[57] ABSTRACT

As a herbicide 9-phenylimino-8-thia-1,6-diazabicy-clo[4.3.0]nonane-7-(one or thione) compound having the formula:

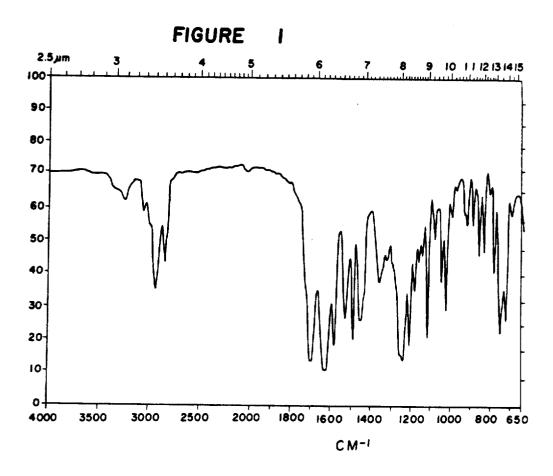

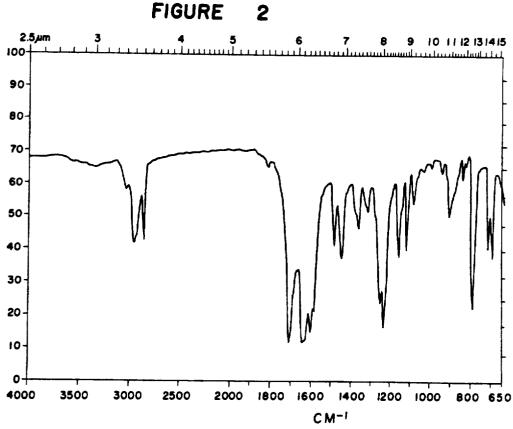

wherein Y represents halogen, hydroxyl, alkyl, alkoxy which may be substituted by halogen, alkenyloxy, alkynyloxy, phenoxy, cycloalkyloxy, alkoxycarbonylalkyloxy alkoxycarbonylalkyloxy, alkythiocarbonylalkyloxy, alkynyloxycarbonylalkyloxy, benzyloxycarbonylalkyloxy, trifluoromethyl, benzyloxy, alkenyl, cyanoalkyl, alkylcarbomoyloxy, benzyl, alkoxyalkyl, alkynyloxyalkyl, cycloalkylmethyloxy, alkoxyalkyloxy, phenethyloxy, cycloalkyloxycarbonylalkyloxy, pyrrolidinocarbonyl, phenylcarbonyl,

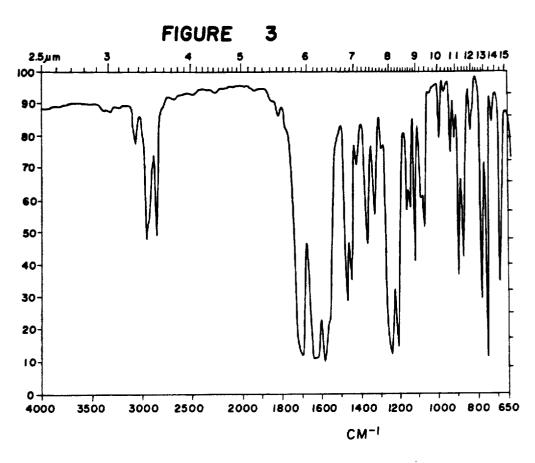

n is an integer of from 0 to 3; and X is oxygen or sulfur.

THIADIAZABICYCLONONANE DERIVATIVES, PROCESSES FOR THEIR PRODUCTION AND HERBICIDAL COMPOSITIONS

Matter enclosed in heavy brackets [] appears in the original patent but forms no part of this reissue specification; matter printed in italics indicates the additions made by reissue.

The present invention relates to novel 9-phenylimino-8-thia-1,6-diazabicyclo[4.3.0]nonane-7-(one or thione) derivatives, processes for their production and herbicidal compositions containing them.

In recent years, a number of herbicides have been developed and actually used, and they have contributed to the reduction of the agricultural work load and to the improvement of the productivity. As a herbicide having a hetero ring, Ronstar [i.e. 5-t-butyl-3-(2,4-dichloro-5-isopropoxyphenyl)-1,3,4-oxadiazoline-2-one] is widely used. However, Ronstar has drawbacks that it is likely to bring about phytotoxicity, and it is not effective against perennial weeds, particularly against Sagitaria pygmaea. Accordingly, a development of a herbicide having improved effectiveness and safety has been desired.

Under the circumstances, the present inventors have conducted extensive researches with an aim to develop a herbicide which satisfies the following conditions, and have finally accomplished the present invention.

- (1) It is effective at a low dose.
- (2) It is effective against paddy field weeds and (or) against upland field weeds.
 - (3) It is also effective against perennial weeds.
- (4) It is effective in a wide range covering the germination stage to the growing stage.
- (5) It has excellent residual effects and can be expected to provide stabilized effects.
 - (6) It exhibits excellent herbicidal effects.
 - (7) It is highly safe to crop plants.

Thus, the present invention provides a 9-phenylimino-8-thia-1,6-diazabicyclo[4.3.0]nonane-7-(one or thione) derivative having the formula:

wherein Y which may be the same or different, represents halogen, hydroxy, alkyl, alkoxy which may be substituted by halogen, alkenyloxy which may be substituted by halogen, alkynyloxy, phenoxy, cycloalkyloxy, alkoxycarbonylalkyloxy, alkoxycarbonylalkyloxy, alkynyloxycarbonylalkyloxy, alkynyloxycarbonylalkyloxy, benzyloxycarbonylalkyloxy, trifluoromethyl, benzyloxy which may be substituted by chlorine or alkyl, alkenyl, cyanoalkyl, alkylcarbamoyloxy, benzyl which may be substituted by one or two alkyl, alkoxyalkyl, alkynyloxyalkyl, cycloalkylmethyloxy which may be substituted by halogen, alkoxyalkyloxy, phenethyloxy, cycloalkyloxycarbonylalkyloxy, pyr-

rolidinocarbonyl, phenylcarbonyl which may be substituted by alkyl,

[wherein R₁ is hydrogen, alkyl, phenyl, cycloalkyl, alkoxyalkyl, alkoxycarbonylalkyl or

(wherein R_2 is hydrogen or alkoxy), X is oxygen or sulfur,

(wherein R₃ is alkyl, alkenyl or alkynyl, and m is 0 or 2),

[wherein R₄ is hydrogen or alkyl, and R₅ is hydrogen, alkyl, alkoxyalkyl, tetrahydrofurfuryl, alkoxyalkyloxyalkyl, alkoxycarbonylalkyl, cycloalkyl or —N=C(CH-35 3)—R₆ (wherein R₆ is alkyl or phenyl)], —NHR₇ (wherein R₇ is alkylcarbonyl or alkoxycarbonylalkyl),

(wherein R₈ is hydrogen or alkyl, and R₉ is alkoxy, cycloalkyloxy or 1-pyrrolidinyl), or

50 (wherein X is as defined above); n is an integer of from 0 to 3; and X is oxygen or sulfur.

The present invention also provides a process for producing a 9-phenylimino-8-thia-1,6-diazabicy-clo[4.3.0]nonane-7-(one or thione) derivative having the formula:

wherein Z which may be the same or different, represents halogen, alkyl, alkoxy which may be substituted

40

60

by halogen, alkenyloxy which may be substituted by halogen, alkynyloxy, phenoxy, cycloalkyloxy, alkoxycarbonylalkyloxy, alkylthiocarbonylalkyloxy, alkynyloxycarbonylalkyloxy, benzyloxycarbonylalkyloxy, trifluoromethyl, benzyloxy which may be substituted by chlorine or alkyl, alkenyl, cyanoalkyl, alkylcarbamoyloxy, benzyl which may be substituted by one or two alkyl, alkoxyalkyl, alkynyloxyalkyl, cycloalkylmethyloxy, alkoxyalkyloxy, phenethyloxy, cycloalkyloxycarbonylalkyloxy, pyrrolidinocarbonyl, phenylcarbonyl which may be substituted by alkyl,

[wherein R₁ is hydrogen, alkyl, phenyl, cycloalkyl, 20 alkoxyalkyl, alkoxycarbonylalkyl or

(wherein R_2 is hydrogen or alkoxy), X is oxygen or sulfur],

(wherein R₃ is alkyl, alkenyl or alkynyl, and m is 0 or 2),

[wherein R₄ is hydrogen or alkyl, and R₅ is hydrogen, alkyl, alkoxyalkyl, tetrahydrofurfuryl, alkoxyalkyloxyalkyl, alkoxycarbonylalkyl, cycloalkyl or —N=C(CH₃)—R₆ (wherein R₆ is alkyl or phenyl)], —NHR₇ (wherein R₇ is alkylcarbonyl),

(wherein R₈ is hydrogen or alkyl, and R₉ is alkoxy, cycloalkyloxy or 1-pyrrolidinyl), or

(wherein X is as defined above); n is an integer of from 0 to 3; and X is oxygen or sulfur, which comprises reacting a compound of the formula:

$$\begin{array}{c|c}
S & & \\
N-CHN & & \\
N+CHN & & \\
N+CHN & & \\
\end{array}$$
(II)

wherein Z and n are as defined above, with a compound of the formula:

CXCl₂

wherein X is as defined above.

Further, the present invention provides a process for producing a 9-phenylimino-8-thia-1,6-diazabicy-clo[4.3.0]nonane-7-(one or thione) derivative having the formula:

$$\bigvee_{\substack{N \\ | \\ N \\ | \\ X}} \bigvee_{\substack{S \\ OR}} W_n \qquad (V)$$

wherein W which may be the same or different, represents halogen; R is alkyl which may be substituted by halogen, alkenyl which may be substituted by halogen, alkynyl, alkoxycarbonylalkyl, alkoxycarbonylalkenyloxy, alkylthiocarbonylalkyl, alkynyloxycarbonylalskyl, benzyloxycarbonylalskyl, benzyloxycarbonylalsubstituted by chlorine or alkyl, alkylcarbamoyl, cycloalkylmethyl which may be substituted by halogen, phenethyl,

45 [wherein R₄ is hydrogen or alkyl, and R₅ is alkyl, alkoxyalkyl, tetrahydrofurfuryl, alkoxyalkyloxyalkyl, alkoxycarbonylalkyl, cycloalkyl or —N=C(CH₃)—R₆ (wherein R₆ is alkyl or phenyl)], or

55 (wherein X is oxygen or sulfur); n is an integer of from 0 to 3; and X is oxygen or sulfur, which comprises reacting a compound of the formula:

wherein W, X and n are as defined above, with a compound of the formula RT wherein R is as defined above, and T is halogen.

Furthermore, the present invention provides a herbicidal composition comprising a herbicidally effective amount of a compound of the formula I as defined above and a carrier.

Now, the present invention will be described in detail with reference to the preferred embodiments.

In the accompanying drawings:

FIG. 35 is the infrared absorption spectrum of Compound No. 157.

In the formula I, Y is preferably halogen, alkoxy which may be substituted by halogen, alkenyloxy which may be substituted by halogen, alkynyloxy, phenoxy, benzyloxy which may be substituted by chlorine or alkyl,

swherein R₁ is hydrogen, alkyl, phenyl, cycloalkyl, alkoxyalkyl, alkoxycarbonylalkyl or

FIG. 13 is the infrared absorption spectrum of Com- 35 (wherein R₂ is hydrogen or alkoxy), X is oxygen or sulfur).

[wherein R4 is hydrogen or alkyl, and R5 is hydrogen, FIG. 18 is the infrared absorption spectrum of Com- 45 alkyl, alkynyl, benzyl, alkoxyalkyl, tetrahydrofurfuryl, alkoxyalkyloxyalkyl, alkoxycarbonylalkyl, cycloalkyl or $-N=C(CH_3)R_6$ (wherein R_6 is alkyl or phenyl)].

A compound having the formula:

wherein A is hydrogen or halogen, B is halogen, and R₅ is hydrogen, alkyl, alkynyl, benzyl, alkoxyalkyl, tetrahydrofurfuryl, alkoxyalkyloxyalkyl, alkoxycarbonylalkyl, cycloalkyl, or $-N = C(CH_3)R_6$ (wherein R6 is alkyl or phenyl), is effective particularly as a herbicide for a soybean field. Particularly preferred in this respect is a compound of the formula:

5 •

10

wherein A is hydrogen or halogen, B is halogen, and R₁₀ is hydrogen, alkyl, alkynyl, alkoxyalkyl, alkoxyalkyloxyalkyl, or tetrahydrofurfuryl.

As a herbicide for a non-agricultural field, a compound of the formula:

wherein A is hydrogen or halogen, B is halogen, and R_1 is hydrogen, alkyl, phenyl, cycloalkyl, alkoxyalkyl, 30 alkoxycarbonylalkyl or

(wherein R2 is hydrogen or alkoxy), is particularly useful. Particularly preferred in this respect is a compound 40 having the formula:

wherein Hal is halogen, and R₁₁ is hydrogen or alkyl. Typical examples of the compound of the formula I are presented in Table 1.

quinoline; or an inorganic base such as sodium hydroxide, potassium hydroxide, potassium carbonate or sodium carbonate.

The above reaction is preferably conducted in a solvent. As such a solvent, there may be mentioned a chlorine-containing hydrocarbon such as dichloromethane,
chloroform or carbon tetrachloride; an ether such as
diethyl ether, tetrahydrofuran or dioxane; a hydrocarbon such as n-hexane, benzene or toluene; an aliphatic
ketone such as acetone or methyl ethyl ketone; dimethylsulfoxide; or N,N-dimethylformamide.

The above-mentioned condensation reaction can be 15 completed in from 1 to 7 hours at a temperature within a range of from -20° C. to the boiling point of the solvent.

wherein X, W, R and n are as defined above.

This process can be conducted by reacting the compound of the formula V with an acid such as hydrobromic acid or aluminum chloride in the presence of a solvent, for instance, a fluorine-containing hydrocarbon such as chloroform or carbon tetrachloride, or a hydrocarbon such as benzene or toluene. This reaction can be completed in from 1 to 7 hours at a temperature within a range of from 0° C. to the boiling point of the solvent.

$$(c)$$

14

wherein W, X, R, T and n are as defined above.

This process can be conducted by reacting the compound of the formula VI with the compound of the formula VII in the presence of the same base and solvent as used in process (a) at a temperature within a range of from -20° C. to the boiling point of the solvent for from 1 to 7 hours.

Now, the present invention will be described in further detail with reference to Examples. However, it should be understood that the present invention is by no 25 means restricted by these specific Examples.

Firstly, Examples for the preparation of the compounds of the present invention will be described.

Preparation Example 1

9-(4-Chlorophenylimino)-8-thia-1,6-diazabicyclo[4.3.0-]nonane-7-one (Compound No. 12)

In a reaction flask, 3.2 g (13 mmol) of 1,2-tetramethy-lene-1-(4-chlorophenylthiocarbamoyl)-hydrazine, 2.2 g (28 mmol) of pyridine ad 20 ml of dichloromethane, were charged, and a dichloromethane solution containing 1.5 g (15 mmol) of phosgene was dropwise added while cooling the mixture with ice water. After the dropwise addition, the mixture was stirred at room temperature for 3 hours to complete the reaction. The reaction solution was washed with water, and dried over anhydrous sodium sulfate, and then the solvent was distilled off to obtain a crude product. This crude product was recrystallized from isopropyl ether to obtain 3.2 g (yield: 74%) of white crystals. Melting point: 82°-85° C.

Preparation Example 2

9-(4-Chlorophenylimino)-8-thia-1,6-diazabicyclo[4.3.0-]nonane-7-thione (Compound No. 41)

Into a reaction flask, 2.4 g (9 mmol) of 1,2-tetramethylene-1-(4-chlorophenylthiocarbamoyl)-hydrazine, 2.0 g (25 mmol) of pyridine and 20 ml of dichloromethane, were charged, and 1.3 g (11 mmol) of thiophosgene was dropwise added while cooling the mixture with ice water. After the dropwise addition, the
mixture was stirred at room temperature for 3 hours to
complete the reaction. After the completion of the reaction, the reaction solution was washed with water, and
dried over anhydrous sodium sulfate, and the solvent
was distilled off to obtain a crude product. This crude
product was recrystallized from isopropyl ether to obtain 2.1 g (yield: 75%) of brown crystals. Melting point:
96°-97° C.

Preparation Example 3

9-(4-Chloro-3-hydroxyphenylimino)8-thia-1,6diazabicyclo[4.3.0]nonane-7-one (Compound No. 46)

Into a reaction flask equipped with a Dimroth condenser, 1.7 g (5 mmol) of 9-(4-chloro-3-isopropoxyphenylimino)-8-thia-1,6-diazabicyclo[4.3.0]nonane-7-one, 1.3 g (10 mmol) of aluminum chloride and 50 ml of chloroform, were charged, and refluxed under heating for 2 hours to complete the reaction.

The reaction solution was poured into ice water, and the organic layer was washed with water and dried over anhydrous sodium sulfate, and the solvent was distilled off to obtain a crude product.

tography to obtain 1.2 g (yield: 80%) of colorless crystals. Melting points: 130°-132° C.

Preparation Example 4

9-(4-Chloro-2-fluoro-3-propargyloxyphenylimino)-8thia-1,6-diazabicyclo[4.3.0]nonane-7-one (Compound No. 35)

Into a reaction flask equipped with a Dimroth condenser, 2.2 g (7 mmol) of 9-(4-chloro-2-fluoro-3-hydrox-25 yphenylimino)-8-thia-1,6-diazabicyclo[4.3.0]nonane-7-one, 1.1 g (9 mmol) of propargyl bromide, 1.3 g (9 mmol) of potassium carbonate and 20 ml of acetonitrile, were charged, and refluxed under heating for 3 hours to complete the reaction.

extracted with ethyl acetate, and then washed with water and dried over anhydrous sodium sulfate. The solvent was distilled off to obtain a crude product, which was then recrystallized from isopropyl ether to obtain 1.6 g (yield: 64%) of white crystals. Melting 35 point: 132°-134° C.

Preparation Example 5

9-(4-Chloro-2-fluoro-5-ethoxycarbonylphenylimino)-8thia-1,6-diazabicyclo[4.3.0]nonane-7-one (Compound No. 112)

Into a reaction flask, 3.8 g (11 mmol) of 1,2-tetramethylene-1-(4-chloro-2-fluoro-5-ethoxycarbonylphenylthiocarbamoyl)hydrazine, 2.1 g (26 mmol) of 45 pyridine and 20 ml of dichloromethane, were charged, and a dichloromethane solution containing 1.3 g (13 mmol) of phosgene, was dropwise added while cooling the mixture with ice water. After the dropwise addition, the mixture was stirred at room temperature for 1 hour 50 to complete the reaction. The reaction solution was washed with water and dried over anhydrous sodium sulfate, and then the solvent was distilled off to obtain a crude product. This crude product was purified by column chromatography to obtain 2.8 g (yield: 68%) of 55 colorless sticky substance. Refractive index: n_D²⁰ 1.6002.

Preparation Example 6

9-{4-Chloro-2-fluoro-5-(1-methoxyethoxycarbonylethoxy)phenylimino}-8-thia-1,6-diazabicyclo[4.3.0]nonane-7-one (Compound No. 128)

Into a reaction flask equipped with a Dimroth condenser, 1.9 g (6 mmol) of 9-(4-chloro-2-fluoro-3-hydroxyphenylimino)-8-thia-1,6-diazabicyclo[4.3.0]nonane-7-one, 1.3 g (6 mmol) of methoxyethyl 2-bromopropionate, 1.0 g (6 mmol) of potassium carbonate and 20 ml of acetonitrile, were charged, and refluxed under heating for 40 minutes to complete the reaction. The reaction solution was filtered, concentrated, extracted with ethyl ether, and then washed with water and dried over anhydrous sodium sulfate. The solvent was distilled off to obtian a crude product, which was purified by column chromatography to obtain 1.2 g (yield: 46.1%) of slightly brown liquid. Refractive index: n_D²⁰ 1.5749

Preparation Example 7

9-{4-Chloro-3-[1-(ethoxycarbonyl)ethylamino]phenylimino}-8-thia-1,6-diazabicyclo[4.3.0]nonane-7-one (Compound No. 72)

Into a reaction flask equipped with a Dimroth con-The crude product was purified by column chroma. 15 denser, 2.2 g (7.4 mmol) of 9-(4-chloro-3-aminophenylimino)-8-thia-1,6-diazabicyclo[4.3.0]nonane-7-one, 15 ml of ethyl 2-bromopropionate and 2.0 g (24 mmol) of sodium hydrogen carbonate, were charged, and refluxed under heating for 4 hours to complete the reaction. The reaction solution was filtered, concentrated and extracted with ethyl acetate, and then washed with water and dried over anhydrous sodium sulfate. The solvent was distilled off to obtain a crude product, which was purified by column chromatography to obtain 1.5 g (yield: 52%) of colorless oily substance. Refractive index: n_D²⁰ 1.5755

The 9-phenylimino-8-thia-1,6-diazabicyclo[4.3.0]nonane-7-(one or thione) derivative of the formula I is The reaction solution was filtered, concentrated, used as a herbicide for a paddy rice field, an upland field, an orchard or a non-agricultural field, the active ingredient can be used in a suitable formulation depending upon the particular purpose. Usually, the active ingredient is diluted with an inert liquid or solid carrier, and used in the form of a formulation such as a dust, a wettable powder, an emulsifiable concentrate, a granule, etc., if necessary by adding a surfactant and other additives. Further, the compound of the present invention may be used in combination with an insecticide, a nematocide, a fungicide, other herbicides, a plant growth controlling agent, a fertilizer, etc., as the case requires.

> Now, the formulations will be described in detail with reference to typical Formulation Examples. In the following Formulation Examples, "parts" means "parts by weight".

Formulation Example 1

Wettable power

10.0 parts of Compound No. 43, 0.5 part of Emulgen (trademark of Kao Soap Co., Ltd.) 810, 0.5 part of Demol trademark of Kao Soap Co., Ltd.) N, 20.0 parts of Kunilite (trademark of Kunimine Kogyo K.K.) 201, and 69.0 parts of Zeeklite (trademark of Zeeklite Co., Ltd.) CA, were mixed and pulverized to obtain a wettable powder containing 10% of an active ingredient.

Formulation Example 2

Wettable powder

10.0 parts of Compound No. 33, 0.5 part of Emulgen 65 810, 0.5 part of Demol N, 20.0 parts of Kunilite 201, 5.0 parts of Carplex 80 and 64.0 parts of Zeeklite CA, were mixed and pulverized to obtain a wettable powder containing 10% of the active ingredient.

Formulation Example 3

Emulsifiable concentrate

To 30 parts of Compound No. 19, 60 parts of a mixture of xylene and isophorone in equal amounts and 10⁵ parts of surfactant Sorpol (trademark of Toho Kagaku Kogyo K.K.) 800A, were added, and the mixture was thoroughly mixed to obtain 100 parts of an emulsifiable concentrate.

Formulation Example 4

Granules

10 parts of water was added to 10 parts of Compound No. 21, 80 parts of a filler obtained by mixing talc and 15 bentonite in a ratio of 1:3, 5 parts of white carbon and 5 parts of surfactant Sorpol N 800A, and the mixture was thoroughly kneaded to obtain a paste, which was extruded from sieve openings having a diameter of 0.7 mm and dried, and then cut into a length of from 0.5 to 1 20 mm, to obtain 100 parts of granules.

The compounds of the formula of the present invention exhibit excellent herbicidal effects at a very low dose in a wide range from the germination stage to the growing stage of annual weeds such as barnyardgrass (Echinochloa crus-galli), umbrella-plant (Cyperus difformis L.), monochoria (Monochoria vaginalis Presl), spike-flowered rotala (Rotalal indica Koehne), false pimpernel (Lindernia procumbens Philcox) and Dopatrium junceum Hamilt, and perennial weeds such as 30 bulrush (Scirpus juncoides Roxb.), slender spikerush (Eleocharis acicularis Roem. et Schult.), water plantain (Alisma canaliculatum A. Br. et Bouche), Sagittaria (Sagittaria pygmaea Miq.) and cyperus sp. (Cyperus serotinus Rottb.) which grow in paddy fields. At the 35 same time, they have high selectivity for paddy field rice. Further, they exhibit high herbicidal effects, by soil treatment or by foliage treatment, against various weeds in the upland fields, for example, broad leaf weeds such as smart weed (Polygonum nodosum L.), 40 pigweed (Amaranthus retroflexus), lambsquaters (Chenopodium album), common chickweed (Stellaria media), speed well (Veronica persica), wild mustard (Brassica kaber var. pinnatifida) and cocklebur (Xanthium strumarium), cyperaceous weeds such as rice 45 flatsedge (Cyperus iria L.), and gramineous weeds such as barnyardgrass, large crabgrass (Digitaria sanguinalis) and green foxtail (Setaria viridis). At the same time, they have a feature that they are highly safe to crop plants such as upland rice, wheat, soybean and corn.

The dose of the compound of the present invention is usually within a range of from 10 g to 15 kg/ha. More specifically, the dose is usually from 30 g to 5 kg/ha for upland fields, from 10 g to 1 kg/ha for paddy rice fields,

and from 200 g to 5 kg/ha for non-agricultural fields.

Further, the compounds of the present invention

55 have excellent residual effects, and show stabilized effects for a long period of time also in paddy fields. They are also useful for orchard, grassland, lawn and nonagricultural fields.

Now, the herbicidal effects of the herbicides of the 60 present invention will be described with reference to Text Examples.

Text Example 1

Herbicidal test by soil treatment of paddy field

Into a 100 cm² porcelain pot, paddy field soil was filled and puddled. Then, seeds of barnyardgrass, umbrella plant, monochoria and bulrush were sown, and water was introduced to a depth of 3 cm.

Next day, the wettable powder prepared in accordance with Formulation Example 1, was diluted with water and dropwise applied to the surface of the water. The amount of the active ingredient applied, was 400 g/10a. Then, the pot was left in a green house. Twenty one days after the application, the herbicidal effects were evaluated in accordance with the standards identi-10 fied in Table 3. The results are shown in Table 4.

		IABLE 3

In pot A, three germinated tubers of each of flat sedge and sagittaria, were embedded in the surface layer of the soil, and two seedlings of two rice plants of 2.2 leaf stage, were transplanted in a depth of 2 cm.

In pot B, seeds of barnyardgrass, hardstem bulrush, narrow leaf water plantain, monochoria and umbrella plant were sown in the surface layer of the soil.

The day after the seeding and transplantation, a prescribed amount of a wettable powder of each com-10 pound formulated in accordance with Formulation Example 1, was diluted with water and dropwise applied by a pipette.

Thirty days after application, the herbicidal effect and phytotoxicity were evaluated in accordance with 15 the standards identified in Table 3. The results are shown in Table 5.

Test Example 2

Low dose test in soil treatment of irrigated paddy field 65 Into a 1/5,000a Wagner pot, paddy field soil was filled and puddled, and water was introduced to a depth of 3 cm.

Text Example 3

The herbicidal test in soil treatment of upland field

Into a 120 cm² plastic pot, upland field soil was filled, and seeds of barnyardgrass, large crabgrass, smart weed, pigweed, lambsquaters and rice flatsedge were sown and covered with soil.

A wettable powder of each test compound formulated in accordance with Formulation Example 1, was diluted with water in an amount of 100 liter/10a and uniformly applied to the surface of soil by means of a small size spray at a dose of 400 g/10a of the active 5 ingredient. After the application, the pot was left for 21 days in a green house, and then the herbicidal effects were evaluated in accordance with the standards identified in Table 3. The results are shown in Table 6.

Text Example 4

The herbicidal test in foliage treatment in upland field

Into a 120 cm² plastic pot, upland field soil was filled, and seeds of barnyardgrass, large crabgrass, smart weed, pigweed, lambsquater and rice flatsedge, were sown, and grown in a green house until barnyardgrass 35 grew to the 3 leaf stage. When barnyardgrass reached the 3 leaf stage, a wettable powder of each test compound formulated in accordance with Formulation Example 1 was diluted with water in an amount of 100 liter/10 a and applied to the foliage of the plants from 40 above by a small size spray at a dose of 400 g/10 a of the active ingredient. After the application, the pot was left for 21 days in a green house, and then the herbicidal effects were evaluated in accordance with the standards identified in Table 3. The results are shown in Table 7. 45

Test Example 7

Herbicidal test in the soil treatment of upland field

To a 120 cm² plastic pot, upland field soil was filled and seeds of barnyardgrass, large crabgrass, smart weed, pigweed, lambsquater and rice flatsedge were 20 sown and covered with soil. A wettable powder of each compound formulated in accordance with Formulation Example 1, was diluted with water in an amount of 100 liter/10a and uniformly applied to the surface of the soil by a small size spray at a dose of 400 g/10a of the active 2 ingredient. After the treatment, the pot was left in a green house for 21 days, and then the herbicidal effects were evaluated in accordance with the standards identified in Table 3. The results are shown in Table 10.

Text Example 8

142

Herbicidal test in the foliage treatment of upland field

Into a 120 cm² plastic pot, upland field soil was filled, and seeds of barnyardgrass, large crabgrass, smart weed, pigweed, lambsquater and rice flatsedge, were sown, and grown in a green house until barnyardgrass 60 grew to the 3 leaf stage. When barnyardgrass reached the 3 leaf stage, a wettable powder of each test compound prepared in accordance with Formulation Example 1 was diluted with water in an amount of 100 liter/-10a and applied to the foliage of the plants from above 65 by a small size spray at a dose of 400 g/10a of the active ingredient. After the application, the pot was left in a green house for 21 days, and then the herbicidal effects

were evaluated in accordance with the standards identified in Table 3. The results are shown in Table 11.

wherein Y which may be the same or different, represents chlorine, bromine, fluorine, hydroxyl, lower alkyl, lower alkoxy which may be substituted by chlorine, bromine or fluorine, lower alkenyloxy which may be substituted by chlorine, bromine or fluorine, lower alkynyloxy, phenoxy, lower cycloalkyloxy, lower alkox- 30 yearbonyl-lower alkenyloxy, lower alkylthiocarbonyllower alkyloxy, lower alkynyloxycarbonyl-lower alkyloxy, benzyloxycarbonyl-lower alkyloxy, trifluoromethyl, benzyloxy which may be substituted by chlorine or lower alkyl, lower alkenyl, cyano-lower alkyl, 35 lower alkylcarbamoyloxy, benzyl which may be substituted by one or two lower alkyl, lower alkoxy-lower alkyl, lower alkynyloxy-lower alkyl, lower cycloalkylmethyloxy which may be substituted by chlorine, bromine or fluorine, lower alkoxy-lower alkyloxy, phenethyloxy, lower cycloalkyloxycarbonyl-lower alkyloxy, pyrrolidinocarbonyl, phenylcarbonyl which may be substituted by lower alkyl,

wherein R_1 is hydrogen, lower alkyl, phenyl, lower 50 cycloalkyl, lower alkoxy-lower alkyl, lower alkoxycar-bonyl-lower alkyl or

(wherein R_2 is hydrogen or lower alkoxy), X is oxygen 60 or sulfur,

(wherein R_3 is lower alkyl, lower alkenyl or lower alkynyl, and m is 0 or 2),

wherein R₄ is hydrogen or lower alkyl, and R₅ is hydrogen, lower alkyl, lower alkoxy-lower alkyl, tetrahydrofurfuryl, lower alkoxy-lower alkyloxy-lower alkyl, lower alkoxycarbonyl-lower alkyl or N=C(CH₃)-R₆ (wherein R₆ is lower alkyl or phenyl), -NHR₇ (wherein R₇ is lower alkylcarbonyl or lower alkoxycarbonyl-lower alkyl),

20 (wherein R₈ is hydrogen or lower alkyl, and R₉ is lower alkoxy, lower cycloalkyloxy or pyrrolidinyl), or

(wherein X is as defined above); n is an integer or from 0 to 3; and X is oxygen or sulfur.

2. The compound according to claim 1, wherein Y is chlorine, bromine or fluorine, lower alkoxy which may be substituted by chlorine, bromine or fluorine, lower alkenyloxy which may be substituted by chlorine, bromine or fluorine, lower alkynyloxy, phenoxy, benxyloxy which may be substituted by chlorine or lower alkyl,

wherein R₁ is hydrogen, lower alkyl, phenyl, lower cycloalkyl, lower alkoxy-lower alkyl, lower alkoxycar-bonyl-lower alkyl or

(wherein R_2 is hydrogen or lower alkoxy), X is oxygen or sulfur,

wherein R₄ is hydrogen or lower alkyl, and R₅ is hydrogen, lower alkyl, lower alkynyl, benzyl, lower alkoxylower alkyl, tetrahydrofurfuryl, lower alkoxylower alkyloxylower alkyl, lower alkoxycarbonyllower alkyl, lower cycloalkyl, or —N=C(CH₃)R₆ (wherein R₆ is lower alkyl or phenyl).

3. The compound according to claim 1, which has the formula:

25

45

wherein A is hydrogen, chlorine, bromine or fluorine, B is chlorine, bromine or fluorine, and R₅ is hydrogen, lower alkyl, lower alkynyl, benzyl, lower alkoxy-lower 15 alkyl, tetrahydrofurfuryl, lower alkoxy-lower alkyloxy-lower alkyl, lower alkoxycarbonyl-lower alkyl, lower cycloalkyl, or —N=C(CH₃)R₆ (wherein R₆ is lower alkyl or phenyl).

4. The compound according to claim 1, which has the formula:

wherein A is hydrogen, chlorine, bromine or fluorine, B 35 is chlorine, bromine or fluorine, and R₁₀ is hydrogen, lower alkyl, lower alkynyl, lower alkoxy-lower alkyl, lower alkoxy-lower alkyl, or tetrahydrofurfuryl.

5. The compound according to claim 1, which has the formula:

wherein A is hydrogen, chlorine, bromine or fluorine, B is chlorine, bromine or fluorine, and R_1 is hydrogen, lower alkyl, phenyl, lower cycloalkyl, lower alkoxylower alkyl, lower alkoxylower alkyl, or

(wherein R2 is hydrogen or lower alkoxy).

6. The compound according to claim 1, which has the formula:

wherein [Hal is chlorine, bromine or fluorine, and] R₁₁ is hydrogen or lower alkyl.

7. A herbicidal composition comprising a herbicidally effective amount of a compound of the formula I as defined in claim 1 and a carrier.

8. A 9-phenylimino-8-thia-1,6-diazabicyclo[4.3.0]no-nane-7-(one or thione) compound having the formula:

wherein Y is at least one halogen and a group represented by the formula:

wherein R₈ is hydrogen or lower alkyl, and R₉ is lower alkoxy, lower cycloalkyloxy or pyrrolidinyl; X is oxygen or sulfur, and n is an integer from 2 to 3.

9. The compound according to claim 8, wherein R9 is 40 lower alkoxy.

10. The compound according to claim 8, wherein n is 3 having two chlorine or fluorine radicals and one radical of the formula

wherein R_8 is hydrogen or lower alkyl, and R_9 is lower 50 alkoxy, lower cycloalkoxy or pyrrolidinyl.

11. The compound according to claim 9, wherein n is an integer from 2 to 3.

12. The compound according to claim 11, wherein n is 3 having two chlorine or fluorine radicals and one radical of the formula:

wherein R₈ is hydrogen or lower alkyl, and R₉ is lower alkoxy, lower cycloalkoxy or pyrrolidinyl.

13. The compound according to claim 6, wherein R_{11} is ethyl.

14. The compound according to claim 6, wherein R₁₁ is 65 hydrogen.

15. The compound according to claim 6, wherein R_{11} is isopropyl.
