# UNITED STATES PATENT OFFICE.

CARTER DE MURGUIONDO, OF BROOKLYN, NEW YORK.

## STOCKING PURSE.

Application filed January 5, 1923. Serial No. 610,887.

*To all whom it may concern:*

Be it known that I, CARTER DE MURGUIONDO, a citizen of the United States, and a resident of the city of New York, borough of Brooklyn, in the county of Kings and State of New York, have invented a new and Improved Stocking Purse, of which the following is a full, clear, and exact description.

This invention relates to pocket books or purses and particularly to an improved construction adapted to co-act with a stocking when in use whereby the purse is held in a desired position and against molestation by unauthorized persons.

Another object of the invention is to provide a purse or pocket book adapted to be connected with the top of a stocking, the construction being such that the pocket book must be bent or distorted when applying or removing.

A further object of the invention is to provide a pocket book for a stocking which may be quickly and easily applied and removed by an authorized person without injuring the pocket book or the stocking.

In the accompanying drawing—

Figure 1 is a view partly in perspective showing part of a stocking in place and a purse embodying the invention applied thereto.

Figure 2 is an enlarged elevation of the purse shown in Figure 1.

Figure 3 is a sectional view through Figure 2 approximately on line 3—3.

Figure 4 is a view similar to Figure 3 but showing a modified construction, the stocking being omitted.

Figure 5 is a fragmentary sectional view similar to Figure 4 but showing a further modified construction.

Figure 6 is a view similar to Figure 4 but disclosing a further modified form of the invention.

Referring to the accompanying drawing by numerals, 1 indicates a stocking of any desired kind to which a purse 2 is secured near the upper end 3. The purse may be arranged interiorly of the stocking as shown or exteriorly as preferred and may be quickly applied or removed by the respective fastening elements 4 and 5.

As indicated more particularly in Figures 2 and 3, the fastening elements 4 and 5 are disclosed more or less in detail. From these figures it will be observed that these elements are identical so that the description of one will apply to both. As indicated particularly in Figure 3, a strip of fabric 6 extends from point 7 at the upper end downwardly along the back 8 of the purse 9 for substantially half the height of the purse though this is not essential as merely an appreciable length is desired. At point 10 the strip 6 is folded and is clamped to the back 8 by a rivet 11 which is shown as an eyelet. From the rivet 11 the strip extends through a clip 12 to which the post 13 is rigidly secured whereby said post is held in place. The upwardly extending section 14, as shown in Figure 3, is riveted fast by a suitable rivet 15 which is shown as an eyelet, said rivet extending through both sections of the strip 6 and also through the back 8. This firmly holds the strip in place and also supports the stud or post 13. Near point 7, which is the upper end of the fastening element, is arranged a strip of cloth 16 looped around itself for forming an eye structure 17, said strip 16 and the strip 6 being rigidly clamped to the back 8 by a suitable rivet 18 which is also formed preferably as an eyelet. The eye structure 17 is intended to receive the cross bar 19 of the fastening link 20 which may be any conventional form of hose supporting link now on the market designed to co-act with the post 13, which post is of any desired structure as is commonly used on hose supporters. It will be noted that the post 13 is provided with a head of greater diameter than the restricted portion 21 so that the post must be moved up to the large portion 22 of link 20 or said large portion moved down to the post in order to apply or remove the link 20. In order to accomplish this feat, not only must the strip of cloth or other suitable material 12 be bent but also the purse must be bent or distorted. It will thus be seen that when the parts are in the position shown in Figure 1, in order to remove the purse, it must be bent twice as the elements 4 and 5 are unfastened. This arrangement will result in preventing an unauthorized person from removing the purse surreptitiously.

In Figure 4 a modified construction is shown wherein the strip of cloth 6′ extends from point 7 down to point 10 and entirely back to point 7 where it is looped upon itself so as to make the eye structure 17′. Aside from this variation, the construction is

identical with that shown in Figure 3 so will, therefore, need no additional description.

In Figure 5, the strip 6 or 6′ is eliminated completely and a strip 16″ is riveted directly to the back 8 and the post or stud 13′ is provided with extensions or prongs 23 which are bent over and if desired, clinched in the back 8. In this form as well as in the form shown in Figure 4, the purse must be bent in order to engage or disengage the post with the link 20. The purse 9 may be of any desired construction but is preferably of a simple construction having a back 8 and a bent up front section 24 secured along the side edges by stitching or other means. The back 8 is provided with a top extension 25 which overlaps the front 24 and forms a cover or closing lid.

Figure 6 is a view similar to Figure 4 but disclosing a slightly different construction wherein a single strip 26 of leather, cloth or other material is provided and is bent over at 27 so as to properly receive the eyelet 18. A second or auxiliary eyelet 18′ is provided a short distance from the eyelet 15 so as to enclose the end of the link 20. Below the eyelet 18′ are arranged the respective eyelets 15 and 11 similar to the construction shown in Figure 4 so that no additional description will be necessary. It will also be noted that between the eyelets 11 and 15 the post 13 and associated parts are arranged to properly co-act with the link 20.

What I claim is:—

1. A stocking purse, comprising a purse formed with a flexible body and fastening means therefor, said fastening means comprising a post having an enlarged head connected with the purse at a given point, and a co-acting link pivotally connected with the purse at a distant point, said link having a restricted section and an enlarged section, said enlarged section by reason of the position of the pivotal connection with the purse being arranged at such a distance from the post as to necessitate the folding or bending of the purse to an appreciable extent before the post can be inserted into the restricted portion of the link.

2. A stocking purse, comprising a flexible body and a pair of independent fastening elements connected therewith, each of said elements consisting of a post and a link of the usual hose supporter structure, the link being so positioned in respect to the post as to necessitate the folding of the purse before the link can be attached to the post or detached therefrom.

3. A stocking purse of the character described, comprising a flexible purse body, a post connected with said body at a distance spaced from the upper end, and a link pivotally connected with said body at the upper end, said link co-acting with said post for connecting the body to a stocking, said link being formed with an elongated restricted portion which necessitates the bending of the body of the purse before it can be fitted onto said post.

4. A stocking purse of the character described, comprising a flexible body and a plurality of fastening elements connected thereto, each of said fastening elements comprising a strip of cloth bent at one end, and a loop of cloth arranged to overlap said strip of cloth at the end opposite the bent over end, a link pivotally supported by said loop of cloth, a post supported by said bent over strip of cloth, and eyelets for rigidly securing said strip of cloth and said loop to the back of said purse, said link having a restricted portion fitting over said post, and an enlargement merging into the restricted portion at a point normally spaced from the post whereby the purse must be partially folded to permit the link to be placed over the post or removed therefrom.

CARTER DE MURGUIONDO.
