. Example 20 was not tested in this assay.

The results of falcipain-2 and falcipain-3 enzymatic assays, and the whole cell assay for all exemplified compounds of the present invention (Examples 1-20) and for comparative Example 21 are shown in the table below.

The exemplified compounds of the invention exhibit an improved activity in each of the falcipain-2, falcipain-3 and whole cell assays, as compared with comparative Example 21 of the prior art.
Claims

1. At least one chemical entity selected from a compound of Formula I:

   \[
   \text{I}
   \]

Wherein:

- \(R^4\) represents halogen;
- \(R^2\) represents \(-\text{phenyl-}C_{1-3}\text{-alkylene-X}, \text{-pyridyl-phenyl-d}_3\text{-alkylene-X or -phenyl-d.}\)
  \(\text{-alkylene-X-R^J,}\)
  wherein phenyl is optionally substituted with one group selected from halogen or \(\text{CF}_3;\)
- \(R^J\) represents \(-C_{1-3}\text{-alkylene-Z or -C(O)Z;}\)
- \(X\) and \(Z\) independently represent a monocyclic 6-membered, saturated hydrocarbon group containing one or two nitrogen atoms and optionally an oxygen atom, which is optionally substituted with a group selected from: \(\text{C}^\text{alkyl, d^alkylOH, OH and NREF};\)
- \(R^E\) and \(R^F\) independently represent hydrogen or \(C_{1-4}\text{-alkyl;}\)

and pharmaceutically acceptable derivatives thereof.

2. At least one chemical entity according to claim 1 wherein \(R^4\) represents chlorine, bromine or iodine.

3. At least one chemical entity according to claim 1 or claim 2 wherein \(R^2\) represents \(-\text{pyridyl-phenyl-C}_{1-3}\text{-alkylene-X or -phenyl-C}_{1-3}\text{-alkylene-X-R^J,}\)
  wherein phenyl is optionally substituted with one group selected from halogen or \(\text{CF}_3;\)

4. At least one chemical entity according to any one of claims 1 to 3 wherein the alkyene group or groups in \(R^2\) is methylene.

5. At least one chemical entity according to any one of claims 1 to 4 wherein \(R^J\) represents \(-C_{1-3}\text{-alkylene-Z.}\)
6. At least one chemical entity according to any one of claims 1 to 5 wherein X represents optionally substituted piperidine or piperazine.

7. At least one chemical entity according to any one of claims 1 to 6 wherein Z represents optionally substituted piperidine, piperazine or morpholine.

8. At least one chemical entity selected from:

N’-(5-bromo-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-[(4-methyl-1-piperazinyl)methyl]benzohydrazide;

N’-(5-bromo-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-[(4-hydroxy-1-piperidinyl)methyl]benzohydrazide;

N’-(5-bromo-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-[[4-(2-hydroxyethyl)-1-piperazinyl]methyl]benzohydrazide;

N’-CS-bromo^=cyano^=pyrimidinylO-N’-CcyclopentylmethylO^=i-methyl^=piperidinylO-i-piperazinyl][methyl]benzohydrazide;

N’-(5-bromo-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-[(4-propyl-1-piperazinyl)methyl]benzohydrazide;

N’-(5-bromo-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-[(4-[[1-methyl-3-piperidinyl]methyl]-1-piperazinyl)methyl]benzohydrazide;

N’-(5-bromo-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-[(4-(2-hydroxyethyl)-1-piperidinyl)methyl]benzohydrazide;

N’-(5-bromo-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-[(4-(diethylamino)-1-piperidinyl)methyl]benzohydrazide;

N’-(5-bromo-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-fluoro-3-[(4-methyl-4-piperazinyl)carbonyl]-1-piperidinyl][methyl]benzohydrazide;

N’-(5-chloro-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-[(4-methyl-1-piperazinyl)methyl]benzohydrazide;

N’-(5-chloro-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-[(4-(4-methyl-1-piperazinyl)-1-piperidinyl)methyl]benzohydrazide;

N’-(5-bromo-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-fluoro-3-[(4-(4-morpholinyl)-1-piperidinyl)methyl]benzohydrazide;

N’-(5-bromo-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-[(4-(diethylamino)-1-piperidinyl)methyl]benzohydrazide;

N’-(5-bromo-2-cyano-4-pyrimidinyl)-N’-(cyclopentylmethyl)-4-fluoro-3-[(4-methyl-1-piperazinyl)methyl]benzohydrazide;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-[[4-(4-morpholinyl)-1-piperidinyl]methyl]benzohydrazide;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-3-[[4-(4-methyl-1-piperazinyl)-1-piperidinyl]methyl]benzohydrazide;
5 N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-5-[[4-(4-methyl-1-piperazinyl)methyl]phenyl]-3-pyridinecarbohydrazide; and pharmaceutically acceptable derivatives thereof.

9. At least one chemical entity selected from:
10 N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-[[4-(methyl-1-piperazinyl)methyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-[4-(4-hydroxy-1-piperidinyl)methyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-[4-(2-hydroxyethyl)-1-piperazinyl]methyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-[4-propyl-1-piperazinyl]methyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-[4-(1-methyl-3-piperidinyl)methyl]-1-piperazinyl]methyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-[4-(2-hydroxyethyl)-1-piperidinyl]methyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-[4-(4-methyl-1-piperazinyl)-1-piperidinyl]methyl]benzohydrazide trifluoroacetate;
N'-{(5-chloro-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-[[4-(1-methyl-3-piperidinyl)methyl]-1-piperazinyl]methyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-[4-(4-methyl-1-piperazinyl)-1-piperidinyl]methyl]benzohydrazide trifluoroacetate;
N'-{(5-chloro-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-[4-(4-methyl-1-piperazinyl)-1-piperidinyl]methyl]benzohydrazide trifluoroacetate;
N'-{(5-chloro-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-fluoro-3-[[4-(4-morpholinyl)-1-piperidinyl]methyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-(diethylamino)-1-piperidinyl]methyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-fluoro-3-[4-(4-methyl-1-piperazinyl)ethyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-(1-methyl-4-piperazinyl)methyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-(1-methyl-4-piperazinyl)methyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-3-[4-(4-methyl-1-piperazinyl)methyl]benzohydrazide trifluoroacetate;
N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-{{4-[4-(4-ethyl-1-piperazinyl)carbonyl]-1-piperidinyl}methyl}benzohydrazide trifluoroacetate; N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-4-{{4-(4-morpholinyl)-1-piperidinyl}methyl}benzohydrazide trifluoroacetate; N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-3-{{4-(4-methyl-1-piperazinyl)-1-piperidinyl}methyl}benzohydrazide trifluoroacetate; and N'-{(5-bromo-2-cyano-4-pyrimidinyl)-N'-(cyclopentylmethyl)-5-{4-[(4-methyl-1-piperazinyl)methyl]phenyl}-3-pyridinecarbohydrazide trifluoroacetate.

10. At least one chemical entity according to any one of claims 1 to 9 for use in medical therapy.

11. Use of at least one chemical entity according to any one of claims 1 to 9 in the manufacture of a medicament for the treatment of a condition susceptible to mediation by a cysteine protease inhibitor.

12. Use of at least one chemical entity according to any one of claims 1 to 9 in the manufacture of a medicament for the treatment of malaria.

13. A method for the treatment of a human or animal subject suffering from a condition susceptible to mediation by a cysteine protease inhibitor, comprising administering to said human or animal subject an effective amount of at least one chemical entity according to any one of claims 1 to 9.

14. A method for the treatment of a human or animal subject suffering from malaria, comprising administering to said human or animal subject an effective amount of at least one chemical entity according to any one of claims 1 to 9.

15. A pharmaceutical composition comprising at least one chemical entity according to any one of claims 1 to 9 in admixture with one or more pharmaceutically acceptable carrier and/or excipient.

16. A process for the preparation of compounds of Formula I as defined in claim 1, from a reaction between compounds of Formula II, wherein R^4 is as defined in claim 1 for Formula I, and compounds of Formula R^2COCI, wherein R^2 is as defined in claim 1 for Formula I, according to the Scheme below.
17. A process for the preparation of compounds of Formula I as defined in claim 1, from the corresponding acylhydrazide compounds of Formula XII, wherein $R^4$ is as defined in claim 1 for Formula I and $R^x$ is -arylhaloC$_3$alkylene or -heteroaryl-arylhaloC$_3$alkylene, by reaction with compounds of Formula XIII, which compounds are heterocyclyl or heterocyclyl-R$^j$, for example compounds XIII are "X" or "X-R$^j$", wherein "X" and "R$^j$" are as defined in claim 1 for Formula I, as depicted in the Scheme below.
