Title: COMPOSITIONS BASED ON HYPERBRANCHED CONDENSATION POLYMERS AND NOVEL HYPERBRANCHED CONDENSATION POLYMERS

Abstract: The invention relates to personal care, home care and fabric care compositions based on hyperbranched condensation polymers having in the polymer backbone at least one unit comprising an amide bond attached to a trimethylene-aminomethane group and to novel hyperbranched condensation polymers.
Compositions based on hyperbranched condensation polymers and novel hyperbranched condensation polymers

The invention relates to personal care, home care and fabric care compositions based on hyperbranched condensation polymers and to novel hyperbranched condensation polymers. More particularly, the invention relates, in one aspect, to personal care and home care compositions based on hyperbranched condensation polymers having in the polymer backbone at least one unit comprising an amide bond attached to a trismethylene-aminomethane group (hereinafter referred to also as condensation polymers). Specifically, such condensation polymers comprise at least two groups of the general formula (I)

\[
\begin{align*}
\text{O} & \quad \text{C} - \text{A} - \text{C} \quad \text{N} \\
& \quad \text{C} \left[ \text{C} \left( \text{R}^3, \text{R}^4 \right) \right]_\text{m} \quad \text{X}^2 \\
& \quad \text{R}^2 \quad \text{C} - \text{R}^3 \\
& \quad \text{X} \quad \text{m}
\end{align*}
\]

Formula (I)

wherein the free bond extends to the polymer backbone;
A is an, optionally substituted, \((\text{C}_6-\text{C}_{24})\) arylidiradical or an, optionally substituted, \((\text{C}_2-\text{C}_{24})\) (cyclo)alkylidiradical,

\(\text{R}^1\) to \(\text{R}^6\) are, independently of each other, hydrogen, \(\text{C}_{1-20}\) -alkyl, \(\text{C}_{3-7}\) -cycloalkyl or \(\text{C}_{6-10}\) -aryl;
\(\text{X}^1\), \(\text{X}^2\) and \(\text{X}^3\) are, independently of each other, hydrogen, hydroxy, \(\text{C}_{1-20}\) -alkyl, \(\text{C}_{1-20}\)-alkoxy, \(\text{C}_{3-7}\)-cycloalkyl, \(\text{C}_{6-10}\)-aryl or a group \(-\text{O-CO-R}^7\), \(-\text{O-CO-A-CO-N(R}^8,\text{R}^9\)), \(-\text{O-CO-A-CO-OR}^{10}\), or \(-\text{NHet}\);
\(\text{R}^7\) is \(\text{C}_{1-20}\) -alkyl, \(\text{C}_{3-7}\) -cycloalkyl, \(\text{C}_{6-10}\) -aryl, or a radical of a polymer or an oligomer;
\(\text{R}^8\) and \(\text{R}^9\) are, independently of each other, \((\text{C}_{1-20})\) -alkyl or \((\text{C}_{6-10})\) -aryl groups;
or (C_{1-20})-alkyl or (C_{6-10})-aryl groups substituted by a group containing at least one hetero atom or

R^8 and R^9 together with the nitrogen atom to which they are attached form a 5 or 6 membered ring wherein optionally one or several C-atoms are replaced by –

NH, -N-(C_{1-20})-alkyl, -N-aryl, -O- or -S–;

R^{10} is C_{1-20}-alkyl, C_{3-7}-cycloalkyl, or C_{6-10}-aryl or a radical of a polymer or an oligomer;

NHet is, independently of each other, a mono-, bi- or multicyclic nitrogen containing heterocyclic group attached via a nitrogen atom to the polymer which may be aromatic or partly or completely hydrogenated and may contain additional heteroatoms such as nitrogen, oxygen or sulfur and which may optionally be substituted; and

n, m, o are, independently of each other, an integer of 1 to 4, preferably n, m and o are equal to 1.

provided that no more than one of X^1, X^2 and X^3 is hydrogen, C_{1-20}-alkyl, C_{3-7}-cycloalkyl, or C_{6-10}-aryl;

and wherein nitrogen containing groups may be quaternized or protonated.

The condensation polymers as defined above may be used in personal care products and home care products to achieve product characteristics which are typically desired in such products, such as exhibiting low stickiness, lack of powdering or flaking, preferably being clear, transparent and glossy.

Typical personal care and home care products according to the invention are skincare preparations, bath and shower preparations, liquid soaps, bar soaps, preparations containing scents, fragrances and odorant ingredients, hair-care preparations; dentifrice, deodorizing and antiperspirant preparations, decorative preparations, and light protecting preparations.

Of particular interest in context with the present invention are hair care preparations, e.g., conditioners, shampoos, styling gels and mousses, and hair fixing sprays wherein the polymers defined above may find use as conditioning agents, strengthening agents, film forming agents, surfactants, anti-static agents, moisturizers, emulsifiers or hair styling agents. In hair care preparation for example film forming polymers are used e.g. as conditioning agent in order to improve the combability, the shine and the visible appearance of the hair as well as to give the hair antistatic properties.
Personal care products such as hair care preparation should additionally fulfill a variety of requirements in regard of their performance such as providing a fine spray pattern, a good film formation, a good holding power, a high level of style retention, a prolonged curl retention, an improved combability, and should be easy to remove upon washing the hair with shampoo or soap.

The polymers as defined above are suitable for the incorporation into personal care products or home care products possess properties desired for the manufacture of such products, viz., heat stability, good solubility, compatibility with cosmetic bases, pH stability in the range of 4 to 9, processability into a variety of products, compatibility with other ingredients and with the packaging materials, are of neutral color and odor and have a low volatility.

In one embodiment, the compositions of the present invention comprise condensation polymers wherein at least one group of the general formula (I) is present wherein R\textsuperscript{1} to R\textsuperscript{6} are hydrogen.

In another embodiment, the compositions of the present invention comprise condensation polymers wherein one of X\textsuperscript{1}, X\textsuperscript{2} and X\textsuperscript{3} is methyl.

In still another embodiment, the compositions of the present invention comprise condensation polymers wherein at least one of X\textsuperscript{1}, X\textsuperscript{2} and X\textsuperscript{3} is hydroxy, or \(-\text{O-CO-R}^{2}\), or \(-\text{O-CO-A-CO-N}(\text{R}^{6}, \text{R}^{8})\), or \(-\text{O-CO-A-CO-OR}^{10}\), or \(-\text{NHet}\).

In all embodiments of the invention:
the term C\text{6-10} \(-\text{aryl}\) denotes moieties of aromatic hydrocarbons having 6 to 10 carbon atoms, particularly phenyl, tolyl, xylyl, and naphthyl.
the term \((\text{C}_{6-24})\) aryldiaradical denotes a divalent moiety of an aromatic or hydroaromatic hydrocarbon having 6 to 24 carbon atoms, particularly 1,2-phenylene, 1,3-phenylene, 1,4-phenylene, or naphthylene, tetrahydro- or hexahydonaphthylene or norbornene which may be substituted, e.g., by alkyl or alkenyl.
the term C\text{1-20} \(-\text{alkyl}\) denotes straight or branched alkyl groups having up to 20 carbon atoms, particularly methyl, ethyl, propyl, isopropyl, n- butyl, sec-butyl and tert-butyl. The term C\text{3-7} \(-\text{cycloalkyl}\) denotes cycloalkyl groups having 3 to 7 carbon atoms, particularly cyclopropyl, cyclobutyl, cyclopentyl and cyclohexyl. The C\text{1-20} \(-\text{alkyl}\) groups may be saturated or unsaturated.
the term (C$_2$-C$_{24}$) (cyclo)alkyldiracical denotes a divalent moiety of a saturated straight or branched (cyclo)hydrcarbon having 2 to 24 carbon atoms, which may be substituted by C$_1$-C$_{20}$ alkyl or by C$_2$-C$_{20}$ alkenyl.

In all embodiments of the invention A may be saturated or unsaturated. A may optionally be substituted, preferably with a C$_1$-C$_{20}$ alkyl or by C$_2$-C$_{20}$ alkenyl group such as methyl, octenyl, nonenyl, decenyl, undecenyl or dodecenyl. Suitable choices for A are ethylene, propylene, (alkyl-)1,2-ethylene, where the alkyl is defined as above, (methyl-)1,2-ethyldiene, 1,3-propylene, (methyl-)1,2-cyclohexyl, (methyl-)1,2-phenylene, 1,3-phenylene, 1,4-phenylene, 2,3-norbornyl, 2,3-norbornen-5-yl, tetrahydro-1,2-phenylene or (methyl-)1,2-cyclohex-4-enyl radical. Preferably, A is ethylene, propylene or 1,2-cyclohexyl.

R$^7$ can be chosen from, for example, a saturated or unsaturated (C$_1$-C$_{20}$) alkyl or C$_{3-7}$-cycloalkyl, C$_{8-10}$-aryl, a polymer or an oligomer. In all embodiments of the invention R$^7$ is preferably chosen from (C$_1$-C$_{20}$) alkyl groups or a radical of a polymer or an oligomer. Examples of suitable polymers are polyesters, polyethers, poly(caprolactones, polyethyleneoxides, polypropyleneoxide methyl ether, polytetrahydrofuranes, polysilicones or fluoro polymers or oligomers.

R$^7$ can be substituted with for example ester groups, ether groups, amide groups and alcohol groups. The condensation polymer may comprise the same or different R$^7$ groups.

Preferably, the R$^7$ is chosen from phenyl, methyl, ethyl, propyl, isopropyl, n- butyl, sec-butyl, tert-butyl or 2-ethylhexyl or groups derived from natural fatty acids such as sojabean fatty acid, coconut fatty acid or sunflower fatty acid. If R$^7$ is a radical of a polymer or an oligomer it is preferably selected from polyethyleneoxide, polypropyleneoxide or polytetrahydrofurane.

If R$^8$ and R$^9$ are (C$_1$-C$_{20}$) alkyl groups they may be substituted by substituents optionally comprising one or more heteroatoms. More preferably, R$^8$ and R$^9$ are linear C$_2$-, C$_3$- or C$_6$- alkyl groups wherein one or several C-atoms may substituted by substituents optionally comprising nitrogen, oxygen or sulfur.

Thus, R$^8$ and R$^9$ may be substituted by a group selected from the group consisting of alcohol, ether, ester, cyanide, carbonate, urethane, urea, amide, imide, amine, imine or imidazole, oxime, sulfide, thiol, thiourea, sulfone, sulfoxide, sulfate, phosphate, phosphine, phosphinoxide, silane, silicone, silicate, fluoro, chloro, bromo or iodo groups. Examples of such groups -N(R$^8$,R$^9$) are dimethylamino,
diethylamino, dibutylamino, dioctylamino, ethylhexyl-methyl(or ethyl)amino, di-(2-ethyhexyl)amino, distearylamin, diallylamino, dicrotalamino, N-methyl(or ethyl)allylamino, bis(dimethyl(or ethyl)aminopropyl)amino, bis(dimethyl (or ethyl)aminohexyl)amino, bis(dimethyl(or ethyl)aminooctyl)amino, bis(trimethylsilylpropyl)amino, bis(trimethyl(or triethyl)ethoxysilylpropyl)amino, bis(perfluorooctyl)amino, bis(perfluorooctyl-methyl(or ethyl)amino, bis(methoxyethyl)amino, N-methyl(or ethyl)methoxyethylamino, bis(methoxy-2-propyl)amino, bis(maleimidohexyl)amino, bis(octenylsuccinimidopropyl)amino, bis(hexahydrophthalimidohexyl)amino, difurfurylamino, dicyano(m)ethylamino, bis(diphenylphosphinoethyl)amino.

Preferably, R⁸ and R⁹ are di-(C₁-20-alkyl)amino-C₁-20-alkyl groups such as N,N-dimethylaminopropyl.

Examples of groups -N(R⁸,R⁹) wherein R⁸ and R⁹ together form an N-heterocyclic ring are morpholino, thiormorpholino, piperidino, ppyrrolidino, N-methyl piperazino, (2-phenyl)oxazolidino, thiazolidino, piperazino, 2,2,6,6-tetramethylpiperidino, and di(benzyl)amino.

Preferably, the N-heterocyclic ring is an N-methyl piperazine or a morpholino group.

In all embodiments of the invention -OR¹⁰ is derived from a saturated or unsaturated hydroxy functional monomer, oligomer or polymer, wherein R¹⁰ can be aryl, alkyl, cycloalkyl or the radical of polyethyleneoxide, polypropyleneoxide, polytetrahydrofurane, polysilicones, fluoro polymers or a nylon oligomer. Preferably R¹⁰ is an, optionally substituted, (C₁-C₂₅) alkyl group or a radical of polyethyleneoxide. Preferably, the alkyl group is selected from the group of phenyl, methyl, ethyl, propyl, isopropyl, n- butyl, sec-buty, tert-butyl or 2-ethylhexyl or groups derived from natural fatty acids such as sojabeans fatty acid, coconut fatty acid or sunflower fatty acid. If R¹⁰ is a radial of a polymer or an oligomer it is preferably selected from polyethyleneoxide, polypropyleneoxide methyl ether, polypropyleneoxide, polypropyleneoxide methyl ether and/or polytetrahydrofurane in particular from polyethyleneoxide methyl ether, polypropyleneoxide methyl ether and/or polytetrahydrofurane.

Examples of heterocyclic compounds from which the moiety –NHet may be derived are those having a labile hydrogen atom selected from substituted or unsubstituted mono-, bi- or multicyclic heterocycles such as pyrrol, pyrazole, imidazole, pyrazolon, indole, benzimidazole, isatin, oxazolidine, 2-oxazolidone, oxindole, triazole such as 1,2,3-triazole or 1,2,4-triazole, tetrazole, pentazole, pyrazinone, barbituric acid, nucleic acids and such as cytosine, uracil, thymine.
or thiouracil, dioxopiperazine, chinazolindione, purine, xanthin, pterin, cyclic lactames such as gamma-butyrolactam or alpha-piperidone or bicyclic amidines and derivatives thereof. Optionally such heterocyclic compounds may be completely or partly hydrogenated and may be substituted. Suitable substituents, one or several, may be selected independently from the group of alcohol, ether, ester, cyanide, amide, amine, imine, oxime, sulfide, thiol, sulfone, sulfoxide, sulfate, phosphate, phosphine, phosphinoyl, silane, silicone, silicate, fluoro, chloro, bromo or iodo groups or carbonyl groups. Most preferred are, optionally substituted, imidazole, benzimidazole, 1,2,4-triazole and hydantoin.

Condensation polymers comprising at least a group of the general formula (I) as defined earlier wherein X1, X2 and X3 are, independently of each other, a group -O-CO-A-CO-N(R6,R6), -O-CO-A-CO-OR10, or -NHet; and R1 to R6, R7, R9, and NHet are as defined earlier, and wherein nitrogen containing groups may be quaternized, are novel and, as such, are also an object of the present invention.

The condensation polymers used in the compositions of the present invention may have, typically, a weight average molecular mass between 600 g/mol to 50'000 g/mol, more preferably between 800 g/mol and 25'000 g/mol, respectively, a number average molecular mass of about 500 g/mol and 15,000 g/mol, more preferably between 700 g/mol and 4,000 g/mol.

The condensation polymers used in the compositions of the present invention may be prepared by polycondensation of a compound of the general formula (II)

\[
\begin{align*}
\text{H}_2\text{N} & \quad \text{C} \quad \left[ \text{C}\left(\text{R}^3, \text{R}^4\right) \right]_0 \text{X}^{21} \\
\left[ \text{R}^1 \text{C} \text{R}^3 \right]_n & \quad \text{X}^{11} \\
\left[ \text{R}^2 \text{C} \text{R}^9 \right]_m & \quad \text{X}^{31}
\end{align*}
\]

Formula (II)

wherein R1 to R6 and n, m and o are as defined earlier in formula (I) and X11, X21 and X31 have the same meaning as X1, X2 and X3 in formula (I) as defined earlier, provided that at least one of X11, X21 and X31 is hydroxy, and further provided that no more than one of X11, X21 and X31 is hydrogen, C1-20-alkyl, C3-7-cycloalkyl, or
C₆-₁₀ -aryl;

with a dicarboxylic acid of the general formula

\[ \text{A(COOH)}_2 \] (III)

or the cyclic anhydride thereof wherein A has the same meaning as in formula (I)
as defined earlier; and, optionally,
an acid of the general formula

\[ R^7\text{COOH} \] (IV)

and/or a dialkylamine of the general formula

\[ \text{HN(R}^8\text{R}^9) \] (V),

and/or an alcohol of the general formula

\[ R^{10}\text{OH} \] (VI)

and/or a heterocycle of the general formula

\[ \text{H-NHet} \] (VII)

wherein \( R^7, R^8, R^9, R^{10} \) and -Het have the same meaning as in formula (I)
defined earlier,

Optionally, at least one additional alkanolamines according to formula (VIII):

\[
\begin{array}{c}
\text{H} \\
\text{N} \\
\text{C} \\
\text{C} \quad \text{C} - \text{OH} \\
\text{Y} \\
\end{array}
\]

Formula VIII

in which:

\[
\begin{array}{c}
\text{Y} \\
\end{array}
\]

is or a linear, branched or cyclic (C₁-C₂₀) alkyl group;

\( R^{12}, R^{13}, R^{14}, R^{15}, R^{16} \) and \( R^{17} \) are, independently of each other a hydrogen atom,

(C₆-C₁₀) aryl groups, (C₁-C₈) alkyl groups or CH₂OH

and \( p \) and \( q \) are an integer from 1 to 4, preferably, \( p \) and \( q \) are 1

may be added to the polycondensation process in order adjust the degree of branching of the condensation polymer.

Optionally, quaternization or protonation of one or more nitrogen containing groups in the condensation polymer may be performed after the polycondensation reaction.
The reaction can be carried out in a one-step procedure at room temperature or at an elevated temperature, preferably between about 20°C and about 120°C, to form an amide bond between the amino group of the compound of formula (II) and the carboxy group of the dicarboxylic acid or the anhydride thereof after which, at an elevated temperature, preferably between 120°C and 250°C, a polyesteramide is obtained through polycondensation with water being removed, preferably through distillation. The one-step procedure can take place with or without a solvent. Suitable solvents are organic solvents, such as methyl-isobutylketone, butylacetate, toluene or xylene. The removal of water through distillation can take place at either reduced or elevated pressure, such as at a pressure higher than $1.10^5$ Pa, in a vacuum ($< 1.10^5$ Pa) or azeotropically.

Examples of compounds of formula (II) are tris-hydroxymethyl-aminomethane und 2-amino-2-ethyl-1,3-propanediol.

Examples of cyclic anhydrides of dicarboxylic acids of the formula A(COOH)$_2$ are phthalic anhydride, tetrahydrophthalic anhydride, naphtalenic dicarboxylic anhydride, hexahydrophthalic anhydride, 5-norbornene-2,3-dicarboxylic anhydride, norbornene-2,3-dicarboxylic anhydride, succinic anhydride, 2-octene-1-yl-succinic anhydride, 2-nonene-1-yl-succinic anhydride, 2-decene-1-yl-succinic anhydride, 2-undecene-1-yl-succinic anhydride 2-dodecene-1-yl-succinic anhydride, maleic anhydride, (methyl)succinic anhydride, glutaric anhydride, 4-methylphthalic anhydride, 4-methylhexahydrophthalic anhydride, 4-methyltetrahydrophthalic anhydride, maleinised poly-isobutylene, maleinised polybutadiene and the maleinised alkylester of an unsaturated fatty acid.

Examples of carboxylic acids (IV) are monomeric, oligomeric or polymeric monofunctional carboxylic acid. Suitable carboxylic acids are, for example, saturated aliphatic (C$_1$-C$_{20}$) acids, unsaturated (C$_1$-C$_{20}$) fatty acids, aromatic acids and [alpha], [beta]-unsaturated acids or natural fatty acids. Examples of suitable [alpha],[beta]-unsaturated acids are (meth)acrylic acid, crotonic acid and monoesters or monoamides of itaconic acid, maleic acid, 12-hydroxystearic acid, polyether carboxylic acid, and fumaric acid. Suitable saturated aliphatic acids are for example acetic acid, propionic acid, butyric acid, 2-ethyl hexanoic acid, lauric acid and stearic acid. Suitable aromatic acid are for example benzoic acid and tertiary butyl benzoic acid. Examples of natural fatty acids comprises sunflower
fatty acid, coconut fatty acid or sojabeen fatty acid

Examples of dialkylamines (V) of the formula HN(R^kR^q) are dimethylamine, diethylamine, dibutylamine, dioctylamine, ethylhexyl-methyl(or ethyl)amine, di-(2-ethylhexyl)amine, distearylamine, diallylamine, dicrotylamine, N-methyl(or ethyl)allylamine, bis(aminopropyl)amine, bis(aminohexyl)amine, N-methyl(or ethyl)-aminopropyamine, bis(dimethyl(or ethyl)aminopropyl)amine, bis(dimethyl(or ethyl)aminohexyl)amine, bis(dimethyl(or ethyl)aminoethyl)amine, bis(trimethylsilylpropyl)amine, bis(trimethyl(or triethyl)ethoxysilylpropyl)amine, bis(perfluoroctyl)amine, bis(perfluorooctyl-methyl(or ethyl)amine, bis(methoxyethyl)amine, N-methyl(or ethyl)methoxyethylamine, bis(methoxy-2-propyl)amine, bis(maleimidohexyl)amine, bis(octenylsuccinimidopropyl)amine, bis(hexahydrophthalimidohexyl)amine, difururfylamine, dicyano(m)ethylamine, bis(diphenylphosphinoethyl)amine, morpholine, thiormorpholine, piperidine, pyrroldinio, (2-phenyl)oxazolidine, thiazolidine, piperrazine, N-methylpiperazine, oxazolidine, 2,2,6,6,6-tetramethylpiperidine, and dibenzy1amine and derivatives thereof.

Examples of alcohols (VI) are e.g. methanol, ethanol, propanol, butanol, tert-butanol, 2-ethylhexanol, fatty alcohols such as cetearyl alcohol, cetyl alcohol, stearyl alcohol, Polychol 5 and hydroxy functional polymers like polyethyleneoxide, polypropyleneoxide, polytetrahydrofurane, polysilicones, fluoro polymers or a nylon oligomer. Preferably polyethyleneoxide monomethylether.

Examples of heterocyclic compounds of formula (VII) above are those particularly disclosed above as providing the moiety –NHet.

Examples of alkanolamines of formula VIII are monoalkanolamines or dialkanolamines. Examples of suitable mono-β-alkanolamines include ethanolamine, 1-(m)ethyl ethanolamine, n-butyl ethanolamine, 1-(m)ethyl isopropanolamine, isobutanolamine, β-cyclohexanolamine, n-butyl isopropanolamine and n-propanolamine.

Examples of suitable di-β-alkanolamines are diethanolamine, 3-amino-1,2-propanediol, 2-amino-1,3-propanediol, diisobutanolamine (bis-2-hydroxy-1-butyl)amine, di-β-cyclohexanolamine and diisopropanolamine (bis-2-hydroxy-1-propyl)amine).
In addition to hydroxy, -O-CO-R², -O-CO-A-CO-N(R³,R³), or -O-CO-A-CO-OR¹⁰, or -NH₆t end-groups the polymer may also contain carboxyl groups and/ or β-hydroxyalkylamide groups. Carboxyl groups can be present in, for example, amounts of between 0.01 and 2.0 mg equivalent/ gram of polymer. β-Hydroxyalkylamide groups may be present in amounts of between 0.01 and 5.0 mg equivalent/ gram polymer. The amount of β-hydroxyalkylamide groups can be controlled via the ratio of the compound of formula (II) and optionally formula (VIII) and the reactants of formula (III), (IV), (V), (VI) and (VII) and via the degree of conversion. If hydroxy groups are present in the condensation polymer they may in a subsequent step react with compounds containing one or more groups that can react with hydroxyl groups, such as for example carboxylic acids, carboxylic anhydrides, isocyanates, activated esters or carboxylic halides leading to entirely or partly modified polymers.

Thus the invention also relates to entirely or partly modified polymers. The modification can for example take place via a reaction between the condensation polymer comprising a group of formula (I) wherein at least one X¹, X² and/ or X³ is a hydroxy group with a monomer, oligomer or polymer containing reactive groups. Examples of suitable reactive groups include carboxyl groups, carboxylic esters, carboxylic anhydrides, epoxy groups, alkoxyisilane groups, isocyanate groups, acid chloride groups, epoxychlorohydrine groups, amine groups, phenolic groups, methylolated amide groups and combinations thereof. Preferably the monomer, oligomer or polymer contains only one group that can react with hydroxyl group, as a result of which no crosslinking takes place during the modification.

The degree of branching and the functionality of the polymer are dependent on the starting materials and the molecular weight of the polymer. A molecular weight higher than 2,000 and the use of di- and/ or trialkanolamines generally lead to highly branched structures with a functionality of ≥ 6.

Preferably, the average number of end groups X¹, X² and/ or X³ per molecule of condensation polymer is between 2 and 250, more preferably between 3 and 50.

The optionally one or several nitrogen atoms of the condensation polymer which are present in quaternized or protonated forms may be prepared by reaction of the nitrogen atoms of the non-quaternized condensation polymer with customary quaternizing or protonating agents according to standard procedures as e.g.

Suitable quaternization reagents are e.g. alkyl or aryl halides such as Me iodide, Me chloride, ethyl iodide, phenyl iodide, allyl chloride, vinyl chloride; sulfates such as dimethylsulfate, diethylsulfate; glycidyl ethers and esters such as allyl glycidyl ester and glycidyl methacrylate without being limited thereto. Suitable quaternization agents to obtain the betaine group are chloro acetic acid and (meth-)acrylic acid. The quaternization procedure can take place with or without a solvent. Suitable solvents are water or an organic solvent, such as e.g. acetonitrile. The quaternized condensation polymer can be used as solution in the respective solvent or the solvent can be evaporated to yield a dried condensation polymer.

Preferably, the nitrogen atoms are quaternized with methyl and/ or ethyl groups.

Suitable protonation agents are e.g. inorganic acids such as HCl; H₃PO₄; H₂SO₄ and other cosmetically acceptable acids like acetic acid, tartaric acid, fumaric acid, lactic acid, malic acid, succinic acid, and mixtures thereof. Preferably, the acid is selected from the group consisting of acetic acid, tartaric acid, hydrochloric acid, fumaric acid, and mixtures thereof; The protonation procedure can take place with or without a solvent. Suitable solvents are water or an organic solvent, such as e.g. acetonitrile. The protonated condensation polymer can be used as solution in the respective solvent or the solvent can be evaporated to yield a dried condensation polymer.

Dependent on the desired degree of the quaternization, respectively protonation, the amount of quaternization or protonation agent to nitrogen atoms has to be adjusted accordingly.

The preferred degree of quaternization, respectively protonation, of the nitrogen atoms of the condensation polymer is between 20 and 100%, more preferred between 50 and 100%, most preferred 80 and 100%.

Another embodiment of the invention is a personal care product or household product comprising an effective amount of a condensation polymer.
The term "effective amount" means generally at least a concentration of 0.01% by weight based on the total formulation. Preferably, a concentration of 0.01 to 20 wt. %, most preferred of 0.05 to 10 wt. % is used.

In a further embodiment the invention relates to a personal care product comprising a condensation polymer as outlined above and additional cosmetic or dermatological adjuvants and/or additives.

Preferably, the personal care product according to the invention is selected from skin-care preparations; bath and shower preparations; liquid soaps; bar soaps; preparations containing scents, fragrances and odorant ingredients; hair-care preparations; dentifrices; deodorizing and antiperspirant preparations; decorative preparations; light protecting preparations and preparations containing active ingredients.

Preferred personal care products according to the invention are hair care preparations comprising additional additives and adjuvants used in hair care.

In a further embodiment the invention relates to a method of treating hair in which a personal care product such as a hair care preparation is applied to the hair.

In another embodiment the invention relates to the use of a condensation polymer as defined above as conditioning agent, strengthening agent, film forming agent, surfactant, anti-static agent, moisturizer, emulsifier or hair styling agent.

The personal care products according to the invention comprise additional cosmetic or dermatological adjuvants and/or additives (cosmetic carrier) which are preferable selected from

1.) Water
2.) Water soluble organic solvents, preferably C₁-C₆-Alkanols
3.) Oils, fatty substances, waxes
4.) Various esters different to 3) of C₆-C₃₀ monocarboxylic acids with one-, two, or three valent alcohols
5.) Saturated acyclic and cyclic hydrocarbons
6.) Fatty acids
7.) Fatty alcohols
8.) Silicone oils
and mixtures thereof.

The personal care products or household products according to the invention can
contain further adjuvants and additives such as preservatives/ antioxidants, fatty
substances/oils, water, organic solvents, silicones, thickeners, softeners,
emulsifiers, additional screening agents, antifoaming agents, moisturizers,
fragrances, surfactants, fillers, sequestering agents, anionic, cationic, nonionic or
amphoteric polymers or mixtures thereof, propellants, acidifying or basifying
agents, dyes, colorants, pigments or nanopigments, light stabilizers, insect
repellants, skin tanning agents, skin whitening agents, antibacterial agents,
preservatives or any other ingredients usually formulated into cosmetics. The
necessary amounts of the cosmetic and dermatological adjuvants and additives
can, based on the desired product, easily be chosen by a skilled artisan in this
field and will be illustrated in the examples, without being limited hereto.

Light screening agents
Additional screening agents are advantageously selected from UV-A, UV-B, UV-C
and/or broadband filters. Examples of UV-B or broad spectrum screening agents,
i.e. substances having absorption maximums between about 290 nm and 340 nm
may be organic or inorganic compounds. Organic UV-B or broadband screening
agents are e.g. acrylates such as 2-ethylhexyl 2-cyano-3,3-diphenylacrylate
(octocrylene, PARSOL® 340), ethyl 2-cyano-3,3-diphenylacrylate and the like;
camphor derivatives such as 4-methyl benzylidene camphor (PARSOL® 5000), 3-
benzylidene camphor, camphor benzalkonium methosulfate,
polyacrylamidomethyl benzylidene camphor, sulfo benzylidene camphor,
sulphomethyl benzylidene camphor, therephthalidene dicamphor sulfonic acid and
the like; cinnamate derivatives such as ethylhexyl methoxy cinnamate (PARSOL®
MCX), ethoxyethyl methoxy cinnamate, diethanolamine methoxy cinnamate
(PARSOL® Hydro), isoamyl methoxy cinnamate and the like as well as cinnamic
acid derivatives bond to siloxanes; p-aminobenzoic acid derivatives, such as p-
aminobenzoic acid, 2-ethylhexyl p-dimethylaminobenzoate, N-oxypropylenated
ethyl p-aminobenzoate, glyceryl p-aminobenzoate; benzophenones such as
benzophenone-3, benzophenone-4, 2,2',4,4'-tetrahydroxy-benzophenone, 2,2'-
dihydroxy-4,4'-dimethoxy benzophenone and the like; esters of benzalmalonic acid
such as di-(2-ethylhexyl) 4-methoxy benzalmalonate; esters of 2-(4-ethoxy-
anilinomethylene) propandioic acid such as 2-(4-ethoxy anilinomethylene)
propandioic acid diethyl ester as described in the European Patent Publication EP 0895 776; organosiloxane compounds containing benzalmonate groups as described in the European Patent Publications EP 0358584 B1, EP 0538431 B1 and EP 0709080 A1 such as PARSOL® SLX; drometrizole trisiloxane (Mexoryl XL); imidazole derivatives such as e.g. 2-phenyl benzimidazole sulfonic acid and its salts (PARSOL® HS). Salts of 2-phenyl benzimidazole sulfonic acid are e.g. alkali salts such as sodium- or potassium salts, ammonium salts, morpholine salts, salts of primary, sec. and tert. amines like monoethanolamine salts, diethanolamine salts and the like; salicylate derivatives such as isopropylbenzyl salicylate, benzyl salicylate, butyl salicylate, ethylhexyl salicylate (PARSOL® EHS, Neo Heliopan OS), isoocyl salicylate or homomenthyl salicylate (homosalate, PARSOL® HMS, Neo Heliopan HMS) and the like; triazine derivatives such as ethylhexyl triazone (Uvinul T-150), diethylhexyl butamido triazone (Uvasorb HEB) and the like. Encapsulated UV-filters such as encapsulated ethylhexyl methoxycinnamate (Eusolex UV-pearls) or microcapsules loaded with UV-filters as e.g. dislosed in EP 1471995 and the like; Inorganic compounds are pigments such as microparticulated TiO₂, and the like. The term "microparticulated" refers to a particle size from about 5 nm to about 200 nm, particularly from about 15 nm to about 100 nm. The TiO₂ particles may also be coated by metal oxides such as e.g. aluminum or zirconium oxides or by organic coatings such as e.g. polyols, methicone, aluminum stearate, alkyl silane. Such coatings are well known in the art.

Examples of broad spectrum or UV A screening agents i.e. substances having absorption maximums between about 320 nm and 400 nm may be organic or inorganic compounds e.g. dibenzoylmethane derivatives such as 4-tert.-butyl-4'-methoxydibenzoylmethane (PARSOL® 1789), dimethoxydibenzoylmethane, isopropyldibenzoylmethane and the like; benzotriazole derivatives such as 2,2'-methylene-bis-(6-(2H-benzotriazole-2-yl)-4-(1,1,3,3,-tetramethylbutyl)-phenol (Tinosorb M) and the like; bis-ethylhexyloxyphenol methoxyphenyl triazine (Tinosorb S) and the like; phenylene-1,4-bis-benzimidazolesulfonic acids or salts such as 2,2-(1,4-phenylene)bis-(1H-benzimidazole-4,6-disulfonic acid) (Neoheliopan AP); amino substituted hydroxybenzphenones such as 2-(4-diethylamino-2-hydroxy-benzoyl)-benzoic acid hexylester (Uvinul A plus) as described in the European Patent Publication EP 1046391; ionic UV-A filters as described in the International Patent Publication WO2005080341 A1; pigments such as microparticulated ZnO or TiO₂ and the like. The term "microparticulated" refers to a particle size from about 5 nm to about 200 nm, particularly from about
15 nm to about 100 nm. The particles may also be coated by other metal oxides such as e.g. aluminum or zirconium oxides or by organic coatings such as e.g. polyols, methicone, aluminum stearate, alkyl silane. Such coatings are well known in the art.

As dibenzoylmethane derivatives have limited photostability it may be desirable to photostabilize these UV-A screening agents. Thus, the term "conventional UV-A screening agent" also refers to dibenzoylmethane derivatives such as e.g. PARSOL® 1789 stabilized by, e.g. 3,3-diphenylacrylate derivatives as described in the European Patent Publications EP 0 514 491 B1 and EP 0 780 119 A1; benzylidene camphor derivatives as described in the US Patent No. 5,605,680; organosiloxanes containing benzaldehyde groups as described in the European Patent Publications EP 0358584 B1, EP 0538431 B1 and EP 0709080 A1.

Antioxidants

Based on the invention all known antioxidants usually formulated into personal care and household products can be used. Especially preferred are antioxidants chosen from the group consisting of amino acids (e.g. glycine, histidine, tyrosine, tryptophan) and their derivatives, imidazole (e.g. urocanic acid) and derivatives, peptides such as D,L-carnosine, D-carnosine, L-carnosine and derivatives (e.g. anserine), carotenoids, carotenes (e.g. α-carotene, β-carotene, lycopene) and derivatives, chlorogenic acid and derivatives, lipoic acid and derivatives (e.g. dihydrolipoic acid), aurothioglucose, propylthiouracil and other thiols (e.g. thioredoxine, glutathione, cysteine, cystine, cystamine and its glycosyl-, N-acetyl-, methyl-, ethyl-, propyl-, amyl-, butyl- and lauryl-, palmitoyl-; oleyl-, y-linoleyl-, cholesteryl- and glycerylester) and the salts thereof, diacetylthioacetone, diethyldithiopropionate, thiophosphonic acid and its derivatives (ester, ether, peptides, lipids, nucleotides, nucleosides and salts) as well as sulfoximine compounds (such as bithioninsulfoximine, homocysteinesulfoximine, bithioninsulfone, penta-, hexa-, heptahydroxysulfoximine) in very low compatible doses (e.g. pmol bis μmol/ kg), additionally (metal)-chelators (such as α-hydroxyfatty acids, palmitic-, phytinic acid, lactoferrin), β-hydroxyacids (such as citric acid, lactic acid, malic acid), huminic acid, gallic acid, gallic extracts, bilirubin, biliverdin, EDTA, EGTA and its derivatives, unsaturated fatty acids and their derivatives (such as γ-linoleic acid, linolic acid, oleic acid), folic acid and its derivatives, ubiquinone and ubiquinol and their derivatives, vitamin C and derivatives (such as ascorbylpalmitate and ascorbyltetraisopalmitate, Mg-ascorbylphosphate, Na-ascorbylphosphate,
ascorbyl-acetate), tocopherol and derivates (such as vitamin-E-acetate),
mixtures of nat. vitamin E, vitamin A and derivates (vitamin-A-palmitate and -
acetate) as well as coniferylbenzoate, rutinic acid and derivatives, α-
glycosylrutin, ferulic acid, furfurylidene glucoit, carnosine, butylhydroxytoluene,
butilhydroxyanisole, trihydroxybutyrophenone, urea and its derivatives,
mannose and derivates, zinc and derivates (e.g. ZnO, ZnSO₄), selen and
derivatives (e.g. selenomethionin), stilbenes and derivatives (such as
stilbenoxide, trans-stilbenoxide) and suitable derivates (salts, esters, ethers,
sugars, nucleotides, nucleosides, peptides and lipids) of the named active
ingredients. One or more preservatives/ antioxidants may be present in an
amount of at least 0.01 wt. % of the total weight of the composition. Preferably
about 0.01 wt. % to about 10 wt. % of the total weight of the composition of the
present invention is present. Most preferred, one or more preservatives/
antioxidants are present in an amount about 0.1 wt. % to about 1 wt. %.

Surface active ingredients
Typically personal care products or household products also contain surface
active ingredients like emulsifiers, solubilizers and the like. An emulsifier enables
two or more immiscible components to be combined homogeneously. Moreover,
the emulsifier acts to stabilize the composition. Emulsifiers that may be used in
the present invention in order to form O/W, W/O, O/W/O or W/O/W emulsions/
microemulsions include sorbitan olate, sorbitan sesquioleate, sorbitan
isostearate, sorbitan trioleate, polyglyceryl-3-diisostearate, polyglycerol esters of
oleic/ isostearic acid, polyglyceryl-6 hexaricinolate, polyglyceryl-4-oleate,
polyglycerol-4 olete/ PEG-8 propylene glycol cocoate, oleamide DEA, TEA
myristate, TEA stearate, magnesium stearate, sodium stearate, potassium
laurate, potassium ricinoleate, sodium cocoate, sodium tallowate, potassium
castorale, sodium oleate, and mixtures thereof. Further exemplary emulsifiers
are phosphate esters and the salts thereof such as cetyl phosphate (Amphisol®
A), diethanolamine cetyl phosphate (Amphisol®), potassium cetyl phosphate
(Amphisol® K), sodium glyceryl olate phosphate, hydrogenated vegetable
glycerides phosphate and mixtures thereof. Furthermore, one or more synthetic
polymers may be used as an emulsifier. For example, PVP eicosene copolymer,
acrylates/ C₁₀-₃₀ alkyl acrylate crosspolymer, acrylates/ steareth-20 methacrylate
copolymer, PEG-22/ dodecyl glycol copolymer, PEG-45/ dodecyl glycol
copolymer, and mixtures thereof. Further exemplary emulsifiers are fatty
alcohols, e.g. cetearyl alcohol (Lanette O, Cognis Cooperation), cetyl alcohol
(Lanette 16, Cognis Cooperation), stearyl alcohol (Lanette 18, Cognis Cooperation), Laneth-5 (Polychol 5, Croda Chemicals), furthermore sucrose and glucose derivatives, e.g. sucrose distearate (Crodesta F-10, Croda Chemicals), Methyl glucose isostearate (Isolan IS, Degussa Care Chemicals), furthermore ethoxylated carboxylic acids or polyethylene glycol esters and polyethylene glycol ethers, e.g. steareth-2 (Brij 72, Uniqema), steareth-21 (Brij 721, Uniqema), ceteareth-25 (Cremophor A25, BASF Cooperation), PEG-40 hydrogenated castor oil (Cremophor RH-40, BASF Cooperation), PEG-7 hydrogenated castor oil (Cremophor WO7, BASF Cooperation), PEG-30 Dipolyhydroxystearate (Arlacel P 135, Uniqema), furthermore glyceryl esters and polyglyceryl esters, e.g. polyglyceryl-3-diisostearate (Hostacerin TGI, Clariant Cooperation), polyglyceryl-2 dipolyhydroxystearate (Dehymuls PGPH, Cognis Cooperation), polyglyceryl-3 methylglucose distearate (Tego Care 450, Degussa Care Chemicals). The preferred emulsifiers are cetyl phosphate (Amphisol® A), diethanolamine cetyl phosphate (Amphisol®), potassium cetyl phosphate (Amphisol® K), PVP Eicosene copolymer, acrylates/ C_{10-30}-alkyl acrylate crosspolymer, PEG-20 sorbitan isostearate, sorbitan isostearate, and mixtures thereof. The one or more emulsifiers are present in a total amount of at least 0.01 wt. % of the total weight of the composition. Preferably about 0.01 wt. % to about 20 wt. % of the total weight of the composition of the present invention is used. Most preferred, about 0.1 wt. % to about 10 wt. % of emulsifiers are used. Typically personal care products or household products also contain anionic, neutral, amphoteric or cationic tensides.

Exemplary anionic tensides comprise alkyl sulfate, alkylethersulfate, alkylsulfonate, alkylarylsulfonate, alkylsuccinate, alkylsulfosuccinate, N-alkoysarkosinate, acyltaurate, acylisethionate, alkylphosphate, alkyletherphosphate, alkylethercarboxylate, alpha-olefinesulfonate, especially the alkali-und earth alkali salts, e.g. sodium, potassium, magnesium, calcium, as well as ammonium- and triethanol amine-salts. The alkylethersulfate, alkyletherphosphate and alkylethercarboxylate may comprise between 1 to 10 ethyleneoxide or propyleneoxide units, preferably 1 to 3 ethyleneoxide-units per molecule.

Suitable are e.g. sodium laurylsulfate, ammonium lauryl sulfate, sodium laurylethersulfate, ammonium laurylethersulfate, sodium lauroylsarkonisate, sodiumoleylsuccinate, ammonium laurysulfosuccinate, sodium dodecybenzolsulfonate, triethanolamidododecybenzolsulfonate.

Suitable amphoteric tensides are e.g. alkylbetaine, alkylamidopropylbetaine,
alkylsulfobetaine, alkylglycinate, alkylcarboxyglycinate, alkylamphoacetate or propionate, alkylamphodiacetate or dipropionate such as cocodimethylsulfopropylbetaine, laurylbetaine, cocamidopropylbetaine or sodium cocamphopropionate.

Examples of non ionic tensides are e.g. reaction products of aliphatic alcohols or alkylphenols with 6 to 20 C-Atoms of a linear or branched alkyl chain with ethyleneoxide and/or propyleneoxide. The amount of ethyleneoxide is about 6 to 60 mole to one mol alcohol. Furthermore alkylaminoxe, mono- or dialkylalkanolamide, fatty esters of polyethylene glycols, alkylpolyglycosides or sorbitanether ester are suitable for the incorporation of hair care compositions according to the invention.

Furthermore, the personal care products or household products may contain the usual cationic tensides such as quaternised ammonium compounds e.g. cetyltrimethylammoniumchloride or bromide (INCI: cetrimoniumchloride or bromide), hydroxyethylcetyldimonium phosphate (INCI: Quaternium-44), Luviquat® Mono LS (INCI: Cocotrimoniummethosulfate), poly(oxy-1,2-Ethandiyl), (Octadecynitrilo) tri-2, 1-Ethandiyl) tris-(hydroxy)-phosphate (INCI Quaternium-52). For special effects typical conditioning agents may be combined with the condensation polymers within personal care products or household products, especially within hair care preparations such as the previously mentioned cationic polymers named polyquaternium (INCI), especially copolymers of vinylpyrrolidone/N-vinylimidazoliumsalts (Luviquat® FC, Luviquat® HM, Luviquat® MS, Luviquat® Ultracare), copolymers of N-vinylpyrrolidone/dimethylaminoethylmethacrylate quaternised with diethylsulfate (Luviquat® PQ 11), copolymers of N-ctionic cellulose derivatives (Polyquaternium-4 and-10), acrylamidcopolymers (Polyquaternium-7). Furthermore protein hydrolysates may be used as well as conditioning agents on silicone basis such as polyarylsiloxane, polyarylamylsiloxane, polyethersiloxane or silicone resins. Other suitable silicone compounds are dimethicondopolyole (CTFA) and amino functionalised silicone derivatives such as amodimethicone (CTFA).

Furthermore cationic guar derivatives such as guarhydroxypropyltrimoniumchloride (INCI) may be used.

The one or more anionic, neutral, amphoteric or cationic tensides are present in a total amount of at least 0.01 wt. % of the total weight of the composition. Preferably about 0.01 wt. % to about 20 wt. % of the total weight of the composition of the present invention is used. Most preferred, about 0.1 wt. % to about 10 wt. % of one or more tensides are used.
Oil and fatty components
The lipid phase can advantageously be chosen from mineral oils and mineral waxes; oils such as triglycerides of caprinic acid and/or caprylic acid or castor oil; oils or waxes and other natural or synthetic oils, in an preferred embodiment esters of fatty acids with alcohols e.g. isopropanol, propylene glycol, glycerin or esters of fatty alcohols with carbonic acids or fatty acids; alkylbenzoates; and/or silicone oils.
Exemplary fatty substances which can be incorporated in the oil phase of the emulsion, microemulsion, oleo gel, hydrodispersion or lipodispersion of the present invention are advantageously chosen from esters of saturated and/or unsaturated, linear or branched alkyl carboxylic acids with 3 to 30 carbon atoms, and saturated and/or unsaturated, linear and/or branched alcohols with 3 to 30 carbon atoms as well as esters of aromatic carboxylic acids and of saturated and/or unsaturated, linear or branched alcohols of 3-30 carbon atoms. Such esters can advantageously be selected from octyl palmitate, octyl cocoate, octylisostearate, octyldodecylmyristate, cetearylisononanoate, isopropyl myristate, isopropyl palmitate, isopropyl stearate, isopropyl oleate, n-butyl stearate, n-hexyl laurate, n-decyl oleate, isoctyl stearate, isononyl stearate, isononylisononanoate, 2-ethyl hexyl palmitate, 2-ethylhexyl laurate, 2-hexyldecyl stearate, 2-octyldodecyl palmitate, stearyl heptanoate, oleyl oleate, oleyl erucate, erucyl oleate, erucyl erucate, tridecyl stearate, tridecyl trimellitate, as well as synthetic, half-synthetic or natural mixtures of such esters e.g. jojoba oil.
Other fatty components suitable for personal care products or household products of the present invention include polar oils such as lecithins and fatty acid triglycerides, namely triglycerol esters of saturated and/or unsaturated, straight or branched carboxylic acid with 8 to 24 carbon atoms, preferably of 12 to 18 carbon atoms whereas the fatty acid triglycerides are preferably chosen from synthetic, half synthetic or natural oils (e.g. cocoglyceride, olive oil, sunflower oil, soybean oil, peanut oil, rape seed oil, sweet almond oil, palm oil, coconut oil, castor oil, hydrogenated castor oil, wheat oil, grape seed oil, macadamia nut oil and others); apolar oils such as linear and/or branched hydrocarbons and waxes e.g. mineral oils, vaseline (petrolatum); paraffins, squalane and squalene, polyolefines, hydrogenated polyisobutene and isohexadecanes, favored polyolefines are polydecenes; dialkyl ethers such as dicaprylyl ether; linear or cyclic silicone oils such as preferably cyclomethicone
(octamethylcyclotetrasiloxane; cetyltrimethylammonium, hexamethyldicyclosiloxane, polymethylsiloxane, poly(methylphenylsiloxane) and mixtures thereof.

Other fatty components which can advantageously be incorporated in personal care products or household products of the present invention are isoeikosanes; neopentylglycoldiheptanoate; propyleneglycoldicaprylate/ dicaprate; caprylic/ capric/ diglycerol succinate; butyleneglycol caprylate/ caprate; C_{12}^{-13}-alkyllactate; di-
C_{12}^{-13}-alkyltartrate; triisostearin; dipentaerythrityl hexacaprylate/ hexacaprate; propyleneglycol monoisoestearate; tricaprylin; dimethylisosorbide. Especially beneficial is the use of mixtures C_{12-15}-alkylbenzoate and 2-ethylhexylisostearate, mixtures C_{12-15}-alkylbenzoate and isotridecylisononanoate as well as mixtures of C_{12-15}-alkylbenzoate, 2-ethylhexylisostearate and isotridecylisononanoate.

The oily phase of the formulation of the present invention can also contain natural vegetable or animal waxes such as bee wax, china wax, bumblebee wax and other waxes of insects as well as shea butter and cocoa butter.

Silicone oils

Suitable silicone oils are e.g. such as dimethylpolysiloxane, diethylpolysiloxane, diphenylpolysiloxane, cyclic siloxanes, poly(methylphenylsiloxanes) as well as amino-, fatty acid-, alcohol-, polyether-, epoxy-, fluoro-, glycoside-, and/ or alkyl modified silicone compounds which are liquid or solid at room temperature and mixtures thereof. The number average molecular weight of the dimethicones and poly(methylphenylsiloxanes) is preferably in the range of 100 to 150000 g/mol. Preferred cyclic siloxanes comprise 4- to 8-membered rings which are for example commercially available as cyclomethicones.

An oil or fatty component is present in an amount of about 1 wt. % to about 50 wt. % of the total weight of the product. The preferred amount of an oil or fatty component is about 2 wt. % to about 25 wt. %, and most preferably about 3 wt. % to about 20 wt. %.

Moisturizing agents

A moisturizing agent may be incorporated into a product of the present invention to maintain hydration or rehydrate the skin. Moisturizers that prevent water from evaporating from the skin by providing a protective coating are called emollients. Additionally an emollient provides a softening or soothing effect on the skin surface and is generally considered safe for topical use. Preferred emollients
include mineral oils, lanolin, petrolatum, capric/ caprylic triglycerides, cholesterol, silicones such as dimethicone, cyclomethicone, almond oil, jojoba oil, avocado oil, castor oil, sesame oil, sunflower oil, coconut oil and grape seed oil, cocoa butter, olive oil, aloe extracts, fatty acids such as oleic and stearic, fatty alcohols such as cetyl and hexadecyl (ENJAY), diisopropyl adipate, hydroxybenzoate esters, benzoic acid esters of C₉₋₁₅-alcohols, isononyl isononanoate, ethers such as polyoxypropylene butyl ethers and polyoxypropylene cetyl ethers, and C₁₂₋₁₅-alkyl benzoates, and mixtures thereof. The most preferred emollients are hydroxybenzoate esters, aloe vera, C₁₂₋₁₅-alkyl benzoates, and mixtures thereof. An emollient is present in an amount of about 1 wt. % to about 50 wt. % of the total weight of the product. The preferred amount of emollient is about 2 wt. % to about 25 wt. %, and most preferably about 3 wt. % to about 15 wt. %.

Moisturizers that bind water, thereby retaining it on the skin surface are called humectants. Examples of humectants which can be incorporated into a product of the present invention are glycerin, propylene glycol, polypropylene glycol, polyethylene glycol, lactic acid, sodium lactate, pyrrolidone carboxylic acid, urea, phospholipids, collagen, elastin, ceramides, lecithin, sorbitol, PEG-4, and mixtures thereof. Additional suitable moisturizers are polymeric moisturizers of the family of water soluble and/ or swellable/ and/ or with water gelating polysaccharides such as hyaluronic acid, chitosan and/ or a fructose rich polysaccharide which is e.g. available as Fucogel®1000 (CAS-Nr. 178463-23-5) by SOLABIA S. One or more humectants are optionally present at about 0.5 wt. % to about 8 wt. % in a product of the present invention, preferably about 1 wt. % to about 5 wt. %.

The aqueous phase of the products of the present invention can contain the usual cosmetic additives such as alcohols, especially lower alcohols, preferably ethanol and/ or isopropanol, low diols or polyols and their ethers, preferably propylene glycol, glycerin, ethylene glycol, ethyleneglycol monoethyl- or monobutylether, propylene glycol monomethyl- or -monoethyl- or monobutylether, diethyleneglycol monomethyl-or monoethylether and analogue products, polymers, foam stabilizers; electrolytes and especially one or more thickeners.

**Thickeners**

Thickeners that may be used in formulations of the present invention to assist in making the consistency of a product suitable include carbomer, siliciumdioxide,
magnesium and/or aluminum silicates, lipid thickeners, e.g. cetyl alcohol, cetyl palmitate (Cutina CP, Cognis Cooperation), glyceryl myristate (Estol 3650, Uniqema), microcrystalline wax (A&E Connock), myristyl alcohol (Lanette 14, Cognis Cooperation), myristyl lactate (Crodamol ML, Croda Chemicals), beeswax (A&E Connock), stearic acid (Lipo Chemicals), stearyl alcohol (Lanette 18, Cognis Cooperation), polysaccharides and their derivatives such as xanthan gum (Keltrol, CP Kelco), hydroxypropyl cellulose (Klucel, Hercules Incorporated), Hydroxyethylcellulose (Tylose H, Clariant Corporation), polyacrylamides, selfemulsifying polyacrylamide, e.g. Salcare SC 91, Salcare SC 96 (Ciba Specialty Chemicals), Sepigel 305 (Seppic), acrylate crosspolymers, preferably a carboxomer, such as Carbopol® of type 980, 981, 1382, 2984, 5984, ETD 2001, ETD 2050, Ultrez 10, Ultrez 21 (Noveon Inc.), alone or mixtures thereof. Thickeners can be present in an amount of about 0.01 wt. % to about 8 wt. % in the product of the present invention, preferably, 0.05 wt. % to about 5 wt. %.

Neutralizing agents

Examples of neutralizing agents which may be included in the product of the present invention to neutralize components such as e.g. an emulsifier or a foam builder/stabilizer include but are not limited to alkali hydroxides such as a sodium and potassium hydroxide; organic bases such as diethanolamine (DEA), triethanolamine (TEA), aminomethyl propanol, and mixtures thereof; amino acids such as arginine and lysine and any combination of any foregoing. The neutralizing agent can be present in an amount of about 0.01 wt. % to about 8 wt. % in the product of the present invention, preferably, 1 wt. % to about 5 wt. %.

Electrolytes

The addition of electrolytes into the product of the present invention may be necessary to change the behavior of a hydrophobic emulsifier. Thus, the emulsions/microemulsions of this invention may contain preferably electrolytes of one or several salts including anions such as chloride, sulfate, carbonate, borate and aluminate, without being limited thereto. Other suitable electrolytes can be on the basis of organic anions such as, but not limited to, lactate, acetate, benzoate, propionate, tartrate and citrate. As cations preferably ammonium, alkylammonium, alkali- or alkaline earth metals, magnesium-, iron- or zinc-ions are selected. Especially preferred salts are potassium and sodium chloride, magnesium sulfate, zinc sulfate and mixtures thereof. Electrolytes can
be present in an amount of about 0.01 wt. % to about 8 wt. % in the product of the present invention.

**Light stabilizers**

The addition of further light stabilizers may be desirable. Such light stabilizers are e.g. known as sterically hindered amine light stabilizer (HALS) which can be of monomeric or polymeric nature. They are for example selected from the group consisting of N,N'-bisformyl-N,N'-bis-(2,2,6,6-tetramethyl-4-piperidinyl)-hexamethylenediamine (Uvinul 4050 H), bis-(2,2,6,6-tetramethyl-4-piperidyl) sebacate (Uvinul 4077 H), bis-(1,2,2,6,6-pentamethyl-4-piperidyl)-sebacate + methyl-(1,2,2,6,6-pentamethyl-4-piperidyl) sebacate. (Uvinol 4092 H), bis-(2,2,6,6-tetramethylpiperidine-4-yl)-sebacate, bis-(2,2,6,6-tetramethylpiperidine-4-yl) succinate, bis-(1,2,2,6,6-pentamethylpiperidine-4-yl) sebacate, n-butyl-3, 5-di-tert-butyl-4-hydroxybenzyl-malonic acid bis-(1,2,2,6,6-pentamethylpiperidyl) ester, the condensate of 1-hydroxyethyl-2,2,6,6-tetramethyl-4-hydroxypiperidin and succinic acid, the condensate of N,N'-bis-(2,2,6,6-tetramethyl-4-piperidyl)hexamethylenediamine and 4-tert-octylamino-2,6-dichloro-1,3,5-s-triazine, tris-(2,2,6,6-tetramethyl-4-piperidyl) nitrilotriacetate, tetrakis-(2,2,6,6-tetra-methyl-4-piperidyl)-1,2,3,4-butanetetraanoate, 1,1'-(1,2-ethanediy1)-bis (3,3,5,5-tetramethylpiperazinone), 4-benzoyl-2,2,6,6-tetramethylpiperidine, 4-stearyloxy-2,2,6,6-tetramethylpiperidine, bis-(1,2,2,6,6-pentamethylpiperidyl)-2-n-butyl-2-(2-hydroxy-3,5-di-tert-butylbenzyl) malonate, 3-n-octyl-7,7,9,9-tetramethyl-1,3,8-triazaspiro[4.5]decan-2,4-dione, the condensate of N,N-bis-(2,2,6,6-tetramethyl-4-piperidyl) hexamethylenediamine and 4-morpholino-2,6-dichloro-1,3,5-triazine, the condensate of 2-chloro-4,6-di(4-n-butylamino-2,2,6,6-tetramethylpiperidyl)-1,3,5-triazine and 1,2-bis-(3-aminopropylamino) ethane, the condensate of 2-chloro-4,6-di(4-n-butylamino-1,2,2,6,6-pentamethylpiperidyl)-1,3,5-triazine and 1,2-bis-(3-aminopropylamino)ethane, 8-acetyl-3-dodecyl-7,7,9,9-tetramethyl-1,3,8-triazaspiro[4.5]-decane-2,4-dione, 3-dodecyl-1-(2,2,6,6-tetramethyl-4-piperidyl) pyrrolidin-2, 5-dione, 3-dodecyl-1-(1,2,2,6,6-pentamethyl-14-piperidyl) pyrrolidine-2,5-dione, a mixture of 4-hexadecyloxy- and 4-stearyloxy-2,2,6,6-tetramethylpiperidine, the condensate of N,N'-bis-(2,2,6,6-tetramethyl-4-piperidyl) hexamethylenediamine and 4-cyclohexylamino-2,6-dichloro-1,3,5-triazine, the condensate of 1,2-bis(3-aminopropylamino) ethane and 2,4,6-trichloro-1,3,5-triazine and 4-butylamino-2,2,6,6-tetramethylpiperidine (CAS reg. No. 136504-96-6); (2,2,6,6-tetramethyl-4-piperidyl)-n-dodecylsuccinimide, (1,2,2,6,6-pentamethyl-4-piperidyl)-n-dodecylsuccinimide, 2-undecyl-7,7,9,9-
tetramethyl-1-oxa-3,8-diaza-4-oxo-spiro [4,5] decane, the reaction product of 7,7,9,9-tetramethyl-2-cycloundecyl-1-oxa-3, 8-diaza-4-oxospiro [4,5] decane and epichlorohydrin without being limited thereto.

5

Insect repellents
Examples of insect repellents which can be used in products according to the invention are for example N,N-diethyl-m-toluamide, 1,2-pentanediol or insect repellant 3535.

10

Self tanning ingredients
Examples of self tanning ingredients are e.g. dihydroxyacetone and/ or erythrulose or dihydroxy acetone and/ or dihydroxyacetone precursors as described in WO 01/85124 and/ or erythrulose.

15

Skin whitening ingredients
Examples of skin whitening ingredients are for example vitamin C, sodium ascorbyl phosphate and magnesium ascorbyl phosphate, arbutin and alpha-arbutin.

20

Deodorizing active ingredients
Examples of deodorizing active ingredients which come into consideration are antiperspirants such as aluminum chlorohydrates, aluminum hydroxyacetates and acidic aluminum/ zirconium salts. Esterase inhibitors may be added as further deodorizing active ingredients. Such inhibitors are preferably trialkyl citrates, such as trimethyl citrate, tripropyl citrate, triisopropyl citrate, tributyl citrate and especially triethyl citrate (Hydagen CAT, Henkel), which inhibit enzyme activity and hence reduce odor formation. Further substances that come into consideration as esterase inhibitors are sterol sulfates or phosphates, for example lanosterol, cholesterol, campesterol, stigmasterol and sitosterol sulfate or phosphate, dicarboxylic acids and esters thereof, for example glutaric acid, glutaric acid monoethyl ester, glutaric acid diethyl ester, adipic acid, adipic acid monoethyl ester, adipic acid diethyl ester, malonic acid and malonic acid diethyl ester and hydroxycarboxylic acids and esters thereof, for example citric acid, malic acid, tartaric acid or tartaric acid diethyl ester. Antibacterial active ingredients that influence the germ flora and kill or inhibit the growth of sweat-decomposing bacteria can likewise be present in the preparations (especially in
stick preparations). Other antibacterials which could be present are chitosan, phenoxyethanol and chlorhexidinegluconate-5-chloro-2-(2,4-dichlorophenoxy)-phenol (Triclosan, Irgasan, Ciba Specialty Chemicals Inc.).

5 Anti-dandruff agents
Examples of anti-dandruff agents which may be used are climbazole, octopirox and zinc pyrithione.

Film formers
Customary film formers include, for example, chitosan, microcrystalline chitosan, quaternized chitosan, polyvinylpyrrolidone, vinylpyrrolidone/ vinyl acetate copolymers, polymers of quaternary cellulose derivatives containing a high proportion of acrylic acid, collagen, hyaluronic acid and salts thereof and similar compounds.

Preservatives
Examples of preservatives include Methyl-, Ethyl-, Propyl-, Butylparabens, Benzalkonium chloride, 2-Bromo-2-nitro-propane-1,3-diol, Dehydroacetic acid, Diazolidinyl Urea, 2-Dichlorobenzyl alcohol, DMDM hydantoin, Formaldehyde solution, Methylidibromoglutaronitrile, Phenoxyethanol, Sodium Hydroxymethylglycinate, Imidazolidinyl Urea, Triclosan and further substance classes listed in the following reference: K. F. De Polo-A short textbook of cosmetology, Chapter 7, Table 7-2,7-3, 7-4 and 7-5, p210-219.

Bacteria-inhibiting agents
Typical examples of bacteria-inhibiting agents are preservatives that have a specific action against gram-positive bacteria, such as 2,4,4’-trichloro-2’-hydroxydiphenyl ether, chlorhexidine (1,6-di-(4-chlorophenyl-biguanido) hexane) or TCC (3,4,4’-trichlorocarbanilide). A large number of aromatic substances and ethereal oils also have antimicrobial properties. Typical examples are the active ingredients eugenol, menthol and thymol in clove oil, mint oil and thyme oil. A natural deodorizing agent of interest is the terpene alcohol farnesol (3,7,11-trimethyl-2,6,10-dodecatrien-1-ol), which is present in lime blossom oil. Glycerolmonolaurate has also proved to be a bacteriostatic agent. The amount of the additional bacteria-inhibiting agents present is usually from 0.1 to 2 wt. %, based on the solids content of the preparations.
Polymers

The products according to the invention may comprise additional cosmetically and dermatologically acceptable polymers which is different from the condensation polymer in order to established the desired properties. For this purpose all anionic, cationic, amphoteric or neutral polymers may be used.

Examples for anionic polymers are homo- and copolymers of acrylic acid or methacrylic acid and the salts thereof; copolymers of acrylic acid and acrylamide and the salts thereof; sodium salts of polyhydroxy carbonic acids, water soluble or water dispersable polyester; polyurethanes such as Luviset pur® of BASF and polyureas. Especially suitable are copolymers of t-butyl acrylate, ethylacrylate, methyl acrylic acid (e.g. Luvimer® 100P); copolymers of ethylacrylate and methacrylic acid (e.g. Luviflex® Soft); copolymers of N-tert.-butyl-acrylamide, ethylacrylate and acrylic acid (Ultrahold®, strong); copolymers of vinylacetate, crotonic acid and eventually other vinlylic esters (e.g. Luviset® grades); copolymers of maleic acid anhydride; eventually with alcohols reacted anionic polysiloxanes e.g. carboxy functionalized, t-butylacrylate, methacrylic acid (Luvisko® VBM); copolymers of acrylic acid and methacrylic acid with hydrophobic monomers such as C4-C30 alkylester of methacrylic acid, C4-C30-alkylvinylester, C4-C30-alkylvinylether and hyaluronic acid. Examples of anionic polymers are also vinylacetate/ crotonic acid copolymers (Resyn® by National Starch or Gafset® by GAF); vinylpyrrolidone/ vinylacrylate copolymers (e.g. Luviflex® by BASF). Other suitable polymers are vinylpyrrolidone/ acrylate terpolymer and sodiumsulfonate containing polyamides or sodiumsulfonate containing polyesters.

Additional polymers which can be used in combination with the condensation polymers comprises Balance® CR (National Starch; Acrylate Copolymer), Balance® 0/ 55 (National Starch; Acrylate Copolymer), Balances® 47 (National Starch; Octylacrylamid/ Acrylate/ Butylaminoethylmethacrylate-Copolymer), Aquaflax® FX 64 (ISP; Isobutylene/ Ethylmaleimid/ Hydroxyethylmaleimid-Copolymer), Aquaflax® SF-40 (ISP/ National Starch; VPNinylprolactam/ DMAPO Acrylate Copolymer), Allianz® LT-120 (ISP/ Rohm & Haas; Acrylat/ C1-2 succinate/ hydroxyacrylate copolymer), Aquarez® HS (Eastman; Polyester-1), Diaformer® Z-400 (Clariant; Methacryloylethylbetaine/ Methacrylate-Copolymer), Diaformer® Z-711 (Clariant; Methacryloylethyl N-oxide/ Methacrylate-Copolymer), Diaformer® Z-712 (Clariant; Methacryloylethyl N-oxide/ MethacrylateCopolymer), Omnirez® 2000 (ISP; Monoethylester from Poly
(Methylvinylether/ Maleic Acid in Ethanol), Amphomer® HC (National Starch; Acrylate/ Octylacrylamide-Copolymer), Amphomer® 28-4910 (National Starch; Octyl-acrylamide/ Acrylate/ Butylaminoethylmethacrylate-Copolymer), Advantage® HC 37 (ISP; Terpolymer of vinylcaprolactam/ N-vinylpyrrolidone/ dimethylaminoethylmethacrylate), Advantage® LC55 and LC80 or LC A and LC E, Advantage® Plus (ISP; VA/ butylmaleate/ isobornylacrylate copolymer), Aculyne®258 (Rohm & Haas; Acrylate/ Hydroxyesteracrylate-Copolymer), Luviset® P.U.R. (BASF, Polyurethane-1), Luviflex® Silk (BASF), Eastman® AQ 48 (Eastman), Styleze® CC-10 (ISP; VP/ DMAPA Acrylates Copolymer), Styleze® 2000 (ISP; VP/ Acrylates/ Lauryl Methacrylate Copolymer), DynamX (National Starch; Polyurethane-14 AMP-Acrylates Copolymer), Resyn XP (National Starch; Acrylates/ Octylacrylamide Copolymer), Fixomer A-30 (OndeoNalco; poly-methacrylic acid (and) acrylamidomethyl propanesulfonic acid), Fixate G-100 (Noveon; AMP-Acrylates/ Allyl Methacrylate Copolymer).

Examples of cationic polymers are Polyquaternium (INCI), e.g. copolymers of vinylpyrrolidone/N-vinylimidazolium salts (Luviquat®FC, Luviquat® HM, Luviquat®MS, Luviquat®Ultracare), copolymers of N-vinylpyrrolidone/ dimethylaminoethylmethacrylate, quaternized with diethylsulfate (Luviquat® PQ 11, INCI: Polyquaternium-11), copolymers of N-vinylcaprolactam/ N-vinylpyrrolidone/ N-vinylimidazolium salts (Luviquat®Hold; INCI: Polyquaternium-46); cationic derivatives of cellulose (Polyquaternium-4 and -10), acrylamidocopolymers (Polyquaternium-7), Chitosan, cationic starch derivatives (INCI: starch hydroxypropyltrimonium chloride, corn starch modified), cationic guar derivatives (INCI: hydroxypropyl guar hydroxypropyltrimonium chloride), cationic sunflower seed derivatives (INCI: sunflower seed amidopropyl hydroxyethylidimmonium chloride), copolymers of acrylic acid, acrylamide and methacrylamidopropyltrimoniumchloride (INCI: Polyquaternium-53), Polyquaternium-32, Polyquaternium-28 without being limited thereto. Suitable cationic quaternized polymers are furthermore Merquat® (polymers on the basis of dimethylidiallyl ammoniumchloride), Gafquat® (quaternary polymers formed by reacting polyvinylpyrrolidone with quaternary ammonium compounds); Polymer JR (hydroxyethylcellulose with cationic groups), and cationic polymers on plant basis such as guar polymers, commercially available as Jaguar® grades of Rhodia.

Examples of neutral polymers are polyvinylpyrrolidone, copolymers of N-
vinylpyrrolidone and vinylacetate and/or vinylpropionate, polysiloxane, polyvinylcaprolactam and other copolymers of N-vinylpyrrolidone, copolymers of N-vinylpyrrolidone and alkylacrylate or methacrylate monomers with C1-C18 alkyl chains, copolymers of polyvinylalcohol and polyalkylene glycol such as Kollicoat® IR (BASF) or copolymers of other vinyl monomers to polyalkylene glycol, polysiloxane, polyvinylcaprolactam and copolymers with N-Vinylpyrrolidone, polyethyleneimine and the salts thereof, polyvinylamine and the salts thereof, cellulose derivatives, chitosan, polyasparagin acid salts and derivatives thereof, polyethyleneimine and the salts thereof, polyvinylamine and the salts thereof such as Luviflex® Swing (partly hydrolysed copolymer of polyvinylacetate and polyethylene glycol by BASF).

Suitable polymers are also non-ionic, water soluble respectively water dispersible polymers or oligomers such as polyvinylcaprolactam, e.g. Luviskol® Plus (BASF), or polyvinylpyrrolidone and copolymers with e.g. vinyl acetate e.g. Luviskol® VA 37 (BASF); polyamide e.g. on the basis of itaconic acid and aliphatic diamines as e.g. described in DE-A-43 33 23.

Examples of amphoteric or zwitterionic polymers are octylacrylamide/methyl methacrylate/tert-butylaminoethyl methacrylate/2-hydroxypropyl methacrylate copolymers e.g. obtainable under the names Amphomic® (Delft National) and zwitterionic polymers as disclosed, for example, in German Patent Applications DE 39 29 973, DE 21 50 557, DE 28 17 369 and DE 37 08 451. Preferred zwitterionic polymers are acrylamidopropyltrimethylammonium chloride/acrylic acid or methacrylic acid copolymers and their alkali metal and ammonium salts. Other suitable polymers are methacroylethylbetaine/methacrylate copolymers, which are obtainable commercially under the name Amersette® (AMERCHOL) and copolymers of hydroxyethyl methacrylate, methyl methacrylate, N,N-dimethylaminoethyl methacrylate and acrylic acid (Jordapon®);

Additional suitable polymers are nonionic, siloxane-containing, water-soluble or dispersible polymers, e.g. polyether siloxanes, such as Tegopren(R) (Goldschmidt) or Belsil(R) (Wacker).

Scents and fragrances
The personal care products and household products according to the invention may contain scents and fragrances comprising at least one, preferably numerous
odorant ingredients of natural and/or synthetic origin. The range of the natural odorants includes, in addition to readily volatile, also moderately and only slightly volatile components. The synthetic odorants embrace representatives from practically all classes of odorant substances.

The following list comprises examples of known odorants which may be stabilized with the stabilizing composition according to the invention without being limited thereto:
natural products such as tree moss absolute, basil oil, tropical fruit oils (such as bergamot oil, mandarin oil, etc.), mastix absolute, myrtle oil, palmarosa oil, patchouli oil, petitgrain oil, wormwood oil, lavender oil, rose oil, jasmine oil, ylang-ylang oil, etc.;
alkohols: farnesol, geraniol, linalool, nerol, phenylethyl alcohol, rhodinol, cinnamic alcohol, (Z)-hex-3-en-1-ol, menthol, a-terpineol, etc.;
aldehydes such as citral, alpha-hexyl cinnamaldehyde, Lilial, methylione, verbeneone, nootkatone, geranylacetone, etc.;
esters such as allyl phenoxyacetate, benzyl salicylate, cinnamyl propionate, citronellyl acetate, decyl acetate, dimethylbenzylcarbinyl acetate, dimethylbenzylcarbinyl butyrate, ethyl acetoacetate, cis-3-hexenyl isobutyrate, cis-3-hexenyl salicylate, linalyl acetate, methyl dihydrojasmonate, styralyl propionate, vetiveryl acetate, benzyl acetate, geranyl acetate, etc.;
lactones such as gamma-undecalactone, delta-decalactone, pentadecanolide, 12-oxahexadecanolide, etc.;
acetals such as Viridine (phenylacetaldehyde dimethylacetal), etc.;
and other components often used in perfumery such as indole, p-mentha-8-thiol-3-one, methyleugenol, eugenol, anethol, etc.

Colorants
Generally, for the coloration of household products or personal care products according to the invention all substances are suitable which have an absorption in the visible light of electromagnetic radiation (400-4000nm) The absorption is often caused by the following chromophores: Azo- (mono-, di-, tri-, or poly-)stilbene, carotenoid-, diarylmethan-, triarylmethan-, xanthene-, acridine-, quinoline-, methin- (also polymethin-) thiazole-, indamine-, indophenol-, azine-, oxazine-, thiazine-, anthraquinone- indigo-, phthalocyanin and further synthetic, natural and/or inorganic chromophores.
FD&C and D&C which can be used in household products or personal care
products according to the invention are e.g. curcumin, riboflavin, lactoflavin, tartrazine, chinolinyellow, cochenille, azorubin, amaranth, ponceau 4R, erythrosine, red 2G, indigotin, chlorophyll, chlorophyllin, caramel, carbo medicinalis, carotenoids, carotin, bixin, norbixin, annatto, orlean, capsanthin, capsorubin, lycopin, xanthophyll, flavoxanthin, lutein, kryptoxanthin, rubixanthin, violaxanthin, rhodoxanthin, canthaxanthin, betanin, anthocyanins without being limited thereto. Examples of dyes are e.g. inorganic pigments such as iron oxide (iron oxide red, iron oxide yellow, iron oxide black etc.) ultramarines, chromium oxide green or carbon black. Other colorants and dyes which can be stabilized with the stabilizing composition according to the invention comprise natural or synthetic organic pigments, disperse dyes which may be solubilized in solvents like direct hair dyes of the HC type, for example HC red No. 3, HC Blue No. 2 and all other hair dyes listed in International Cosmetic Ingredient Dictionary Handbook 7th edition 1997) or the dispersion dyes listed in Color Index International Society of Dyers and Colorist, color varnishes (insoluble salts of soluble dyes, like many Ca-, Ba- or Al-salts of anionic dyes), soluble anionic or cationic dyes such as acid dyes (anionic), basic dyes (cationic), direct dyes, reactive dyes or solvent dyes, fluorescent dyes, fluorescein and isothiocyanates.

Active ingredients
Active ingredients which might be used in personal care products and household products according to the invention comprise vitamins such as tocopherol, ascorbic acid, ascorbyl phosphate, vitamin Q, D, and K, retinol, retinal, retinoic acid, retinol acetate, retinol palmitate, biotin, carotinoid derivatives such as beta carotene, lycopene, astaxanthene, vegetable extracts, antibacterial ingredients, instable amino acids comprising dipeptides, oligopeptides and polypeptides such as methionen, cystein, cystin, tryptophan, phenylalanine, tyrosine, phenols, polyphenols or flavonoids, bisabolol, allantoin, phytantriol, panthenol, AHA acids, Ubichinones such as Coenzym Q 10, ceramides, pseudoceramides, essential oils, plant extracts deoxyribonucleic acid, protein hydrolysates.

Preferred body-care products are skin care preparations, preparations containing scents and/or fragrances, hair-care preparations, dentrifices, deodorant and antiperspirant, decorative preparations, light protection preparations and functional preparations.

Examples of skin care preparations are, in particular, body oils, body lotions, body
creams, body gels, facial lotions, facial creams, facial gels, e.g. eye creams, anti-wrinkle creams, day care lotions, night creams, treatment creams, skin protection ointments, sunscreens, shaving preparations, such as shaving foams or gels, skin powders such as baby powder, moisturizing gels, moisturizing creams, moisturizing sprays, revitalizing body sprays, cellulite gels, anti-acne preparations, cleansing milks and peeling preparations.

According to the invention the skin care preparations have a pH of 3-10, preferably pH 4-8.

Preparations containing scents and/or fragrances are in particular perfumes, toilet waters and shaving lotions (aftershave preparations).

Examples of hair care products are, for example, shampoo for humans and animals, hair conditioners, products for styling and treating hair, perming agents, hair sprays and lacquers, hair gels, hair fixatives and hair dying or bleaching agents.

Examples of dentifrices are in particular tooth cream, toothpastes, mouth-washes, mouth rinses, anti-plaque preparations and cleansing agents for dentures.

Examples of decorative preparations are in particular lipstick, nail varnishes, eye shadow, mascaras, dry and moist make-up, rouge, powders, depilatory agents, and suntan lotions.

Examples of functional preparations are cosmetic or dermatological compositions containing active ingredients such as hormone preparations, vitamin preparations, vegetable extract preparations and antibacterial preparations.

Personal care products in accordance with the invention such as cosmetic and dermatological compositions can be in the form of a liquid, lotion, a thickened lotion, a gel, a cream, a milk, an ointment, a paste, a powder, a make-up, or a solid tube stick and can be optionally be packaged as an aerosol and can be provided in the form of a mousse, foam or a spray foams, sprays, sticks or aerosols or wipes. The personal care products according to the invention can be packed as an ampoule. The personal care products according to the invention can be in the form of a suspension or dispersion in solvents or fatty substances, or alternatively in the form of an emulsion or micro emulsion (in particular of OW or
W/O type, O/W/O or W/O/W-type), such as a cream or a milk, a vesicular dispersion, in the form of an ointment, a gel, a solid tube stick or an aerosol mousse. The emulsions can also contain anionic, nonionic, cationic or amphoteric surfactants.

The condensation polymer may be present in the oil or in the aqueous or aqueous ethanolic phase.

The condensation polymers as defined above are especially suitable for personal care products, in particular:

- skin-care preparations, e. g. skin-washing and cleansing preparations in the form of tablet-form or liquid soaps, sapless detergents or washing pastes,
- bath preparations, e. g. liquid (foam baths, milks, shower preparations) or solid bath preparations, e. g. bath cubes and bath salts;
- skin-care preparations, e. g. skin emulsions, multi-emulsions or skin oils; body oils, body lotions, body gels; skin protection ointments; facial creams/lotions/gels; day care skin or facial creams/lotions/gels; night creams, eye creams/lotions/gels/ampoules; anti-wrinkle creams/lotions/gels/ampoules;
- cosmetic personal care preparations, e. g. facial make-up in the form of day creams or powder creams, face powder (loose or pressed), rouge or cream make-up, eye-care preparations, e. g. eye shadow preparations, mascara, eyeliner, eye creams or eye-fix creams; lip-care preparations, e. g. lipsticks, lip gloss, lip contour pencils, nail-care preparations, such as nail varnish, nail varnish removers, nail hardeners or cuticle removers;
- foot-care preparations, e. g. foot baths, foot powders, foot creams or foot balsams, special deodorants and antiperspirants or callus-removing preparations;
- light-protective preparations, such as sun milks, lotions, creams or oils, facial day care products, unblocks or tropicales, pre-tanning preparations or after-sun preparations;
- skin-tanning preparations, e. g. self-tanning creams;
- depigmenting preparations, e. g. preparations for bleaching the skin or skin-lightening preparations;
- insect-repellents, e. g. insect-repellent oils, lotions, sprays or sticks;
• deodorants, such as deodorant sprays, pump-action sprays, deodorant gels, sticks or roll-ons;
• antiperspirants, e. g. antiperspirant sticks, creams or roll-ons, pump-action sprays;
• preparations for cleansing and caring for blemished skin, e. g. synthetic detergents (solid or liquid), peeling or scrub preparations or peeling masks;
• hair-removal preparations in chemical form (depilation), e. g. hair-removing powders, liquid hair-removing preparations, cream-or paste-form hair-removing preparations, hair-removing preparations in gel form or aerosol foams;
• shaving preparations, e. g. shaving soap, foaming shaving creams, non-foaming shaving creams, foams and gels, pre-shave preparations for dry shaving, aftershave or aftershave lotions;
• scent or fragrance preparations, e. g. scent, fragrance and/ or odorant ingredient containing preparations such as perfumes, eau de Colognes, eau de toilettes, eau de perfumes, eau de toilettes, perfume oils or perfume creams;
• dentifrices, in particular tooth creams, toothpastes, mouth-washes, mouth rinses, anti-plaque preparations and cleansing agents for dentures;
• decorative preparations, in particular lipsticks, nail varnishes, eye shadows, mascaras, dry and moist make-up, rouge, powders, depilatory agents and suntan lotions
• cosmetic formulations containing active ingredients, in particular hormone preparations, vitamin preparations, vegetable extract preparations and antibacterial preparations.

The final formulations listed may exist in a wide variety of presentation forms, for example in the form of liquid preparations, as a W/O, O/W, O/W/O, W/O/W or PIT emulsion and all kinds of micro emulsions, in the form of a gel, in the form of an oil, a cream, milk or lotion, in the form of a stick, in the form of a spray (spray with propellant gas or pump-action spray) or an aerosol, in the form of a foam, or in the form of a paste.

Especially preferred embodiments of the invention are hair care preparations containing the condensation polymer.
Hair-care preparations according to the invention contain the *condensation polymer* in a concentration of 0.1 to 30 wt. %, preferably 0.5 to 20 wt. % based on the total weight of the composition.

Preferably the hair care preparations are in the form of a cosmetic hair-treatment preparations, e. g. hair-washing preparations in the form of shampoos and conditioners, hair-care preparations, e. g. pre-treatment preparations, hair tonics, styling creams, styling gels, pomades, hair rinses, treatment packs, intensive hair treatments, e. g. leave-on and rinse-off deep conditioners, hair-structuring preparations, e. g. hair-waving preparations for permanent waves (hot wave, mild wave, cold wave), hair-straightening preparations, liquid hair-setting preparations, hair foams, hairsprays, bleaching preparations, e. g. hydrogen peroxide solutions, lightening shampoos, bleaching creams, bleaching powders, bleaching pastes or oils, temporary, semi-permanent or permanent hair colorants, preparations containing self-oxidizing dyes, or natural hair colorants, such as henna or chamomile.

Based on the application the hair care preparations may be in the form of a (aerosol) spray, (aerosol) foam, gel, gel spray, cream, lotion or a wax. Hair sprays comprise as well aerosol sprays as pump sprays without propellant. Hair foams comprise as well aerosol foams as pump foams without propellant. Hair sprays and hair foams comprise mainly or exclusively water soluble or water dispersible components. If the components used in hair sprays or hair foams according to the invention are water dispersible, then they may be in the form of microdispersions with particle sizes of usually 1 to 350 nm, preferably 1 to 250 nm. The solid content of such preparations is typically in the range of 0.5 to 20 wt. % of the total weight of the preparation. Such microdispersions normally do not need further emulsifiers or tensides for their stabilization.
A preferred hair-treatment composition comprises:

1. 0.2 to 20 wt. % of a \textit{condensation polymer}

2. 30 to 99.5 wt. %, preferably 40 to 99 wt. %, of at least one solvent chosen from water, water-miscible solvents and mixtures thereof

3. 0 to 70 wt. % of propellant

4. 0 to 10 wt. % of at least one water-soluble or water-dispersible hair polymer which is different from 1.)

5. 0 to 0.3 % by weight of at least one water-insoluble silicone

6. 0 to 0.5 wt. % of at least one wax, preferably at least one fatty acid amide,

7. and customary additives.

The hair care preparations according to the invention can comprise, as component 4), at least one other water-soluble or water-dispersible hair polymer. The content of this component is then generally from about 0.1 to 10 % by weight, based on the total weight of the composition. Here, it is preferable to use water-soluble or water-dispersible polyurethanes which, if desired, additionally comprise siloxane groups in copolymerized form.

The composition according to the invention can comprise, as component 5), at least one water-insoluble silicone, in particular a polydimethylsiloxane, e.g. the Abil® grades from Goldschmidt. The content of this component is then generally from about 0.0001 to 0.2 % by weight, preferably from 0.001 to 0.1 % by weight, based on the total weight of the composition. Preference is given to using at least one fatty acid amide, such as, for example, erucamide, as component 6).

The hair care preparations according to the invention can, where appropriate, additionally comprise an antifoam, e.g. one based on silicone. The amount of antifoam is generally up to 0.001 % by weight, based on the total amount of the composition. The compositions according to the invention have the advantage that, on the one hand, they impart the desired hold to the hair and, on the other hand, the polymers are easy to wash out. Generally, a natural appearance and shine is imparted to the hair, even when the hair is by its very nature especially thick and/or dark.

In particular, the hair care preparations according to the invention can be formulated to give hair-treatment compositions, in particular hairsprays, with a high propellant content. Advantageously, the hair-treatment compositions according to the invention essentially do not have a "flaking" effect.
In a preferred embodiment, the hair care preparations according to the invention comprise:

1. 0.05 to 20 wt. % of at least one condensation polymer
2. 20 to 99.95 wt. % of water and/or alcohol
3. 0 to 79.5 wt. % of customary additives

The term alcohols refers to all alcohols usually used in cosmetics such as ethanol, n-propanol, isopropanol without being limited thereto.

Customary additives are e.g. propellants, anti-foaming agents, surface active ingredients e.g. tensides, emulsifiers, foam former and solubilisators. The used surface active ingredients may be anionic, cationic, amphoteric or neutral. Further ingredients may be preservatives, antioxidants, perfume oils, lipidic refatters, active and/or caring ingredients such as panthenol, collagen, vitamins, protein hydrolysates, alpha- and beta hydroxyl carbonic acids, stabilisers, pH regulators, opacifiers, colorants, dyes, gel formers, salts, moisturizers, complex formers, viscosity regulators or light screening agents without being limited thereto. Furthermore all known styling- and conditioning polymers can be used in combination with the condensation polymers in order to obtain special effects.

As traditional polymers the above mentioned cationic, anionic, neutral, non-ionic and amphoteric polymers may be used which are included explicitly herein.

In order to obtain certain properties the hair care preparations may additionally comprise conditioning compounds on silicone basis such as polyalkylsiloxane, polyarylsiloxane, polyarylmethylsiloxane, silicone resins, polyethersiloxane or dimethicon copolyole (CTFA) and amino functionalized silicone compounds such as amodimethicone (CTFA), GP 4 Silicone fluid® and GP 7100® (Genesee), Q2 8220® (Dow Corning), AFL 40® (Union Carbide) or polymers as disclosed in EP-B 852 488.

Other suitable ingredients comprise silicone propfpolymers having a polymeric silicone backbone and non-silicone containing side chains or a non silicone containing polymeric backbone and silicone side chains such as Luviflex® Silk or polymers disclosed in EP-B 852 488.

Preferred hair care preparations containing the condensation polymer are styling
preparations such as hair-sprays and hair foams.

In a preferred embodiment these preparations comprise:

1. 0.1 to 10 wt. % of at least one condensation polymer
2. 20 to 99 wt. % water and/or alcohol
3. 0 to 70 wt. % of at least one propellant
4. 0 to 20 wt. % of customary additives

Propellants for hair sprays or aerosol foams are typically used propellants.

Preferred are mixtures of propane/butane, pentane, dimethyl ether, 1,1-difluoroethane (HFC-152a), carbon dioxide, nitrogen or compressed air.

A preferred preparation for aerosol foams comprise:

1. 0.1 to 10 wt. % of at least one condensation polymer
2. 55 to 99.8 wt. % water and/or alcohol
3. 5 to 20 wt. % of a propellant
4. 0.1 to 5 wt. % of an emulsifier
5. 0 to 10 wt. % of customary additives

Emulsifiers for aerosol foams may be all conventionally used non-ionic, cationic, anionic or amphoteric emulsifier.

Examples of non-ionic emulsifiers comprise (INCI-nomenclature) Laureths, e.g. Laureth-4; Cetheths, e.g. Cetheth-1, polyethylene glycol-cetylether; cethareths, e.g. cethareth-25, polyglycolfattyacidglycerides, hydroxylated lecithins, lactyl esters of fatty acids, alkyl(polyglycosides).

Examples of cationic emulsifiers are cetyl(dimethyl-2-hydroxyethyl)ammonium-dihydrogen phosphate, cetyltrimonium chloride, cetyltrimmonium bromide, cocotrimonium-methylsulfate quaternium-1 to x (INCI).

Anionic emulsifiers can be selected from alkylsulfate, alkylethersulfate, alkylsulfonate, alkaryl sulfonate, alkylsuccinate, alkylsulfosuccinate, N-alkoyl sarcosinate, acyltaurate, acylsulfonate, alkylphosphate, alkyletherphosphate, alkylethercarboxylate, alpha-olefinesulfonate, especially the alkali-und earth alkali salts, e.g. sodium, potassium, magnesium, calcium, as well as ammonium- and triethanolamine-salts. The alkylethersulfate,
alkyletherphosphate and alkylethcarboxylate may comprise between 1 to 10 ethyleneoxide or propyleneoxide units, preferably 1 to 3 ethyleneoxide-units per molecule.

Preferred hair care preparations comprise hair gels. Such hair gels comprise exemplary:

1. 0.1 to 20 wt. % preferably 1 to 10 wt. % of at least one condensation polymer
2. 0 to 10 wt. % of at least one carrier (solvent), selected from C2 to C5 alcohols, preferably ethanol
3. 0.01 to 5 wt. %, preferably 0.2 to 3 wt. % of at least one thickener
4. 0 to 50 wt. % of a propellant
5. 0 to 10 wt. %, preferably 0.1 to 3 wt. % of a styling polymer different to 1.), preferably a water soluble non-ionic polymer
6. 0-1 wt. % of at least one refatter, preferably selected from glycerine and glycerine derivatives
7. 0 to 30 wt. % of other customary additives e.g. a silicone component
8. water ad 100 wt. %

An exemplary styling gel can be comprised as follows:

1. 0.1 to 10 wt. % of a condensation polymer
2. 60 to 99.85 wt. % of water and/ or alcohol
3. 0.05 to 10 wt. % of a gel former
4. 0.20 wt. % of other customary additives

As gel formers all typically cosmetic gel formers can be used such as slightly cross linked polyacrylic acid e.g. Carbomer (INCI), cellulose derivatives, polysaccarides e.g. xanthan gum, capryl/ caprin triglyceride, sodiumacrylate-copolymers, polyquaternium-32 (and) paraffinum liquidum (INCI), sodiumacrylate-copolymers (and) paraffinum liquidum (INCI) (and) PPG-1 trideceth-6, polyquaternium-37 (and) propyleneglycoldicapratdicarylate (and) PPG-1 trideceth-6, polyquaternium-7, polyquaternium-44.
Preferred hair care preparations are shampoo preparations comprising the
condensation polymer as strengthening and/or conditioning agent.
Preferred shampoo preparations comprise:

1. 0.05 to 10 wt. % of a condensation polymer
2. 25 to 94.95 wt. % of water
3. 5 to 50 wt. % of tenside (surface active ingredient)
4. 0 to 5 wt. % of an additional conditioning agent
5. 0 to 10 wt. % other customary additives

All typically used anionic, neutral, amphoteric or cationic tensides may be used
within the shampoo preparations.
Exemplary anionic tensides comprise alkylsulfate, alkylethersulfate,
aldehydesulfonate, alkylarylsulfonate, alkylsuccinate, alkylsulfosuccinate, N-
alkoysarcosinate, acyltaurate, acylisethionate, alkylphosphate,
alkyletherphosphate, alkylerthcarboxylate, alpha-olefinesulfonate, especially the
alkali-und earth alkali salts, e.g. sodium, potassium, magnesium, calcium, as well
as ammonium- and triethanolamine-salts. The alkylethersulfate,
alkyletherphosphate and alkylerthcarboxylate may comprise between 1 to 10
ethyleneoxide or propyleneoxide units, preferably 1 to 3 ethyleneoxide-units per
molecule.
Suitable are e.g. sodium laurylsulfate, ammonium lauryl sulfate, sodium
laurylethersulfate, ammonium laurylethersulfate, sodium laurylsarconisate,
sodiumoleylsuccinate, ammonium laurylsulfosuccinate, sodium
dodecybenzolsulfonate, triethanolamidodecylbenzolsulfonate.
Suitable amphoteric tensides are e.g. alkylbetaine, alkylamidopropylbetaine,
aldehydesulfobetaine, alkylglycinate, alkylcarboxyglycinate, alkylamphoacetate or
propionate, alkylamphodiacetate or dipropionate such as
cocodimethylsulfopropylbetaine, laurylbetaine, cocamidopropylbetaine or sodium
cocamphopropionate.

Examples of non ionic tensides are e.g. reaction products of aliphatic alcohols or
alkyphenols with 6 to 20 C-Atoms of a linear or branched alkyl chain with
ethyleneoxide and/or propyleneoxide. The amount of alkyleneoxide is about 6 to
60 mole to one mol alkohol. Furthermore alkylaminoxide, mono- or
dialkyalkanolamide, fatty esters of polyethyleneglysols, alkylpolyglycosides or
sorbitan ethyl ester are suitable for the incorporation of hair care preparations according to the invention.

Furthermore, the shampoo preparations may contain the usual cationic tensides such as quaternized ammonium compounds e.g. cetyltrimethylammoniumchloride or bromide (INCl: cetrimoniumchloride or bromide), hydroxyethylcetyldimoniumphosphate (INCl: Quaternium-44), Luviquat® Mono LS (INCl: Cocotrimoniummethosulfate), poly(oxy-1,2-ethanediyl), ((Octadecynitrilio) tri-2,1-ethanediyl)tris(hydroxy)-phosphate (1:1) (Salt) (INCl Quaternium-52).

For special effects typical conditioning agents may be combined with the condensation polymers within the shampoo preparations such as the previously mentioned cationic polymers named polyquaternium (INCl), especially copolymers of vinylpyrrolidone/ N-vinylimidazoliumsalts (Luviquat® FC, Luviquat® HM, Luviquat® MS, Luviquat® Ultracare), copolymers of N-vinylpyrrolidone/ dimethylaminoethylmethacrylate quaternized with diethylsulfate (Luviquat® PQ 11), copolymers of N-cationic cellulose derivatives (Polyquaternium-4 und-10), acrylamide copolymers (Polyquaternium-7). Furthermore protein hydrolysates may be used as well as conditioning agents on silicone basis such as polyarylsiloxane, polyarylsiloxane, polyethersiloxane or silicone resins. Other suitable silicone compounds are dimethiconopolyole (CTFA) and amino functionalised silicone derivatives such as amodimethicone (CTFA).

Furthermore cationic guar derivatives such as guarhydroxypropyltrimoniumchloride (INCl) may be used.

Preferred hair care compositions are hair treatment preparations such as rinse off- and leave on-conditioners comprising the condensation polymer as strengthening and/or conditioning agent.

Preferred conditioner preparations comprise:

1. 0.05-10 wt. % of a condensation polymer;
2. 25-94.95 wt. % of water;
3. 0.1-30 wt. % of tensides / emulsifier / surface active ingredient;
4. 0.1-30 wt. % of oil / emollient;
5. 0-5 wt. % of an additional conditioning agent;
6. 0-10 wt. % other customary additives.

All typically used anionic, neutral, amphoteric or cationic tensides may be used
within the conditioner preparations.

Exemplary anionic tensides comprise alkylsulfate, alkylethersulfate, alkylsulfonate, alkylarylsulfonate, alkylsuccinate, alkylsulfosuccinate, N-alkoylsarkosinate, acyltaurate, acylisethionate, alkylphosphate, alkyletherphosphate, alkylethercarboxylate, alpha-olefinesulfonate, especially the alkali-und earth alkali salts, e.g. sodium, potassium, magnesium, calcium, as well as ammonium- and triethanol amine-salts. The alkylethersulfate, alkyletherphosphate and alkylethercarboxylate may comprise between 1 to 10 ethyleneoxide or propyleneoxide units, preferably 1 to 3 ethyleneoxide-units per molecule.

Suitable are e.g. sodium laurylsulfate, ammonium lauryl sulfate, sodium laurylethersulfate, ammonium laurylethersulfate, sodium lauroylsarkonisate, sodiumoleylsuccinate, ammonium laurylsulfosuccinate, sodium dodecylbenzolsulfonate, triethanolamidodecylbenzolsulfonate.

Suitable amphoteric tensides are e.g. alkylbetaine, alkylamidopropylbetaine, alkylsulfobetaine, alkylglycinate, alkylcarboxyglycinate, alkylamphoacetate or propionate, alkylamphodiacetate or dipropionate such as cocodimethylethannepropylbetaine, laurylbetaine, cocamidopropylbetaine or sodium cocamphopropionate.

Examples of non ionic tensides are e.g. reaction products of aliphatic alcohols or alkylphenols with 6 to 20 C-Atoms of a linear or branched alkyl chain with ethyleneoxide and/ or propyleneoxide. The amount of alkyleneoxide is about 6 to 60 mole to one mol alcohol. Furthermore alkylaminoxide, mono- or dialkyllankanolamide, fatty esters of polyethylene glycols, alkylpolyglycosides or sorbitanether ester are suitable for the incorporation of hair care compositions according to the invention.

Furthermore, the conditioner preparations may contain the usual cationic tensides such as quaternised ammonium compounds e.g. cetyltrimethylammoniumchloride or bromide (INCI: cetrimoniumchloride or bromide), hydroxyethylcetyltrimonium phosphate (INCI: Quaternium-44), Luviquat® Mono LS (INCI: Cocotrimeroniummethosulfate), poly(oxy-1,2-Ethandiy1), (Octadecylnitrilo) tri-2,1-Ethandiy1) tris-(hydroxy)-phosphate (INCI Quaternium-52).

For special effects typical conditioning agents may be combined with the condensation polymers within the conditioning preparations such as the previously
mentioned cationic polymers named polyquaternium (INCI), especially copolymers of vinylpyrrolidone/ N-vinylimidazoliumsalts (Luquvat® FC, Luquvat® HM, Luquvat® MS, Luquvat® Ultracare), copolymers of N-vinylpyrrolidone/dimethylaminoethylmethacrylate quaternised with diethylsulfate (Luquvat® PQ 11), copolymers of N-cationic cellulose derivatives (Polyquaternium-4 and-10), acrylamid copolymers (Polyquaternium-7). Furthermore protein hydrolysates may be used as well as conditioning agents on silicone basis such as polyarylsiloxane, polyarylalkylsiloxane, polyethersiloxane or silicone resins. Other suitable silicone compounds are dimethiconopolyole (CTFA) and amino functionalised silicone derivatives such as amodimethicone (CTFA).

Furthermore cationic guar derivatives such as guarhydroxypropyltrimoniumchloride (INCI) may be used.

Furthermore, the conditioner preparations may contain the usual surface active ingredients like emulsifiers, solubilizers and the like. An emulsifier enables two or more immiscible components to be combined homogeneously. Moreover, the emulsifier acts to stabilize the composition. Emulsifiers that may be used in the present invention in order to form O/W, W/O, O/W/O or W/O/W emulsions/microemulsions include sorbitan olate, sorbitan sesquioleate, sorbitan isostearate, sorbitan trioleate, polyglyceryl-3-diisostearate, polyglycerol esters of oleic/ isostearic acid, polyglyceryl-6 hexaricinolate, polyglyceryl-4-oleate, polyglyceryl-4 oleate/ PEG-8 propylene glycol cocoate, oleamide DEA, TEA myristate, TEA stearate, magnesium stearate, sodium stearate, potassium laurate, potassium ricinoleate, sodium cocoate, sodium tallowate, potassium castorate, sodium olate, and mixtures thereof. Further exemplary emulsifiers are phosphate esters and the salts thereof such as cetyl phosphate (Amphisol® A), diethanolamine cetyl phosphate (Amphisol®), potassium cetyl phosphate (Amphisol® K), sodium glyceryl olate phosphate, hydrogenated vegetable glycerides phosphate and mixtures thereof. Furthermore, one or more synthetic polymers may be used as an emulsifier. For example, PVP eicosene copolymer, acrylates/ C_{10-30} alkyl acrylate crosspolymer, acrylates/ steareth-20 methacrylate copolymer, PEG-22/ dodecyl glycol copolymer, PEG-45/ dodecyl glycol copolymer, and mixtures thereof. Further exemplary emulsifiers are fatty alcohols, e.g. cetearyl alcohol (Lanette O, Cognis Cooperation), cetyl alcohol (Lanette 16, Cognis Cooperation), stearyl alcohol (Lanette 18, Cognis Cooperation), Laneth-5 (Polychol 5, Croda Chemicals), furthermore sucrose and glucose derivatives, e.g. sucrose distearate (Crodesta F-10, Croda Chemicals),
Methyl glucose isostearate (Isolan IS, Degussa Care Chemicals), furthermore ethoxylated carboxylic acids or polyethyleneglycol esters and polyethyleneglycol ethers, e.g. steareth-2 (Brij 72, Uniqema), steareth-21 (Brij 721, Uniqema), ceteareth-25 (Cremophor A25, BASF Cooperation), PEG-40 hydrogenated castor oil (Cremophor RH-40, BASF Cooperation), PEG-7 hydrogenated castor oil (Cremophor WO7, BASF Cooperation), PEG-30 Dipolyhydroxystearate (Arlacel P 135, Uniqema), furthermore glyceryl esters and polyglyceryl esters, e.g. polyglyceryl-3-diisostearate (Hostacerin TGI, Clariant Cooperation), polyglyceryl-2 dipolyhydroxystearate (Dehymul PGPH, Cognis Cooperation), polyglyceryl-3 methylglucose distearate (Tego Care 450, Degussa Care Chemicals). The preferred emulsifiers are cetyl phosphate (Amphisol® A), diethanolamine cetyl phosphate (Amphisol®), potassium cetyl phosphate (Amphisol® K), PVP Eicosene copolymer, acrylates/ C<sub>10-30</sub>alkyl acrylate crosspolymer, PEG-20 sorbitan isostearate, sorbitan isostearate, and mixtures thereof. The one or more emulsifiers are present in a total amount of at least 0.01 wt. % of the total weight of the composition. Preferably about 0.01 wt. % to about 20 wt. % of the total weight of the composition of the present invention is used. Most preferred, about 0.1 wt. % to about 10 wt. % of emulsifiers are used.

Furthermore, the conditioner preparations may contain the usual oily and fatty components may be chosen from mineral oils and mineral waxes; oils such as triglycerides of caprinic acid and/ or caprylic acid or castor oil; oils or waxes and other natural or synthetic oils, in an preferred embodiment esters of fatty acids with alcohols e.g. isopropanol, propyleneglycol, glycerin or esters of fatty alcohols with carbonic acids or fatty acids; alkylbenzoates; and/ or silicone oils.

Exemplary fatty substances which can be incorporated in the oil phase of the emulsion, microemulsion, oleo gel, hydrodispersion or lipodispersion of the present invention are advantageously chosen from esters of saturated and/ or unsaturated, linear or branched alkyl carboxylic acids with 3 to 30 carbon atoms, and saturated and/ or unsaturated, linear and/ or branched alcohols with 3 to 30 carbon atoms as well as esters of aromatic carboxylic acids and of saturated and/ or unsaturated, linear or branched alcohols of 3-30 carbon atoms. Such esters can advantageously be selected from octylpalmitate, octylcocoate, octylisostearate, octyldeocetylmyristate, cetearylisononanoate, isopropylmyristate, isopropylpalmitate, isopropylstearate, isopropyleolate, n-butylstearate, n-hexyllaurate, n-decylolate, isoctylstearate, isonomylstearate,
isononylisononanoate, 2-ethyl hexyl palmitate, 2-ethylhexyl laurate, 2-hexyldecanoate, 2-ocetyl/1-decyl palmitate, stearyl/heptanoate, oleyloleate, oleyl erucate, erucyl olate, erucyl erucate, tridecyl stearate, tridecyl trimellitate, as well as synthetic, half-synthetic or natural mixtures of such esters e.g. jojoba oil.

Other fatty components suitable for conditioner preparations of the present invention include polar oils such as lecithins and fatty acid triglycerides, namely triglycerol esters of saturated and/or unsaturated, straight or branched carboxylic acid with 8 to 24 carbon atoms, preferably of 12 to 18 carbon-atoms whereas the fatty acid triglycerides are preferably chosen from synthetic, half synthetic or natural oils (e.g. cocoglyceride, olive oil, sun flower oil, soybean oil, peanut oil, rape seed oil, sweet almond oil, palm oil, coconut oil, castor oil, hydrogenated castor oil, wheat oil, grape seed oil, macadamia nut oil and others); apolar oils such as linear and/or branched hydrocarbons and waxes e.g. mineral oils, vaseline (petrolatum); paraffins, squalane and squalene, polyolefines, hydrogenated polyisobutenes and isohexadecanes, favored polyolefines are polydecenes; dialkyl ethers such as dicaprylyl ether; linear or cyclic silicone oils such as preferably cyclomethicone (octamethylcyclotetrasilo xane; cetyl dimethicone, hexamethylcyclotrisiloxane, polydimethylsiloxane, poly(methylphenylsiloxane) and mixtures thereof.

Other fatty components which can advantageously be incorporated in conditioner preparations of the present invention are isoeikosane; neopentyl glycol diheptanoate; propylene glycol caprylate/ dicaprate; caprylic/ capric/ diglyceryl succinate; butylene glycol caprylat/ caprat; C_{12-13}-alkyl lactate; di-C_{12-13}-alkyl tartrate; trios tearin; dipentaerythrityl hexacaprylat/ hexacaprate; propylene glycol monoisostearate; tricaprylin; dimethylisosorbide. Especially beneficial is the use of mixtures C_{12-15}-alkylbenzoate and 2-ethylhexylisostearate, mixtures C_{12-15}-alkylbenzoate and isotridecylisononanoate as well as mixtures of C_{12-15}-alkylbenzoate, 2-ethylhexylisostearate and isotridecylisononanoate.

The oily phase of the conditioner preparation can also contain natural vegetable or animal waxes such as bees wax, china wax, bumblebee wax and other waxes of insects as well as shea butter and cocoa butter.
Suitable silicone oils are e.g. dimethylpolysiloxane, diethylpolysiloxane, diphenylpolysiloxane, cyclic siloxanes, poly(methylphenylsiloxanes) as well as amino-, fatty acid-, alcohol-, polyether-, epoxy-, fluoro-, glycoside-, and/ or alkyl modified silicone compounds which are liquid or solid at room temperature and mixtures thereof. The number average molecular weight of the dimethicones and poly(methylphenylsiloxanes) is preferably in the range of 100 to 150000 g/ mol. Preferred cyclic siloxanes comprise 4- to 8- membered rings which are for example commercially available as cyclomethicones.

In all preparations described above the sum of the ingredients adds to 100%.

The condensation polymers provided by the present invention are also suited for incorporation into home care and fabric care products, such as household cleansing and treatment agents, for example in laundry products and fabric softeners, non-detergent based fabric products, liquid cleansing and scouring agents, glass detergents, neutral cleaners (all-purpose cleaners), acid household cleaners (bath), bathroom cleaners, for instance in washing, rinsing and dishwashing agents, kitchen and oven cleaners, clear rinsing agents, dishwasher detergents, shoe polishes, polishing waxes, floor detergents and polishes, metal, glass and ceramic cleaners, textile-care products, rug cleaners and carpet shampoos, agents for removing rust, color and stains (stain remover salt), furniture and multipurpose polishes and leather and vinyl dressing agents (leather and vinyl sprays) air fresheners, drain cleaners, disinfectant solutions, upholstery cleaners, automotive care products (e.g., to clean and/ or polish and protect paint, tires, chrome, vinyl, leather, fabric, rubber, plastic and fabric), degreasers, polishes (glass, wood, leather, plastic, marble, granite, and tile, etc. ), and metal polishes and cleaners, candles, gel candles, air fresheners and fragrance oils (for the home).

Thus, the present invention also concerns home care and fabric care products containing condensation polymers in accordance with the invention such as particularly disclosed above.

The condensation polymers may be employed in fabric treatment that takes place after use of the fabric, referred to as fabric care. Such treatments include laundering, which uses detergents, laundry aids and/ or fabric conditioner, and the application of non-detergent based fabric care products, such as spray-on
products. When employed in this fashion, the condensation polymer is intended for deposition onto the fabric and used to protect the fabric, colorants and fragrances associated with said these fabrics from environmental damage.

In a further embodiment the invention relates to the use of an effective amount of a condensation polymer as defined above in protective, anti corrosion or decorative coatings; paper coating formulations; inks; biocides; oil field chemicals; and for the immobilization of heavy metals in soil, bitumen or concrete, without being limited thereto.

The following examples are provided to further illustrate the processes and compositions of the present invention. These examples are illustrative only and are not intended to limit the scope of the invention in any way.

**Example 1**

*Synthesis of a condensation polymer comprising a group (I) wherein A is ethylene, R¹ to R⁶ are hydrogen, n, m, o = 1 and X¹, X² and X³ are hydroxy*

355g of tris(hydroxymethyl)aminomethane (TRIS) and 245g of succinic anhydride were added to a glass reactor equipped with stirrer and condenser, and which can be heated by oil. The mixture was slowly heated to 180°C and 2 h later vacuum was applied to remove the reaction water. After 5 h the mixture was cooled and a glassy polymer with an acid value of 2 mg KOH/g was obtained.

**Example 2**

*Synthesis of a condensation polymer comprising a group (I) wherein A is ethylene, R¹ to R⁶ are hydrogen, n, m, o = 1 and wherein at least one X¹, X² or X³ is a group –O-CO-CH₂CH₂-CO-N(R⁷, R⁸) wherein R⁷ and R⁸ form a N-methyl piperazine group*

276g of N-methyl piperazine was added to a glass reactor equipped with stirrer and condenser, and which can be heated by oil. Next 384g succinic anhydride was added and the mixture was slowly heated to 120°C. 1 h after the start, 139g TRIS was added and the mixture was heated to 180°C. After ½ h, vacuum was applied to remove the reaction water. After 12 h the mixture was cooled and a polymer with an acid value of 47 mg KOH/g was obtained.
Example 3
Synthesis of a condensation polymer comprising a group (I) wherein A is 1,2-cyclohexyl, \( R^1 \) to \( R^6 \) are hydrogen, \( n, m, o = 1 \) and wherein at least one \( X^1, X^2 \) or \( X^3 \) is a group \(-O-CO-(1,2-C_6H_4)-CO-N(R^8, R^9)\) wherein \( R^8 \) and \( R^9 \) are dimethyl aminopropyl groups.

276g of bis(N,N-dimethyl aminopropyl) amine and 295g of molten hexahydro phthalic anhydride were added to a glass reactor equipped with stirrer and condenser, and which can be heated by oil. The mixture was slowly heated to 120°C. 1 h after the start, 80g TRIS was added and the mixture was heated to 180°C. After \( \frac{1}{2} \) h, vacuum was applied to remove the reaction water. After 16 h the mixture was cooled and a polymer with an acid value of 25 mg KOH/g was obtained.

Example 4
Synthesis of a condensation polymer comprising a group (I) wherein A is ethylene \( R^1 \) to \( R^6 \) are hydrogen, \( n, m, o = 1 \) and wherein at least one \( X^1, X^2 \) or \( X^3 \) is a group \(-O-CO-CH_2CH_2-COOR^{10}\) wherein \( R^{10} \) is a polyethyleneoxide group

407g of polyethyleneoxide-monomethylether (MW=750) was added to a glass reactor equipped with stirrer and condenser, and which can be heated by oil. Next 68g succinic anhydride was added and the mixture was slowly heated to 120°C. 1 h after the start, 25g TRIS was added and the mixture was heated to 180°C. After \( \frac{1}{2} \) h, vacuum was applied to remove the reaction water. After 12 h the mixture was cooled and a polymer with an acid value of 14 mg KOH/g was obtained.

Example 5
Synthesis of a condensation polymer comprising a group (I) wherein A is ethylene \( R^1 \) to \( R^6 \) are hydrogen, \( n, m, o = 1 \) and wherein \( X^1 \) is methyl and at least one \( X^2 \) or \( X^3 \) is a group \(-O-CO-CH_2CH_2-COOR^{10}\) wherein \( R^{10} \) is a polyethyleneoxide group

312g of polyethyleneoxide-monomethylether (MW=750) was added to a glass reactor equipped with stirrer and condenser, and which can be heated by oil. Next 68g succinic anhydride was added and the mixture was slowly heated to 120°C. 1 h after the start, 37g 2-amino-2-ethyl-1,3-propanediol was added and the mixture was heated to 180°C. After \( \frac{1}{2} \) h vacuum was applied to remove the reaction water. After 12 h the mixture was cooled and a polymer with an acid value of 17 mg KOH/g was obtained.
Example 6
Synthesis of a condensation polymer comprising a group (I) wherein at least one $X', X^2$ and $X3$ is an imidazolino group.

246g of TRIS, 170g of succinic anhydride and 184g imidazole were added to a glass reactor equipped with stirrer and condenser, and which can be heated by oil. The mixture was slowly heated to 180°C and 2 h later vacuum was applied to remove the reaction water. After 5 h the mixture was cooled and a glassy polymer with an acid value of 10 mg KOH/g was obtained. The ratio of imidazolino end groups to hydroxy end groups in the condensation polymer is approx. 70 wt% to 30 wt%.

Example 7
Synthesis of a condensation polymer comprising a group (I) wherein A is ethylene and 1-dodeceny lethylene (1:1), $R^1$ to $R^6$ are hydrogen, $n, m, o = 1$ and wherein at least one $X'$, $X^2$ or $X3$ is a group –O-CO-$R^7$ wherein $R^7$ is derived from coconut fatty acid

183g of dodeceny succinic anhydride, 169g of succinic anhydride, 141g coconut fatty acid and 208g of TRIS were added to a glass reactor equipped with stirrer and condenser, and which can be heated by oil. The mixture was slowly heated to 180°C and 2 h later vacuum was applied to remove the reaction water. After 5 h the mixture was cooled and a polymer with an acid value of 9 mg KOH/g was obtained. The ratio of coconut fatty acid end groups to hydroxy end groups in the condensation polymer is approx. 25 wt.% to 75. wt%.

Example 8
Synthesis of a condensation polymer comprising a group (I) wherein the N-methyl piperazine endgroups are quaternized.

50g of the polymer of example 2 was dissolved in 50g water and at room temperature 24.2g of dimethyl sulphate was slowly added. First the mixture was turbid but within 10 min the temperature raised to about 50°C and the mixture became clear. After 24 h the fully quaternized polymer solution was ready for use.

Example 9
Synthesis of a condensation polymer comprising a group (I) wherein the dimethyl aminopropyl end groups are quaternized.

50g of the polymer of example 3 was dissolved in 50g water and at room temperature 21.9g of dimethyl sulphate was slowly added. First the mixture was
turbid but within 10 min the temperature raised to about 50°C and the mixture became clear. After 24 h the fully quaternized polymer solution was ready for use.

Example 10

Synthesis of a condensation polymer comprising a group (I) wherein A is 1,2-cyclohexyl, R¹ to R⁶ are hydrogen, n, m, o = 1 and wherein at least one X¹, X² or X³ is a group wherein at least one X¹, X² or X³ is a group \(-\text{O-CO-}R⁷\) wherein R⁷ is derived from sunflower fatty acid.

184g of hexahydro phthalic anhydride, 106g diisopropanol amine and 73g of TRIS are added to a glass reactor equipped with stirrer and condenser, and which can be heated by oil. The mixture is slowly heated to 160°C and next 336g sunflower fatty acid is added, 2 h later vacuum is applied to remove the reaction water. After 5 h the mixture is cooled and a polymer with an acid value of 6 mg KOH/g is obtained.

The hydroxypropyl cellulose is first dissolved in half of the alcohol and is subsequently charged with aminomethylpropanol. The other components, with exception of the acrylate resin, are dissolved in alcohol and this solution is added under agitation to the hydroxypropyl cellulose followed by the addition of the acrylate resin.

Add all ingredients of part 1 and mix intensively until a homogeneous gel is obtained.
What is claimed is:

1. Compositions for application in personal care, home care or fabric care comprising an effective amount of a condensation polymer carrying at least two

groups of the general formula (I)

\[
\begin{array}{c}
\text{O} \\
\text{N} \\
\text{C} \quad \text{C} \\
\text{H} \\
\text{C} \quad \text{C} \\
\text{A} \\
\end{array}
\]

\[
\left[ \text{R}_1^{\delta} \text{C} \quad \text{R}_2^{\delta} \right]_m 
\]

\[
\left[ \text{C} \quad \text{R}_3^{\delta} \quad \text{R}_4^{\delta} \right]_n 
\]

\[
\text{X}^1 \quad \text{X}^2 \quad \text{X}^3
\]

wherein

the free bond extends to the polymer backbone;

A is an, optionally substituted, (C\_6-C\_24) aryldiradical or an, optionally substituted,

(C\_7-C\_24) (cyclo)alkyldiradical,

R\^1 to R\^6 are, independently of each other, hydrogen, C\_1-20 -alkyl, C\_3-7 -cycloalkyl or C\_6-10 -aryl;

X\^1, X\^2 and X\^3 are, independently of each other, hydrogen, hydroxy, C\_1-20 -alkyl,

C\_1-20 -alkoxy, C\_3-7 -cycloalkyl, C\_6-10 -aryl or a group -O-CO-R\^7, -O-CO-A-CO-N(R\^8,R\^9), -O-CO-A-CO-OR\^10, or -NHet;

R\^7 is C\_1-20 -alkyl, C\_3-7 -cycloalkyl, C\_6-10 -aryl, or a radical of a polymer or an oligomer;

R\^8 and R\^9 are, independently of each other, (C\_1-20) -alkyl or (C\_6-10) -aryl groups;

or (C\_1-20) -alkyl or (C\_6-10) -aryl groups substituted by a group containing at least one hetero atom or

R\^8 and R\^9 together with the nitrogen atom to which they are attached form a 5 or 6

membered ring wherein optionally one or several C-atoms are replaced by –

NH, -N-(C\_1-20) -alkyl, -N-aryl, -O- or -S-;

R\^10 is C\_1-20 -alkyl, C\_3-7 -cycloalkyl, or C\_6-10 -aryl or a radical of a polymer or an oligomer;

NHet is, independently of each other, a mono-, bi- or multicyclic nitrogen containing heterocycyl group attached via a nitrogen atom to the polymer which may be aromatic or partly or completely hydrogenated and may contain additional heteroatoms such as nitrogen, oxygen or sulfur and which

may optionally be substituted; and

n, m, o are, independently of each other, an integer of 1 to 4, preferably n, m and
o are equal to 1.

provided that no more than one of \(X^1, X^2\) and \(X^3\) is hydrogen, \(C_{1-20} -\text{alkyl}, C_{3-7} -\text{cycloalkyl},\) or \(C_{6-10} -\text{aryl};\)

and wherein nitrogen containing groups may be quaternized or protonated.

2. Compositions as in claim 1 wherein in the condensation polymer at least one group of the general formula (I) is present wherein \(R^1\) to \(R^8\) are hydrogen.

3. Compositions as in claim 1 or 2 wherein one of \(X^1, X^2\) and \(X^3\) is methyl.

4. Compositions as in claim 1 or 2 wherein in the condensation polymer at least one group of the general formula (I) is present wherein at least one of \(X^1, X^2\) and \(X^3\) are hydroxy.

5. Compositions as in claim 1 wherein in the condensation polymer at least one group of the general formula (I) is present wherein at least one of \(X^1, X^2\) and \(X^3\) is \(-O-CO-R^7\).

6. Compositions as in claim 5 wherein \(R^7\) is \(C_{1-20} -\text{alkyl, preferably 2-ethylhexyl.}\)

7. Compositions as in claim 1 or 2 wherein in the condensation polymer at least one group of the general formula (I) is present wherein at least one of \(X^1, X^2\) and \(X^3\) is \(-O-CO-A-CO-N(R^8,R^9)\).

8. Compositions as in claim 7 wherein \(R^8\) and \(R^9\) are \(-\text{di-}(C_{1-20}-\text{alkyl})\text{amino-}\text{C}_{1-20}-\text{alkyl groups.}\)

9. Compositions as in claim 7 wherein \(-N(R^8,R^9)\) is a 5- or 6-membered \(N\)-heterocyclic ring.

10. Compositions as in claim 9 wherein the 5- or 6-membered \(N\)-heterocyclic ring is \(N\)-methyl piperazino or morpholine group.

11. Compositions as in claim 1 wherein in the condensation polymer at least one group of the general formula (I) is present wherein at least one of \(X^1, X^2\) and \(X^3\) is \(-O-CO-A-CO-OR^{10}\).
12. Compositions as in claim 11 wherein R\(^{10}\) is polyethyleneoxide methyl ether, polypropyleneoxide methyl ether and/or polytetrahydrofurane.

13. Compositions as in claim 1 wherein in the condensation polymer at least one group of the general formula (I) is present wherein at least one of X\(^{1}\), X\(^{2}\) and X\(^{3}\) is -NHet.

14. Compositions as in claim 13 wherein -NHet is, independently of each other, a mono-, bi- or multicyclic nitrogen containing heterocyclcyl group attached via a nitrogen atom to the polymer which may be aromatic or partly or completely hydrogenated and may contain additional heteroatoms such as nitrogen, oxygen or sulfur and which may optionally be substituted.

15. Composition as in claim 14 wherein -NHet is a imidazolino group.

16. Compositions as in any one of claims 1 to 15 wherein the condensation polymer is one which is obtainable by polycondensation of a compound of the general formula (II)

\[
\begin{align*}
H_2N & \xrightarrow{\text{C}} C & \left[ R^1 \xrightarrow{\text{C}} R^2 \right]_n \\
& & \left[ R^5 \xrightarrow{\text{C}} R^6 \right]_m \\
X^{11} & & X^{21} \\
X^{31} & & \text{Formula (II)}
\end{align*}
\]

wherein R\(^{1}\) to R\(^{6}\) and n, m and o are as defined earlier in formula (I) and X\(^{11}\), X\(^{21}\) and X\(^{31}\) have the same meaning as X\(^{1}\), X\(^{2}\) and X\(^{3}\) in formula (I) as defined earlier, provided that at least one of X\(^{11}\), X\(^{21}\) and X\(^{31}\) is hydroxy, and further provided that no more than one of X\(^{11}\), X\(^{21}\) and X\(^{31}\) is hydrogen, C\(_{1-20}\) -alkyl, C\(_{3-7}\) -cycloalkyl, or C\(_{6-10}\) -aryl;

with a dicarboxylic acid of the general formula

\[ A(\text{COOH})_2 \] (III)

or the cyclic anhydride thereof wherein A has the same meaning as in formula (I) as defined earlier; and, optionally,

an acid of the general formula
R⁷COOH (IV)
and/or a dialkylamine of the general formula
HN(R⁸,R⁹) (V),
and/or an alcohol of the general formula
R¹⁰OH (VI)
and/or a heterocycle of the general formula
H-NHet (VII)
wherein R⁷, R⁸, R⁹, R¹⁰ and -NHet have the same meaning as in formula (I) defined earlier and optionally, quaternization or protonation of a nitrogen group contained in the condensation polymer obtained.

17. Compositions as in claim 16 wherein at least one additional alkanolamine according to formula (VIII):

![Formula VIII]

in which:

Y is or a linear, branched or cyclic (C₁-C₂₀) alkyl group;
R¹², R¹³, R¹⁴, R¹⁵, R¹⁶, R¹⁷ and R¹⁸ are, independently of each other a hydrogen atom, (C₆-C₁₀) aryl groups, (C₁-C₈) alkyl groups or CH₂OH
and p and q are an integer from 1 to 4, preferably, p and q are 1 is used in the polycondensation process.

18. Condensation polymers carrying at least one group of the general formula (I) as defined in claim 1, wherein X¹, X² and X³ are, independently of each other, a group -O-CO-A-CO-N(R⁶,R⁸), -O-CO-A-CO-OR¹⁰, or -NHet; and R¹ to R⁶, R⁸, R⁹, R¹⁰ and -NHet are as in claim 1, and wherein nitrogen groups contained in a condensation polymer of formula (I) may be quaternized or protonated.
19. The condensation polymers of claim 18, wherein $X^1$, $X^2$ and $X^3$ are, independently of each other, a group -O-CO-A-CO-N(R^8,R^9).

20. The condensation polymers of claim 19, wherein $R^5$ and $R^9$ are di-(C_{1-20} – alkyl)amino-C_{1-20} – alky groups.

21. The condensation polymers of claim 19 wherein -N(R^8,R^9) is a 5- or 6-membered N-heterocyclic ring.

22. The condensation polymers of claim 21, wherein -N(R^8,R^9) is N-methyl piperazino or morpholine group.

23. The condensation polymers of claim 18, wherein $X^1$, $X^2$ and $X^3$ are, independently of each other, a group -O-CO-A-CO-OR^{10}.

24. The condensation polymers of claim 23, wherein $R^{10}$ is polyethyleneoxide, polypropyleneoxide methyl ether and/or polytetrahydrofurane.

25. The condensation polymers of claim 18, wherein $X^1$, $X^2$ and $X^3$ are, independently of each other, a group -NHет.

26. The condensation polymers of claim 25 wherein -NHет is a mono-, bi- or multicyclic nitrogen containing heterocycyl group attached via a nitrogen atom to the polymer which may be aromatic or partly or completely hydrogenated and may contain additional heteroatoms such as nitrogen, oxygen or sulfur and which may optionally be substituted.

27. The condensation polymers of claim 25 wherein -NHет is an imidazolino group.

28. A condensation polymer as in any one of claims 18 to 27 which is obtainable by polycondensation of a compound of the general formula (II)
wherein $R^1$ to $R^8$ and $n$, $m$ and $o$ are as defined earlier in formula (I) and $X^{11}$, $X^{21}$ and $X^{31}$ have the same meaning as $X^1$, $X^2$ and $X^3$ in formula (I) as defined earlier, provided that at least one of $X^{11}$, $X^{21}$ and $X^{31}$ is hydroxy, and further provided that no more than one of $X^{11}$, $X^{21}$ and $X^{31}$ is hydrogen, $C_{1-20}$-alkyl, $C_{3-7}$-cycloalkyl, or $C_{6-10}$-aryl; with a dicarboxylic acid of the general formula

$$A(COOH)_2$$

(III)
or the cyclic anhydride thereof wherein $A$ has the same meaning as in formula (I) as defined earlier; and, optionally, a dialkylamine of the general formula

$$HN(R^8R^9)$$

(V), and/or an alcohol of the general formula

$$R^{10}OH$$

(VI) and/or a heterocycle of the general formula

$$H-NH_{het}$$

(VII) wherein $R^8$, $R^9$, $R^{10}$ and $NH_{het}$ have the same meaning as in formula (I) as defined earlier, and optionally, quaternization or protonation of a nitrogen group contained in the condensation polymer obtained.

29. Condensation polymer as in claim 28 wherein at least one additional alkanolamine according to formula (VIII):

$$_{25}$$

Formula VIII

in which:
\[
\begin{align*}
Y \text{ is} & \quad \text{or a linear, branched or cyclic (C}_1\text{-C}_{20}) \text{ alkyl group}; \\
R^{12}, R^{13}, R^{14}, R^{15}, R^{16} \text{ and } R^{17} & \text{ are, independently of each other a hydrogen atom,} \\
(C_6\text{-C}_{10}) \text{ aryl groups, (C}_1\text{-C}_9 \text{) alkyl groups or CH}_2\text{OH} \\
\text{and } p \text{ and } q & \text{ are an integer from 1 to 4, preferably, } p \text{ and } q \text{ are 1} \\
is used in the polycondensation process.
\end{align*}
\]

30. Hair care preparations comprising a composition of any one of claims 1 to 17.

31. Compositions according to any one of claims 1 to 17, wherein the condensation polymer has a weight average molecular mass between 600 g/ mol to 50'000 g/ mol, more preferably between 800 g/ mol and 25'000 g/ mol.

32. Compositions according to any one of claims 1 to 17, wherein the average number of end groups \( X^1, X^2 \) and/or \( X^3 \) per molecule of condensation polymer is between 2 and 250, more preferable between 3 and 50.

33. A condensation polymer according to any one of claims 18 to 29, having a weight average molecular mass between 600 g/ mol to 50'000 g/ mol, more preferably between 800 g/ mol and 25'000 g/ mol.

34. A condensation polymer according to any of claims 18 to 29, having an average number of \( X \) end groups per molecule of condensation polymer between 2 and 250, more preferably between 3 and 50.
